Contractor Is Liable For Defective Building

Generally speaking, a contractor who fails to construct a building according to plans and specifications is liable in damages to the owner. The amount of the damages depends entirely upon the extent of the defective construction, says The Contractor.

For instance, in *Mahan v. Springer*, 283 Pac. 667, it was shown that an owner and a contractor entered into a contract by the terms of which the latter agreed to construct a concrete building according to plans and specifications for \$40,500.

After completion of the building the owner filed suit to recover damages from the contractor alleging that the concrete in the building had not been properly mixed; that the water-proofing provided for in the plans and specifications had not been applied as therein provided; that certain floors had not been laid in accordance with the specifications; that the windows had not been constructed in accordance with the plans; that the painting job was improper; that the glass was not double strength glass as provided for in the contract; and generally the building had been poorly constructed instead of being constructed in accordance with the plans and specifications which called for the erection of a first-class building.

The lower court held the contractor liable for \$2000, the difference in the value of the building as it was constructed and as it should have been constructed according to the plans and specifications. The contractor appealed to the higher court which sustained the verdict, and said:

"Where there is a substantial compliance with the contract in cases of this kind, the measure of damages to the owner is what it would cost to remedy these defects; but where there is not a substantial compliance and where, to remedy the defects, it is necessary to tear down and rebuild large portions of the structure, the measure of damages is the difference between the value of the building as constructed and its value if it had been constructed in accordance with the contract."

STRUCTURAL STEEL IN JULY

New orders of fabricated structural steel in July, as reported to the U. S. Department of Commerce by the principal manufacturers were 71 per cent of capacity as compared with orders of 63 per cent of capacity in June, and 91 per cent in July, 1929, 77 per cent in July, 1928, and 91 per cent in July, 1927. Shipments of fabricated structural steel in July represent 76 per cent of the capacity of firms reporting this item as against 75 per cent in June, 79 per cent in July, 1929, 68 per cent in July, 1928, and 68 per cent in July, 1927.

REINFORCING STEEL STANDARD ADOPTED

The California State Chamber of Commerce, through its Statewide Committee on Simplified Practice, has secured the co-operation of the 15 reinforcing steel firms of this State in reducing the 22 sizes and three grades of reinforcing steel to 11 sizes and one grade, effective September 1, 1930, in accordance with the recommendation of the Simplified Practice Division of the U. S. Department of Commerce.

Benefits to be derived from this simplification are stated by Charles M. Gunn, vice-chairman Simplified Practice Committee, State Chamber of Commerce, to be as follows: Reduction in amount of stocks necessary to be carried by steel mills and jobbers; Reduction in the number of sets of rolls to be kept in repair by steel mills; Reduction of the changes of rolls in the steel mills, resulting in a saving of time; Quicker turnover of stock on hand; Maximum promptness in delivery.

In the East, according to a report submitted to the U. S. Department of Commerce by the Industry, average stocks of reinforcing bar distributors have been reduced from 175,000 tons to 61,000 tons, with a resulting release of capital investment totaling \$4,500,000.

By the general adoption of this standard, it is estimated that the 15 reinforcing steel firms in California will carry approximately 7,500 tons of reinforcing steel, which means that \$330,000 less capital will be tied up in inventory per year, as compared to the former practice involving 22 sizes and 3 grades of reinforcing steel. This does not include the saving to the steel mills in inventory or operation, it is stated.

Other projects of simplification that are being undertaken by the California State Chamber of Commerce include: Pole line hardware; Simplified invoice; Bank checks; Common brick; Standard specifications, standard patterns and standard sales agreement for California foundries; Lumber; Warehouse forms; Wooden boxes and containers; Structural steel.

PROTESTS FREIGHT RATE

Pacific Coast Steel Corporation, with headquarters at San Francisco, has filed a complaint with the State Railroad Commission against Southern Pacific Company alleging that defendant carrier collected unlawful charges for the transportation of 181 carloads of steel from South San Francisco to Los Angeles during the last three years. Complainant asks the Commission to award reparation to the amount of the difference between the rate of 25 cents per 100 pounds collected by defendant carrier, and a rate of 21½ cents per 100 pounds as shown in a tariff authorized by the Commission.

Contractor's Release Does Not Stop Sub's Lien, Court Rules

It is important to know that ordinarily the fact that a principal contractor signs a paper releasing the owner from a mechanic's lien does not invalidate the sub-contractor's liens. So held the higher court in *Boulia-Gorrell Co. v. East Coast Realty*, 118 Atl. 28, says The Contractor.

In this case an owner engaged a principal contractor to construct a building. Soon afterward the owner mortgaged his property and the principal contractor signed a release from any mechanic's lien. One of the sub-contractors performed some work and soon thereafter he learned that the principal contractor had signed the release. When the sub-contractor had completed his work he was compelled to file a mechanic's lien to secure payment for his services.

The counsel for the owner argued that knowledge, on the part of the sub-contractor, that the principal contractor had signed the release barred the sub-contractor from obtaining a lien. However, the court held the sub-contractor entitled to a lien, and said:

"The release was not given until the plaintiff (sub-contractor) has partly performed its contract, and there is nothing to show that it had any knowledge of the release before its performance was fully completed. . . In this situation the claim that the lien was lost through Benoit's (principal contractor's) release of his lien is based upon a theory that the plaintiff's (sub-contractor's) lien was derived from and depended upon Benoit's and that whatever Benoit did to invalidate his lien had a like effect upon the plaintiff's. . . To deny the sub-contractor his lien for any other reason than the owner's freedom from debt to the contractor would lead to the singular absurdity that one person might defeat and destroy another person's property interests at his pleasure."

CALIFORNIA IS ACTIVE IN HIGHWAY BUILDING

Highway construction throughout the United States has been increased fully 100 per cent this far this year as compared with 1929, according to Secretary of Commerce Lamont who bases his report on data received from the governors of 35 state awarding highway contracts awarded for the first three months of this year. These amounted to \$114,101,383, as compared with \$50,910,133 in the same period of 1929, a net increase of 124 per cent. California's increase was 181 per cent.

STATE AND NATIONAL ASPECTS OF THE SAFETY CODE MOVEMENT

By P. G. Agnew, Secretary American Standard Association

At the convention of your Association in Toronto last year, Lewis A. DeBlois, Director of the Safety Engineering Division of the National Bureau of Casualty and Surety Underwriters, discussed the "Necessity for Safety Standardization." The discussion of Mr. DeBlois' paper and the increased interest in safety code development work manifested during the past year by several states which heretofore had not been active in this work seem to justify a further discussion of national codes. In this, particular attention will be paid to the relation of national codes to state regulatory work and to the desirability of the State Commissions taking a more active and responsible part in the development of the national codes.

In order to save as much time as possible for the discussion which is to follow, I will not enter into the details of the American Standards Association, under whose auspices the national codes are being developed, or of the functions of the technical committees in charge of the individual codes. I have prepared a statement on this point which, it is hoped, may appear in the proceedings as a part of this paper. I might not be amiss, however, to touch briefly upon the organization of a technical committee and its work of developing a safety code.

A joint technical committee is in charge of each national code. It is made up of representatives of interest broadly classified as follows:

Manufacturers (Makers of equipment)

Employers (Purchasers, owners, users of the equipment)

Employees

Governmental Bodies having regulatory power, or influence over the field in question

Specialists, such as staff representatives of technical societies, consulting experts with no exclusive business affiliation, and college professors

Insurance representatives.

This representation insures that all interests in any way concerned with the project have a voice in its development. It is the same group classification as that which is in general use by states that have been developing safety codes, and has proved satisfactory to them. Generally speaking, individuals on the committee do not serve as individuals but as representatives of national associations, so that the committee is truly national in scope, and the membership of the association, through its official organs, is kept constantly in touch with the development of the project.

It will be noted that state regulatory bodies, such as labor departments, are given a definite place in committee representation. This representation is individual, or through such organizations as the Association of Government Officials in Industry or the International Association of Industrial Accident Boards and Commissions. The policy has been definitely established that any state that so desires, regardless of any representation that it may have through either of the organizations mentioned, may have membership on technical

Paper presented before the Annual Convention of the Association of Government Officials in Industry, at Louisville, Ky., May 22, 1930

committee. The A.G.O.I. now have representatives serving on about twenty technical committees, which indicates that it is the policy of this Association to co-operate very extensively in the development of national safety codes.

The technical committees elect their own chairmen and secretaries and proceed to develop a code that will cover the scope previously laid down. The committee is free to obtain and use any advice that it can get to enable it to complete its work, and in many cases organizes subcommittees composed of persons who are not members of the main technical committee. The final draft of the code is submitted to the entire membership of the technical committee for approval. If approved it is sometimes printed and widely distributed for criticism, and sometimes it is submitted without further delay, through the sponsor body, to the American Standards Association for approval. The ASA takes formal action only when it is satisfied that all interests in any way affected by the code have had ample opportunity to participate in its development, and that the completed document represents a real national consensus.

Example of Safety Code Procedure

As an example of this standardization method of arriving at a national consensus, let us choose a specialized but relatively simple industrial problem—the protection of workmen in the use of grinding wheels.

The work of formulating a safety code on the subject was carried out by a joint committee made up of representatives of all interested groups: the manufacturers, through their national trade association; regulatory bodies having authority over safety matters in the industries, through their national associations; employing groups which are users of grinding wheels, through their trade associations; casualty insurance companies, through their two national organizations; the workmen whom the code is designed to protect, this representation being arranged through the U. S. Department of Labor; national engineering societies; technical bureaus of the federal government; and independent specialists.

In all, seventeen national organizations are represented on the joint committee, which has thirty members. After two years of painstaking work, unanimous agreement upon a complete code was reached. This was not accomplished, however, without encountering some serious difficulties and difference of opinion.

The code covers the general safety requirements to be met in the construction, care, and use of grinding wheels. It is recognized as the authoritative guide to the industry, and is being legally adopted by the various state commissions.

The procedure followed in connection with the development of the code has recently been followed in its re-

vision. Revision was undertaken as a result of information presented to the ASA by an important national trade association, and extensive tests and experiments were made before the committee agreed to include in the revised code the results of these investigations. These methods have been perfected as a result of ten years' experience in the development of national safety codes.

A short time ago it was felt that it was time to take stock so as to determine to what extent the work was serving the various groups affected. This stocktaking showed definitely that the national program had become well established; that much excellent work in the development of codes had been done; that some of the codes, such as the Safety Code for Elevators and Escalators, and the Safety Code for Abrasive Wheels, had practically reached the status of a "Bible" in their respective industries; but that much yet remained to be done in furthering the use of completed codes and speeding up the work on the codes in process of development.

A general strengthening of safety code work was considered necessary, and in the main this is being concentrated in the work of two committees. These are the Committee on Promotion of the Use of Codes in Industry, and the Committee on Scope. In general, these two committees will be responsible for the planning, stimulation, and carrying out of methods for bringing codes into general use by making them part of the regular operation of industrial concerns. They will also consider the need for revision, the question of the development of new codes, and the correlation of codes, so that in their published form they may be more effective instruments than would otherwise be the case.

To assist in carrying out this program, a safety engineer was added to the staff on the ASA—a man schooled in safety work in industry, and with an extensive experience in the department of labor of one of the large industrial states.

I have gone into these details in order to emphasize the desire of the ASA to be of service, and to draw forth, either in the discussion or by personal suggestion, your ideas as to how this service may be most effectively rendered.

Regulation Versus Legislation

Some of the states are not permitted by the laws under which they operate to administer safety codes in their accident prevention work. These, and other states which do so by preference, work under direct legislative acts. This situation is one which deserves careful study. It has a vital relation to the national safety code program. The experience of states co-operating in the national safety code work indicates several very definite advantages in the use of the regulatory as compared with the legislative method:

1. Accident prevention work is placed in the hands of a specialized body. It is only proper that those who are confronted daily with the problem of preventing accidents should be entrusted with the duty of preparing the complete plans and putting them

into effect. In legislation, the ultimate decision is necessarily in the hands of a body whose members themselves cannot have an adequate knowledge of the intricacies of the subject with which the legislation deals. Consequently, it not infrequently gets distorted in the larger game of partisan politics.

2

Participation of industry in the development of an accident prevention program is secured. Not only does industry welcome the opportunity to assist in the development of safety regulations, but through this contact it also becomes awakened to the general accident situation and is ready and willing to offer constructive suggestions for the working out of a comprehensive program. I believe that in particularly every case where a state has entered upon an active safety code development program it has eventually instituted a general program covering all phases of accident prevention work.

3

Legislation must be enforced as written. Nowhere do the basic laws of the various states give executive departments the right to decide what sections of the laws shall be enforced.

Regulations, on the other hand, may be enforced in such a way as to meet specific conditions. For example, in the State of New York certain procedure in regard to variations has been established under which the Industrial Board, upon petition, may, of the facts so warrant, make a variation from a particular rule to meet a specific condition in the establishment of the petitioner, which will also apply to all establishments with the same specific conditions. This flexibility of procedure and enforcement secures a maximum compliance without hardship and promotes the goodwill of industry toward the department responsible for safety work.

4

Regulations may be amended or repealed whenever conditions warrant. Experience gained through the enforcement of regulations frequently shows the necessity for changes. Regulations may be revised without difficulty; the law cannot, however, be said of legislation. Legislation is dependent on the whims of the legislature, and several years may pass before it is possible to obtain the amendments needed.

An example of the impracticability of including detailed specifications in legislation is found in certain provisions of the mining law of the state of Pennsylvania. The law in question specifies in some detail how blasting shall proceed. It provides that the hole shall be filled, leaving no air voids. Research in the course of the last few years has shown it to be desirable to have a certain amount of air void, since this "eases off" the explosion, and the danger of falling rocks is thereby reduced. It also results in 2 per cent more salable coal. Here we have a case of a law prohibiting a practice which prevents accidents and is of considerable economic value. If the same condition existed in a safety code, it could be amended without delay, while several sessions of the legislature may pass before the law can be changed.

Value of National Codes

Assuming that it is true that the adoption of regulations by labor departments in accident prevention work is highly desirable, what advantages may be derived from the use of national safety codes as the basis of state regulations? Several very definite points emphasize such

advantages to labor departments that have been engaged in the development of safety codes for some time, and even more, to departments whose budgets do not permit their retaining the staff necessary to carry on such work.

It has been pointed out that regulatory bodies have direct representation on technical committees, and that they are also represented through the Association of Governmental Officials in Industry and the International Association of Industrial Accident Boards and Commissions. As already stated, the former is now represented on about twenty technical committees, and the latter is represented on about thirty. The national safety codes will be prepared in a form acceptable to regulatory bodies; that they will admit of enforcement; and that they may be applied with the least possible friction is assured by such representation. In other words, the provisions of national safety codes are not so drastic that industry would protest their enforcement, nor are they so weak or general that the regulatory body would find it necessary to spend considerable time in redrafting their provisions to render them effective.

The careful selection of the members of the technical committees, particularly as to their experience, is one of the safeguards insuring the correctness of the codes. A very definite effort is made to secure individuals of the widest possible experience for service on the committees. Also, the best literature available is obtained for their use. This point is important particularly to regulatory bodies which, through limitation of funds, may be unable to employ adequate technically trained staffs to conduct the research and investigation necessary to the development of a correct code. The wide distribution of tentative drafts for the securing of criticism, and their reference to regulatory bodies for public hearings, brings to the ASA a wealth of information that is incorporated in the code before the final draft is completed.

The national codes naturally are far from perfect. Like codes developed by individual states, they need amending from time to time in the light of new information, but at the time they are developed, the national codes represent the best in thought and practice.

Another advantage in using national codes lies in the fact that they may be adopted with a minimum of opposition. Any state starting a safety code program is bound to meet with a certain amount of opposition from unformed local industries. Some of them have the misperceived notion that the Department of Labor through the enforcement of the code will operate in such a manner as to cause the industries endless embarrassment and hardship. The organization of the technical committees and the In-

(Continued on page 6)

fluence of national trade associations through their membership on technical committees tend to minimize the possibility of such misunderstanding in regard to individual codes. Most industries that will take the trouble to be represented at public hearings and present their constructive criticism are interested enough in their own self-advancement to be members of national trade associations, and through such associations they receive information concerning the codes which the associations have assisted in developing.

National Codes Insure Uniformity

The Industries have learned that through the co-operative effort of the various groups concerned they may establish national standards that will benefit all the groups affected. This viewpoint, which is becoming more widespread every day, tends largely to remove objections to the adoption of national codes by regulatory bodies.

The adoption of safety codes by the regulatory bodies does not end the service which the ASA is able to render. A definite policy has been established which will enable the ASA to ensure uniformity in interpretation and adaptation of specific requirements of the codes. In some cases, the technical committees are held in part for the purpose of making periodic revisions. In other cases, the main committee is disbanded, and a committee on interpretation is appointed which may be called upon for information concerning the interpretation of specific requirements and practical methods of applying the provisions to specific conditions. This service has not yet been developed to the fullest extent of its possibilities, and such service must be expanded if for no other reason than to obtain the uniformity intended in the establishment of national codes. The use of this service can be of great advantage to labor departments. The administrative knowledge and experience of the various departments using the codes may thus be pooled, and the ASA will become the clearing-house for information on this point.

One of the greatest factors in the accident prevention movement today is the insurance business. Personally, I admire the effort of these organizations. Years of contact with executives of companies engaged in this work have led me to the conclusion that they not only consider it good business but that they are genuinely interested in it as a service to humanity. Every labor department in its enforcement is bound to come in contact with the representatives of insurance companies. Hence the field work of the department using the national codes as a basis for state regulations is greatly simplified through the policy that has been established by the stock and mutual companies of bringing their schedules into conformity with the national safety codes. This means that the labor departments will obtain considerable assistance, both direct and indirect, from the inspection service of the insurance companies in obtaining compliance with the state regulations.

State Cooperation Urged

If time permitted, other advantages in the use of national codes could be presented, but before closing I want to discuss with you another question, namely, the desirability of a more extensive and intimate co-operation of the states in the development of national codes.

In discussing the organization of a technical committee, I mentioned the established policy that regulatory bodies can secure membership on technical committees. The fact is, however, that less than a dozen states have borne the burden of maintaining the labor department point of view in the development of national codes. The representatives of these states have served with fidelity, and I am glad to have the opportunity of publicly thanking them on the part of the ASA for the great service they have rendered in the development of the safety codes that are already recognized as American Standard.

THE OBSERVER

What He Hears and Sees on His Rounds

I am sure that these gentlemen will agree that in rendering this service they have received a fund of information that has been of great value to them. I am also sure that they will agree that the national codes would be stronger than they are if many more of the states would take an active part in their development.

It is realized that inasmuch as the headquarters of the SAS are located in New York, with the result that most of its meetings are held in that city, it is difficult and very costly for many of you to attend the committee meetings. The ASA is so desirous of securing your advice and help that it will welcome your service on the committee by correspondence if you find you cannot attend the meetings in person.

The representatives of your Association serving on code committees will welcome your interest in their work. At present they serve as individuals, and their vote on approval of final drafts of codes represents their individual opinion, and not that of this Association. Your representatives have many times expressed the wish that they could in some way more truly reflect the views of the Association in their work on these committees. May I therefore suggest, in the absence of any definite procedure for instructing your representatives how to vote on the question coming before them, that you indicate to your representatives the fact that your state is interested in the code under consideration, and that you would be glad to be kept informed of the progress of the work.

It is abundantly evident that there is much to be gained in the movement for the prevention of industrial accidents by a far more intimate and active participation of the states in the national safety code program, not merely in the use of the codes in state work, but in directing policies and in the formulation of individual codes. The benefits of such co-operation will accrue to the state officials, to the industrialists, to the insurance companies and technologists, but most of all to the workman himself.

MILLWORK INSTITUTE WILL MEET IN SAN FRANCISCO

The annual meeting of the Millwork Institute of California will be held at San Francisco in November. It was decided at the triennial conference held at Pasadena.

President A. W. Bernhauer of Fresno Planing Mill, Fresno, at the Pasadena meeting, stated the Institute is being managed by the board of directors who are giving their best efforts to the Institute's program.

L. G. Sterett, manager of the service bureau, reported that he had traveled 30,000 miles in the last year in carrying on his work. Five new members were added during the last three months.

James Clynick of the Hammond Lumber Co., Los Angeles, chairman of the committee preparing the new price schedule book soon to be published, explained the schedules which will cover prices for exterior and interior trim, frames of all types, band-sawing, shaping, cabinet, turning and stair work and sand blasting. Other members of the committee are: A. J. Todhunter, Hammond Lumber Co., Los Angeles; George Kaiser, Lannon Bros., Oakland; Carl Koenig, Pacific Mfg. Co., San Francisco; and Clarence Morrison, Pacific Mfg. Co., Los Angeles.

Architects J. C. Austin and Myron Hunt, addressed the Institute praising the work which it is doing to improve and maintain the standard of the millwork.

Foreshadowing a new era of responsibility and stabilization in the construction industry, approved cooperative plans to place the financing of construction more directly upon the financial institutions of the country and to outlaw prevalent credit abuses were announced by the board of directors of the Allied Construction Industries of America at its meeting in Washington, D. C., Aug. 26.

The board completed administrative plans to carry out the program of organized groups of buyers and sellers within the industry to establish sound credit conditions and nurture responsibility by cooperative adherence to standard terms and practices, and is now ready to initiate the work.

In view of the economic importance of the plan to the entire business structure of the nation, members of the board, including Edward J. Harding, Assistant General Manager of the Associated General Contractors of America, Frank Dunning, manager of the National Building Supply Association, and Edward McDonnell, of the Contracting Plasterers' International Association, with H. E. Foreman, secretary of the board, conferred at length with officials of the Department of Justice in charge of Justice in charge of Federal anti-trust law matters.

Members of the board pointed out that credit regulation is more essential to the establishment of responsibility in the construction industry than in any other line of business, but that, due primarily to the reliance placed on the efficacy of the mechanic's lien law and intensive competition, loose and indiscriminate credits have been extended and placed on the responsible contractors in the competitive field. They contend that credit is simply and essentially a loan and that its wide extension within the industry should be sharply curbed and left to the institutions whose business is primarily to finance.

After careful consideration and discussion of all phases of the details which it had worked out, the board announced that it is convinced of the feasibility and propriety of the plan and that there is now no obstacle to its successful operation.

Promotional work in establishing throughout the country local credit bureaus, which are to cooperate on a national basis with the Bureau of Contract Information, Inc., Washington, will be started at once and with such regulations that no one will undertake to assume more liability than he has assets, responsibility will soon become an asset to the construction industry, the board states.

Standard credit terms, applicable to the various construction divisions in each city and including an automatic credit cut-off date, will be developed by the affiliated groups in every locality, with the local credit bureaus being set up to gather and disseminate information as to delinquent accounts, which will be automatically placed upon a cash basis until past due accounts are settled.

Solicitor General Thomas D. Thacher condemned the American bankruptcy law in an address before the 53rd annual convention of the American Bar Association at Chicago, August 21.

He described the law as one "perfectly designed to encourage dis-

honesty and reckless disregard of business integrity on the part of large numbers of people" and outlined what he termed were needed changes in the law.

Relating the results of an investigation in New York he said, "It was obvious that estates were badly administered, with much needless delay and wasteful expenditure of money."

"There was little benefit in the statute for the creditor and the ease with which debtors procured discharge from their debts, without investigation of the cause of their failure, seemed to encourage fraud and dishonesty in trade."

Thacher named, as three purposes which a bankruptcy law should be designed to accomplish, prompt and efficient realization, liquidation and distribution to the creditors of the commercial wreckage of the bankrupt estate; the discharge from their indebtedness of honest debtors, overwhelmed by financial misfortune through no fault of their own, and the prevention of reckless and dishonest practices in trade.

The speaker suggested it might be well for United States attorneys to assume the duties of investigating each bankruptcy and the conduct of each bankrupt.

"Spend Now—Spend Until It Hurts" is the title of a booklet by Glenn Buck, advertising counselor.

"A nation of hoarders is a poor nation always," wrote Buck, addressing producer, distributor and consumer.

"We have much because we have spent much and in the spending we have made a whole nation rich. No howling calamity in Wall Street can possibly do the harm that is bound to come if there is persistent decrease in the nation's spending. A middle-minded economist who counsels cowardly hoarding and bone-headed buying in this crisis is an enemy of the public's welfare—and is your own. If prosperity limps it has been kicked in the shins by those who have more power in their legs than in their heads."

"It is time to be extravagant—within the limits of your means. The surest way to stop other people's spending is to stop spending yourself. The disease is catching and becomes an epidemic. A million men of no faith could wreck heaven itself. Your income depends upon your output. Stop the one and the other will surely diminish."

William Green, president of the American Federation of Labor, said in a statement there had been no increase in unemployment in August, and that this fact probably "foreshadows the fall increase in industrial activity."

"While the decrease in unemployment was only three-tenths of one per cent, and therefore not enough to be apparent from our published figures," Green said, "we feel that even this small improvement is encouraging."

Green said the federation had revised its early figure of 21 per cent unemployment in July to 22 per cent, equalling the high level of the winter.

ALONG THE LINE

BUILDING OFFICIALS ANNOUNCE
PROGRAM FOR LONG BEACH MEETING

William G. Stubbs, 60, city clerk of Pacific Grove for the past two years, died at his home in that city August 18 following an illness of six months.

The architectural offices of the late William H. Crim, Jr., will continue to operate under the name of Crim, Resing and McGuinness, with headquarters at 483 Pine Street, San Francisco. Phone Davenport 1176.

Sir Aston Webb, 51, noted architect, died in London, August 21. Among Sir Aston's best known works were the new front of Buckingham Palace and the Admiralty Arch at the east end of the Mall.

William S. Hebbard, 77, Los Angeles architect, died in San Diego August 24 from a heart attack while visiting his daughter, Mrs. Rivers J. Carstarphen at Coronado. Besides his daughter, he is survived by his widow and a son, Sterling Hebbard of Beverly Hills.

A. R. McGonegal of Washington, D. C., was elected president of the American Association of Sanitary Engineers. Other new officers include Charles Henderson, Seattle, director. William Hobbs, San Francisco, was among the vice-presidents named.

Charles F. Ruggles, 84, known as the "last of the lumber barons," died at his home in Manistee, Mich., August 21. He had extensive timber interests in many parts of the United States. Although a multimillionaire, with property in California, Florida, the Carolinas and other sections of the country, his life was simple to the point of eccentricity.

Joshua Marks, well known in Los Angeles building circles, and formerly connected with Meyer & Holler, and the J. V. McNeil Company, general contractors, both of Los Angeles, has become associated with Lindgren & Swinerton, Inc., general contractors of San Francisco. Mr. Marks, as vice-president of the company and a partner in the business, will be the managing director for Southern California with offices in the Pacific Mutual Building, Los Angeles.

Following a recent conference with directors of the West Coast Association, the National Lumber Manufacturers' Association is arranging to station a field engineer under the direction of its Western Office, to develop lumber markets in the Pacific Northwest. An engineer is to be employed in the near future who will occupy space in the Portland office of the West Coast Association where his services will be available to members of the West Coast Lumbermen's Association, Western Pine Association, and individual lumbermen interested in the promotion of lumber markets in their individual territories.

Robert O. Derrick, Inc., of Detroit, Mich., has been commissioned by the Secretary of the Treasury as architect for the new post office, customhouse and courthouse to be erected in that city. The authorized limit of the cost of this project is \$5,650,000.

One of the ablest Long Beach committees ever appointed is in charge of local arrangements for the 9th annual meeting of the Pacific Coast Building Officials Conference, to be held at the Virginia Hotel, Long Beach, Calif., Sept. 25 to Oct. 4. Announcement of Paul C. Graham as general chairman is made by C. D. Walles, Jr., chief building inspector of Long Beach. Mr. Graham is vice-president of Graham Bros., dealers in rock and sand, and is second vice president of the Long Beach Chamber of Commerce.

Seven subcommittees are to handle convention details under Mr. Graham's chairmanship, with chairmen as follows:

Transportation—Robert Leebreck of Leebreck & Fisher, building materials; Men's Entertainment—James Rainey, architect, associated with W. Horace Austin, A. I. A.; Ladies' Entertainment—R. D. Van Alstine, A. S. C. E., consulting engineer; Banquet & Hotel Reservations—J. W. Black, building material dealer; Special Events—A. L. Ferver, general manager Geo. M. LaShell Co., building material supplies; Finance Committee—Chas. W. Pettifer, general contractor; Publicity—E. A. "Gene" Bradbury, manager Builders' Exchange.

Chief Building Inspector Walles is ex-officio member of all seven committees.

Registration of delegates, furnishing of programs and badges, and certain other details will be taken care of by the Chamber of Commerce. In addition, Albert S. Conner, manager of the convention bureau of the Chamber of Commerce, is in charge of sending letters and pamphlets to prospective delegates including the Conference membership, a large number of city building officials in the eleven western states, and a selected list of building material people and others. More than 600 such letters have already been mailed by the chamber of Commerce.

Prior to formal opening of the convention on Monday, Sept. 29, the executive committee will hold a meeting at 8 A. M. Following this, registration of delegates will begin at 9 A. M. Called to order by President Plummer at 10 A. M., the conference will occupy itself with preliminary business and announcements of committees, after which a luncheon is scheduled at Recreation Park. A feature of this luncheon will be the tree planting ceremony which, beginning with this year's meeting, will take place each year in the annual meeting city. A tree suitable to the locality will be planted, bearing appropriate marking to commemorate the holding of the 9th annual meeting in Long Beach.

Reconvening at the Virginia Hotel at 1:30 P. M., the delegates will hear a paper by James F. Collins, director State Department of Professional and Vocational Standards, entitled "Cooperation Between Building Departments and the State in the Licensing of Contractors." A brief symposium covering the entire Uniform Building Code with reference to enforcement is scheduled for 2:30 the same afternoon. Something new at this year's convention, the symposium will comprise six short papers, each of

which will be presented by a building inspector member of the conference, who will then open the meeting for discussion on his particular subject.

The second day, Tuesday, Sept. 30, will begin at 7:30 with one of the most popular features of the convention, a code discussion breakfast headed by Walter Putnam, superintendent of building, Pasadena, Calif.

Code changes committee work will occupy the entire remainder of the second day.

An evening trip Tuesday to the Columbia Steel Mill at Torrance is being planned for all delegates and their ladies.

Another discussion breakfast will be held on the third day, Wednesday, Oct. 1, led by J. H. Park building inspector, Compton, Calif. Mr. Park has been administering the Uniform Code in his city since December, 1928.

For the regular session on Wednesday morning two papers of exceptional interest are scheduled. The first is by H. G. Ufer, western superintendent, Underwriters' Laboratories, who has for his subject, "Methods used by Underwriters, Laboratories, Inc., in making standard fire tests." Mr. Ufer will illustrate his talk with films. The other paper, by Henry D. Dewell, consulting engineer of San Francisco, is on "Factors of safety recommended for wood construction." A recognized authority on wood construction, Mr. Dewell has recently carried on extensive research on the subject of his paper. Code committee work will be resumed at 10 o'clock, to occupy the remainder of the day until 3:30 P. M. when a trip is planned through Long Beach and San Pedro harbors and the new Ford plant.

Unique entertainment for the men is planned for Wednesday evening. The committee in charge is making every attempt to keep the details a dark secret until the evening of the entertainment.

On Thursday, Oct. 2, the third and last of the code discussion breakfasts will be held, under the able leadership of M. C. "Daddy" Woodruff, building inspector of San Jose.

An able city planner, Leonard S. Smith, former professor of city planning and highway engineering at the University of Wisconsin, will begin the regular session Thursday morning with a paper on "America's Housing Problem." Following this will be a paper on "General problems encountered by an electrical inspector," presented by James M. Evans, electrical engineer, Board of Fire Underwriters of the Pacific. This subject holds particular interest for a number of building inspectors who occupy "multiple" positions. Later in the morning a paper will be given on "Reinforced brick masonry" by Norman W. Kitch, secretary-treasurer, Clay Products Institute of California.

A. C. Horner, manager western office, National Lumber Manufacturers' Association, needs no introduction to conference members, many of whom knew him as first secretary of the conference. His paper just before noon on Thursday on the subject of "Fire districts as outlined in western cities" should be one of outstanding interest and merit.

Recommendations of the six code changes committee will be heard Thursday afternoon in code changes

and additions proposed in the reports approved by the convention will be sent out for letter ballot of the building inspector members after the convention.

The last day of the business session, Friday, Oct. 4, will be devoted for the most part to final business sessions and exhibits of building materials. Two interesting and instructive papers are also being planned for the morning sessions.

On Friday evening the Virginia Hotel will be the scene of the annual banquet, after which there will be dancing in the hotel ballroom.

The ladies' entertainment committee, under the chairmanship of R. D. Van Alstine, is planning many enjoyable events for the ladies. Tentative entertainment includes drives about the city, with luncheons, afternoon bridge parties, swimming parties, a theatre party, and a trip to Hollywood to visit the moving picture studios.

An all-day ocean trip to the world-renowned Catalina Island will take place on Saturday for all delegates and their ladies.

Proposal To Unionize Palo Alto Hospital Job Rejected By K. E. Parker

The building of Palo Alto's \$347,000 hospital being erected on the Stanford campus by K. E. Parker Company of San Francisco will continue at the hands of outside labor says the Palo Alto Times.

The fight made by local labor organizations, backed by city officials, business men and civic organizations, to secure preferential employment for Palo Alto craftsmen brought a concession from the contractor.

But the concession was rejected by local labor, which would be satisfied with nothing less than complete unionization of the job. To this the contractor would not consent.

Following a series of meetings and private conferences, K. E. Parker, head of the construction company, declared his willingness to meet the local wage scale, which is higher than that paid his "imported" crew and take on local craftsmen by a program of gradual replacement of his outsiders during the first phase of the building operations, known as the "form construction" phase, and to employ an all Palo Alto crew for the second phase.

After deliberation and consulting of advice of San Jose district officials of the union organization, the local labor representatives held out for complete unionization of the job, refusing to accept the contractor's concessions unless that boon, too, could be granted.

The building operations are progressing without the help of local men.

WILL REVIVE L. A. LUMBER DEALERS' ASSOCIATION

Renewed efforts are being made to revive the Los Angeles Retail Lumber Dealers' Association as the result of a meeting of the Southern District of the California Retail Lumbermen's Association held August 7 in Los Angeles. Dee C. Essley, manager of the state association, is devoting his time to the work of promoting a new local organization, but nothing definite has yet been accomplished.

TRADE LITERATURE

Everlastone Products Corp., 1400 Block Moreland Ave., Baltimore, Md., has issued a folder describing Everlastone Stucco, Paints, Tiles and Terrazzo, Cement and Mortar colors and Waterproofing and Cement Accelerators. This concern sells direct to the buyer.

Wilcox, Crittenden & Co., Inc., Middletown, Conn., has issued an illustrated catalog covering this company's entire line of heavy hardware for building construction.

General Electric Co., Schenectady, N. Y., has issued Bulletin GEA-823C, dealing with Atomic-Hydrogen Arc-Welding Equipment, which produces homogeneous, ductile welds on ferrous and nonferrous metals and alloys.

The use of activated carbon as a water purifier is taken up and thoroughly discussed in one chapter of a 36-page booklet by C. L. Mantell, consulting engineer, which is being distributed by the Industrial Chemical Sales Co., Inc., 230 Park Ave., New York City. In addition to water purification, other chapters relate to the use of activated carbon as a purifying agent in industrial applications.

Industrial applications of cork are discussed in great detail in a 48 page illustrated booklet issued by the Armstrong Cork Co., Lancaster, Pa.

EMPLOYMENT IN STATE IS LOWER

Employment in California is about 17 per cent lower than a year ago. The California labor market bulletin, issued by Louis Bloch, statistician in the state division of labor statistics, so indicates.

Bloch's figures for 775 establishments, exclusive of public utilities, but including all other industries, showed a figure for July 17.6 per cent lower than July, 1929, with a weekly payroll of 21.3 per cent lower. The average weekly earnings of laborers was computed to be \$29.39, a decrease of 4.5 per cent compared with a year ago.

Public utilities reports from twenty-six corporations, indicated a smaller decline in employment, amounting to 6.7 per cent, a payroll shrinkage of 3.6 per cent and an average wage gain of 2.3 per cent.

Notable employment slumps were reported by agricultural implement makers, down 43.8 per cent; sawmills and logging, down 30.3; motion picture production, down 43.2, and various branches of building material production, ranging around 20 to 30 per cent lower than a year ago.

Some increases were: Canning and packing of fish, up 52 per cent; miscellaneous food products, up 40.8 per cent, and the sugar, tobacco, beverages and glass industries all reported minor employment increases.

McKiernan - Terry Corp., 15 Park Row, N. Y. C., has issued Bulletin No. 49, more complete than any previous catalog issued by McKiernan - Terry on their line of pile hammers. Practically every form of pile driving work known is illustrated. Specifications, tables, etc., are also included.

TRADE NOTES

Ideal Floor Co. of San Francisco, capitalized for \$25,000, has filed articles of incorporation with the county clerk. Incorporators are: Janet Brodsgar, Neil J. Brodsgar and Niel A. Skow.

Wilmac Manufacturing Company has just been organized, and is manufacturing a sweeping compound, a cleanser for tile and linoleum, and a solvent for opening up pipes, etc. The concern has leased one floor at 1165 Bryant street.

Pacific Art Tile Company recently moved to San Francisco from Emeryville, and is located at 1176 Valencia Street. The company manufactures art tile for interior building purposes, and occupies one floor at the above address. Products are widely distributed over the Western States.

SIMPLIFIED INVOICE SOUGHT BY STATE CHAMBER

To bring about the general adoption of the simplified invoice in California, a statewide campaign is being conducted by the California State Chamber of Commerce, through its Simplified Practice Committee.

It has been conservatively estimated by the U. S. Department of Commerce, that the general adoption of the simplified invoice will result in a saving to American business of \$15,000,000 annually. The simplified invoice, which has been developed by the Division of Simplified Practice of the U. S. Department of Commerce, is endorsed by 38 nationally known trade and professional associations, and strongly recommended by the National Purchasing Agents Association.

The California State Chamber of Commerce, with the cooperation of the Purchasing Agents' Association of Northern California and of Los Angeles, is endeavoring to have this standard adopted by 100 firms in California during this year, according to Chas. M. Gunn, vice chairman, Simplified Practice Committee, of the State organization. At the present time, 39 California firms are on record with the Department of Commerce, as having adopted the standard, it is stated.

The simplified invoice is one of ten different items of Simplified Practice which are being undertaken by the California State Chamber of Commerce, for the purpose of placing California industry on a more stable basis of development.

W. E. BEAR COMPANY OPENS OAKLAND BRANCH

W. E. Bear Company of San Francisco announces the opening of branch offices and warehouse quarters at 1025 Fruitvale Ave., Oakland.

Bear Company is distributor for products of the Nephi Plaster & Manufacturing Company, the Utah Lime & Stone Company, Jumbo Plaster & Cement Company, Penn Metal Company and the Acme Stucco Company.

A complete line of the materials manufactured by these concerns will be carried by the Oakland branch which will sell to both the wholesale and retail trade.

Negotiations are now being made by the Bear Company for the opening of a branch at Sacramento.

STATE LICENSE BUREAU INVESTIGATORS ARE BUSY

"A check of the records of the Section of Contractors' Registration reveals that during the past months investigators in the employ of this section have averaged approximately 7000 calls a month in connection with investigations and interviews having to do with licensing and registering of contractors under the Contractors' Registration Law, which became effective August 14, 1929," it was stated by James F. Collins, director of the Department of Professional and Vocational Standards and Registrar of Contractors, in his report to the Governor's Council July 30, 1930. "The reports show that these investigators have covered an average of 28,000 miles per month in carrying out this work.

"Complete efficiency records of the work of the investigators are kept at the Sacramento offices of the Registrar and each month a copy is furnished each investigator in order to appraise him of his standing and the standing of all other members of the investigating force as to work accomplished. This system has engendered a spirit of friendly rivalry that is making for increased efficiency.

"The complaint bureau of the section held 63 conferences based on complaints lodged with the Registrar. Of these, five were settled in conference without further action being necessary, and 45 were pending settlement at the close of June. Licenses were ordered suspended in six cases and cancelled in four other cases as the result of conferences. In addition, three licenses, previously suspended, were ordered restored.

"In addition to the conferences held, with their resulting actions, five

cases were settled before reaching the conference stage. Two cases were dismissed as not coming within the jurisdiction of the department.

"Arrest was made and prosecution begun in one case involving charges against a person asserted to have operated as a contractor without a state license.

"Reference to the geographical file of the Section of Contractors' Registrations reveal some interesting figures bearing on the registration and licensing of contractors in California.

"There were on June 30, 1930, a total of 21,564 contractors duly registered and licensed throughout the state under the Contractors' Registration Law.

"Of this number, 12,589 are located in the ten counties of Southern California. And of this subtotal, Los Angeles County is credited with 9982 persons so registered and licensed.

"In San Francisco county, the records reveal, there are 1663 licentates.

"Of the total number of contractors licensed during the fiscal year ending June 30, 1930, approximately 10,700 had applied for renewal of their licenses for the next fiscal year on July 15. Applications for renewals are being received in ever-increasing volume each day and the work of issuing certificates for 1930-31 is progressing satisfactorily."

"Work of examining the applications of several thousand civil engineers seeking certification by the Board of Registration for Civil Engineers, under the law which became effective August 14, 1929, is progressing satisfactorily, the director reported. At the close of June, application blanks had been mailed out to 9550 applicants.

and irrigation, hydraulics, surveying contracts in engineering, laws, regulations, writing, property valuation, and drainage machinery and structures.

"The particular field of public administration rests upon much basic knowledge as economic, mathematical, political science, psychology, sociology, science and civics. The part of the work is also offered, therefore, in the Trojan civic center school, in mathematics, English and a logic. One aim is that a specialist in a particular technical subject may get related subjects which will enable him to become a public administrator in point of view.

Newspapers as Educators

"Years ago, in government, the public official was educated through the town meeting. Few of us appreciate the value of these early discussion groups, the opportunity they afforded for the exchange of ideas, the part they played in formulating public opinion as to standards of conduct. As the population increased, the town meeting became a thing of the past and in a certain sense the newspaper has come today to take its place.

"The present-day newspaper is probably one of the greatest forces in the education of public officials known in American history. When a man in private business makes a mistake, usually a directors' meeting is held and an attempt is made to pay off as many cents on the dollar as possible and hide the mistake. When a public official or a city manager or a department head makes a mistake, the newspapers tell the world about it. That is education! And even though it may be painful at the time, yet the good that the newspaper has done is almost immeasurable in the education of public officials. They have made the public official think about all of the influences and all of their responsibilities toward the social welfare of the people.

"Public officials, recognizing a further opportunity for education, now sit with college professors, planning in the planning of adequate training for government service, hoping to make it the highest of all callings, for it is certainly the closest to the welfare of the people.

Citizens' Business

"One of the finest things that the decade has contributed to American municipal government is the idea that business methods can be applied to the running of a municipal unit. And as the question 'is it economical?' must be answered in private business, so, in the future, must it be answered in public business.

"The average routine worker, holding an elementary position in the city or county government, finds that the technique and skill of his job are by far the largest elements in his success. In the case of the junior executive, the relative importance of the indispensable knowledge of facts, technique, and skill in his job decreases in proportion to his increasing responsibility to plan and direct the work of subordinates, and in proportion, also, to his increasing contact with the public.

"In the work of the senior executive the relative importance of the necessary facts, technique, and skill decreases markedly. And as the work of other departments is almost an absolute necessity, while approximately 50% of his success depends upon his relations with the public.

Graduate Work and Institutes

"The University of Southern California has recognized the increasing character of public administrative work, and there are now organized 4-year campus courses leading to degrees in public administration. An additional graduate-year curriculum leading to the professional degree of Master of Science in Public Administration is available to both first-

S. C. SCHOOL OF GOVERNMENT TO ENLARGE SCOPE OF STUDY

"Training for government in evening classes is provided in the School of Public Administration of the University of Southern California which will open its fall term on September 15 in the Los Angeles Civic Center with an augmented program. College classes dealing with public relations, city building code, public building management, office management and elements of reinforced concrete (the last for architects only) have been added to the 1930 fall program.

"Ideas of government today are different from the ideas of fifty years ago," Emery E. Olson, director of the school, says. "For many years our schools and universities have been providing training in practically every profession except that of government. True, some specific fields in government, such as law, engineering, and public health have received attention, but heretofore there has been practically no coordinated course which would train and equip an individual to take his place in the scheme of government of a 20th century municipality.

School Founded in 1929 by S. C.

"One reason for this lack is that only within the last fifty years has our American civilization become so largely urban as to require a technique of government all its own. The School of Public Administration of the University of Southern California was established in 1929 to meet this modern

need. Committees composed of men engaged in public business, those dealing with budgets, construction, utilities, law, health, engineering, city clerkship administration, and auditing, brought to the university their experience in these actual fields. Such public officials outlined courses, suggested material and reference sources, and although counseling with university faculty members, the content of the work is largely their own.

"Any public employee, appointee, or electee unaware of the formal, economic, cultural, and communicative channels now open to him for self-development is missing a very real opportunity toward achievement. The courses have been grouped so that by attending one night a week for two or three years a public official or a junior member of a staff may receive a certificate in his special field. Classes begin forty minutes after work is over at the end of the day (5.40 p. m.) and each class meets once a week for twelve weeks.

"Subjects included in the 1930-31 schedule are principles of public administration, criminal law administration, public finance, evidence and court procedure, organization and management in the department of water and power, police methods and practice, accounting, special improvement assessments, mechanics and strength of materials, library classification and cataloguing, water supply

and part-time students. There are also related combinations where a man may receive a certificate in public administration, having received for instance a degree in engineering, by adding the public administration courses. Social welfare courses are likewise given in connection with public administration degrees.

"For officials and employees of those towns too distant from educational centers to make regular attendance feasible, an annual intensive institute in public administration is held each spring at S. C. For three different years more than fifty cities have been represented by over 600 public officials and public service workers from the departments of city and county government. National experts in the science of government serve as special lecturers and forum leaders in the yearly institute.

"Promotional examinations find these earnest, ambitious, and energetic students of public work prepared, and self-development as well as professional improvement is stimulated in the men and women who attend the school of government of the University of Southern California, results of the first year's attendance have already proven."

JULY BUILDING PERMITS UP 2.4 PER CENT

July building permits jumped 2.4 per cent above the June totals, the Borough of Manhattan leading the country with a total of \$23,750,000, according to figures of 288 cities in the country made public by the Labor Department.

The department failed to itemize the total by cities, dividing building permits totals into geographic sections.

The permits for the 288 cities showed a building expenditure of \$164,067,963.

The increase was accounted for in a jump of 5.1 per cent for non-residential buildings, which more than offset a loss of 2.2 per cent under the June totals for residential buildings.

Middle Atlantic States led the list, with a total of \$72,244,188; East North Central States, \$29,358,413; Mountain and Pacific States, \$16,198,127; New England, \$13,926,103; South Central, \$12,676,553; South Atlantic, \$10,172,407; and the West North Central group, \$9,492,172.

OAKLAND PAVING CONTRACTS ARE CANCELLED

On the ground that patented paving was specified therein, the Oakland city council has voted to cancel contracts with the Heafey-Moore Company for paving projects involving more than \$70,000. The action was taken on recommendation of Walter N. Frickstad, city engineer. New bids will be asked on the cancelled contracts. The bids will be received on "open" specifications.

INCORPORATES

Information on the various points to be considered in buying a home will be compiled and published for public use by a special committee of the National Committee on Wood Utilization, according to a recent announcement by Robert P. Lamont, United States Secretary of Commerce. The publication will discuss the planning, designing and construction of houses costing less than \$15,000. Irving Hiett, Toledo, Ohio, past president of the National Association of Real Estate Boards, has been named a member of the sub-committee sponsoring the publication.

Contractor Entitled To Payment for Extras

While a contractor is bound to complete a contract strictly in accordance with its obligations, yet where the circumstances are such that the contractor is mistaken of his obligations and the owner actually was or should have been aware of the true circumstances the contractor is not bound to comply with the terms of the contract. Thus held the court in *Hammaker v. Schleigh*, 147 Atl. 790, says The Constructor.

This litigation involved a contract by the terms of which the contractor agreed to alter a building for \$23,500. The specifications attached to the contract were lengthy. At the beginning was the general provision that the entire work was to be constructed and finished according to the specifications and "to the entire approval and acceptance of the owner and his architect." Another portion of the specifications contained the following specification for protection against fire:

"Present building has sprinkler system. This shall be remodeled and continued to take care of the additional spaces. System shall be installed in accordance with the underwriter's rules."

The existing sprinkler system, when the contract was signed, protected four floors of the building. It consisted mainly of a number of pipes in which the water was carried throughout the building and there sprinkled when the water was automatically turned on by the melting of fuses under the heat generated by a fire.

After the contractor tore apart the sprinkler system he discovered that the pipes and other equipment was so badly rusted that the underwriter would not approve their further use. The owner demanded that the contractor supply new material and the architect stated that he would refuse to accept the work unless the contractor supplied new pipes. The contractor furnished the required new materials and sued the owner to recover extra payment. It is interesting to observe that the higher court held the contractor entitled to a recovery, saying:

"The exterior of the pipes gave no indication of a defective condition and there is no evidence that the plaintiff (contractor) knew of any fault at the time of the contract, nor that he believed that the pipes were not adequate for the proposed remodeling, and so he must be taken to have contracted upon the assumption that the pipes were suitable in quality for the specified purpose. The owner's opportunity for knowing the length of time the system had been in service, its operating condition and effectiveness, and the other factors affecting the question of its being continued in service in the remodeled system, was superior to that of the contractor. It is but reasonable to believe that the architect in specifying that the sprinkler system should be remodeled did so after investigation, full information and in the exercise in this employment of the professional skill and knowledge of an expert. In the absence of any countervailing circumstances, these facts would justify the contractor's reliance without first making an independent inquiry, upon the architect's judgment that the material specified was fit for the purpose intended."

L. A. VIADUCT BUILDING COST APPORTIONED

The State Railroad Commission has approved a new apportionment of the cost of building the Sixth street viaduct over the Los Angeles river at Los Angeles.

The city will pay 37½ per cent and the Santa Fe and Salt Lake railroads 12½ per cent each. The cost has been estimated at \$1,500,000.

ARCHITECT'S BILL DELAYED TEN YEARS TO BE PAID

Ten years ago W. E. Lougee, architect of Cleveland, Ohio, submitted to the Cuyahoga County Commissioner plans and drawings of a proposed county war memorial. His fee was \$2500 but he did not submit his bill until early this year. Prosecutor Ray T. Miller recently informed commissioners that the bill could be legally paid.

SAN DIEGO CONTRACTORS MUST HAVE CITY LICENSE

Building contractors operating in San Diego must pass an examination and post a bond in accordance with provisions of the licensing ordinance of that city, it is stated by Oscar Knecht, building inspector.

The ordinance applies to contractors doing work either on a lump sum or a fee basis. Persons taking contracts or sub-contracts from owners doing their own building must have a license. Those taking contracts or sub-contracts from a contractor licensed to do business in San Diego are not required to have a license. The San Diego ordinance was drafted by Mr. Knecht.

GOOD TIMES FORECAST

Harvey S. Firestone, tire manufacturer, in an address before the Cambridge (Mass.) Industrial Association declared that the present slump in business soon would be succeeded by greater prosperity than America has known for ten years. He advocated hard work, reduced prices and reduced overhead. He agreed with Henry Ford that soon there would be work for everybody.

High Salaries Said To Be Need of Country

Eldridge R. Johnson, industrialist. Moorstown, N. J., declares that high wages are the medium "to snap us out" of the present business depression.

Johnson, former president of the Victor Company, said there was evidence business generally is on the up-grade. He said an indication of this was seen in plans of the RCA-Victor Company to enlarge its force of 5000 men to a total of 17,500 before September 15th, that the Campbell Soup Company expects to have more employees by that date than ever before, and that the Pennsylvania Railroad has contracted for electric locomotive equipment running into millions of dollars.

He gave as his opinion that these were only isolated instances of a general movement toward business recovery.

Johnson said it was "far easier to resume on a high wage basis than it is on a low wage basis, because on a high wage basis everything begins where it left off right away, whereas on a low wage basis it will take years to build up again to the old standard."

HIGHWAY FUNDS APPORTIONED AS EMERGENCY EMPLOYMENT AID

Secretary of Agriculture Hyde has authorized the apportionment of the Federal funds for highway improvement in the fiscal year ending June 30, 1932. This will make it possible for the States to anticipate the Federal funds which will be paid to them next July and will enable them to expand and advance their highway programs at once and so provide emergency employment for a considerable number of men who might otherwise be destitute as the result of crop failures.

Congress has appropriated \$125,000,000 for the fiscal year which will begin July 1, 1931. After deduction of the 2½ per cent allowed for administration, Secretary Hyde was able to allot \$121,875,000 to the several States and to Hawaii. Because drought conditions are confined to only part of the States, and a balance of previous allotments remains unobligated to the credit of several of the States, the Secretary will use his discretion as to the approval of projects and will expedite the approval of projects complying with the following conditions:

1. That the State has obligated and has under construction all or practically all of the Federal aid funds previously allotted.

2. That State funds be required for each project in an amount sufficient to meet the Federal aid funds on the legally established basis. This would not exclude the voluntary contribution of additional country or local funds but would require the State itself to provide a minimum amount equal to the Federal pro rate required, basically fifty per cent Federal funds.

3. That the State Highway Department submit with each project statement a reasonable showing that the project if expedited would assist in providing employment in the drought areas or would directly contribute to the relief of unemployment in a substantial way. The authority for exercise of administrative discretion in the approval of projects is found in various sections of the Federal highway legislation.

Although the emergency road work is expected to be done in only those States that are suffering from unemployment and from the drought, the apportionment for all the States had been made.

California will receive, \$4,181,212; Oregon, \$1,997,569; Washington, \$1,940,922; Nevada, \$1,598,987; Arizona, \$1,768,023.

PAINT FAILURES—WHY? RIGHT PAINT IS THE ONLY CHEAP PAINT

(By Hurlbut S. Jacoby, Chief Engineer, and Glenn H. Picard, Chemical Engineer, H. K. Ferguson Company, Cleveland)

Paint failures can usually be traced either to the use of poor quality material, improper application, or application on surfaces which are not in proper condition.

In the case of improper material, two subdivisions pertain: First, good material specified for the wrong location; second, poor material not good on any location.

In connection with the latter it may truly be stated that a paint can be bought at almost any price within reason that one cares to suggest.

In reference to the former it is proposed to discuss proper materials to be used for three specific locations found in many ways inside the modern industrial plant—structural steel, wood roofs, and brick sidewalls. In this discussion it is assumed that normal atmospheric conditions pertain and therefore high humidity and corrosive gases will not be included.

In the case of structural steel, the first coat of paint must be of such a quality that it is held in place by adhesion and retards the formation of rust. Red lead, with its chemical and physical properties, comes closest to fulfilling both of these requirements.

Years ago the shop man objected so strenuously to red lead paint because of its harder application and quick hardening qualities, that other cheaper and poorer materials were used, with poor results. Improvements have gradually been made, however, until today ready mixed red lead paints of high grade are obtainable in a form that can be applied to steel at reasonable cost.

Less costly, but with high protective properties, is red oxide of iron, commonly called Iron Oxide. It is interesting to note that in the recent wrecking of the old Waldorf-Astoria Hotel in New York, the only effect of time on the one coat of red oxide paint applied on the steel erected 40 years ago has been to dull the high gloss of the paint.

Natural oxides of high iron content

are the best. At slight cost, the addition of about 10 per cent zinc chromate adds greatly to the rust preventive properties of iron oxide, which otherwise is only slightly inhibitive.

For the finish coat on steel, we might consider three paints which are highly satisfactory for the particular purpose.

In a textile mill or furniture factory, where cleanliness and light are important, mill white paints are often used for field coats. During the past few years aluminum paint has made rapid strides and is admirably adapted for the finish coat in plants of many kinds, in the steel mill, the foundry or forge shop, a black graphite paint is recommended.

Many owners, desiring a finish coat of mill white paint, have felt it necessary to start with a shop coat of gray paint in order to cover to better advantage with the finish coat. On the other hand we have found no particular advantage in coverage of white paint over a gray priming coat as compared with red, two coats of white being required in either case. Where a final coat of gray is desired, good coverage may be secured in one coat over a red priming coat. An added advantage in using two different colors is that any points which are missed in applying the final coat are immediately evident. Also, contrary to common conception, an eggshell or semi-gloss finish is far more satisfactory for a finish surface than gloss. The latter, with its greater oil content, attracts and holds dirt and dust and is actually harder to clean.

Being metallic, aluminum paint has its rightful place on structural steel, particularly as an after-coating. In addition to its excellent covering capacity and recognized durability, aluminum paint reflects light nearly as well as the average white paint.

Unlike other pigments, aluminum powder does not need to be ground in oil. The simple stirring of the pigment into the vehicle to form a uni-

form suspension is all that is required to prepare the paint for use. It should, however, be mixed and applied the same day if possible to get the maximum luster, the brightness and the hiding power.

The vehicle recommended for use with aluminum powder is a long oil spar varnish. Both the vehicle and the powder may be obtained from any reputable paint manufacturer. The powder is mixed with the vehicle in the proportion of two pounds per gallon. This gives approximately one and one-eighth gallons of aluminum paint.

For finish coats on structural steel, graphite paint gives excellent protection. Black or dark green are attractive colors obtainable with graphite pigments. Natural graphite is preferable for it possesses the faculty of "leafing" over a surface. The result is a shingle-like structure, highly impervious to moisture.

The lighter colors, such as gray, light green or white, cannot be produced if graphite is used in the pigment in sufficient quantity to be definitely effective. If desired, these shades, white lead and oil or a combination of white lead and zinc oxide in oil should be used.

Painting Interior Woodwork

In factory construction the major item of interior woodwork requiring painting is the wood ceiling consisting usually of yellow pine lumber.

The three main essentials of a good priming coat on wood are, first, a proper bond between the primer and wood, second, a sufficiently hard film to support the superimposed coats and third, the surface presented for receipt of the next coat must be such that a good bond between the two will result.

White lead and oil forms unquestionably the best priming coat for wood surfaces under normal conditions. The necessary bond with the wood is provided by the use of a suitable volatile solvent. No better or more universally acceptable solvent can be recommended than turpentine.

Excellent results may be secured by using mill white flats for first coat on interior wood and, in view of the absence of severe exposure, the resulting saving in cost is justified.

Knots and streaks of heavy pitch which are prevalent in yellow pine lumber are apt to burn through white paint unless sealed over. The action is particularly noticeable in the case of uninsulated roofs subject to extremely hot sun, due to the action of the heat upon the pitch.

For many years it has been standard practice to coat in all knots and pitch with shellac before applying the priming coat and it is well to take this precaution whenever circumstances indicate a possibility of trouble from this source.

A priming coat of aluminum powder in a varnish liquid placed directly over the wood has been found to provide a satisfactory priming coat for a finish coat of white, at the same time giving excellent protection against bleeding from pitch and knots, without the use of shellac.

The final coat on wood surfaces may be a mill white or other shade desired. Over a good primer the chief consideration in the final coat becomes one of decoration and the permanence of color.

Painting Masonry Walls

Of first importance in the successful painting of masonry walls is the sealing of the surface to provide a proper foundation for succeeding coats.

The first, or sealing coat, must be of a character which will prevent penetration and loss of oils from the final coats. Such penetration results in spots of low gloss which are quite "flat" in comparison with the

mainder of the surface. The painter refers to this action as "suction."

The sealing coat must also prevent the action of lime compounds in the mortar which if active will destroy the oils of the final coats of paint, producing the effect known as "lime burning."

The normal practice is to seal the masonry surface with a varnish type of size. When conditions are not extreme, a separate coat of size may not be necessary but in all cases about 25 to 50 per cent of the first coat of paint should be varnish size to insure proper sealing.

In the case of ready mixed mill whites, the manufacturer usually provides a separate material for the priming coat and finish coat. The priming coat thus prepared will usually contain a fairly high percentage of sizing material, and the addition of further size in proportions given above may not be necessary. The recommendations of the manufacturer, based upon the actual conditions, should be followed under such circumstances.

The possible action of lime always constitutes a hazard to paints used on masonry, particularly if moisture reaches the wall through some unexpected failure of the structure elsewhere.

For this reason it is considered good practice to apply a preliminary wash coat of zinc sulphate in water before the surface is painted. The zinc sulphate reacts with the lime and forms harmless compounds thus protecting the outer film from damage.

The final coat on masonry may be the same as used elsewhere on the interior of the building and discussed later under the section devoted to Mill White Paints.

Preparation of Surfaces

A source or paint failure too often overlooked is an improper condition of the surface to receive the paint. It would appear hardly necessary to point out that mud, concrete, and mortar should be carefully cleaned off of all surfaces to be painted. It is not at all unusual to observe paint being applied over any or all of the items mentioned.

Grease and oil also cause much trouble, especially on steel. They should be moved with benzine or a suitable alkali. Mill scale and rust should be removed down to sound metal. If rust spots are painted over, rusting continues under the paint and finally pushes off the entire film. Badly rusted steel is best cleaned by use of a sand blast. However, if thoroughly performed wire brushing will be satisfactory.

Dampness of the surface should be guarded against particularly. If new wood is wet or even damp, it will repel adherence of oil paint. Lumber which is not perfectly dry should be allowed to dry out before painting. A total of ninety days air drying in good weather from the time the timber is cut should be considered a minimum.

Moisture in masonry walls at time of painting will almost invariably cause trouble. Care must be taken to distinguish between superficial surface drying and the thorough drying which is essential to proper performance. As a rule two or three months should elapse before paint is applied to masonry depending to a certain extent on the condition of the weather.

No priming coat should be applied shortly after a rain, or during excessively humid weather. Painting during cold or frosty weather should also be avoided.

Application

The capacity for service of any paint depends to a great extent upon the way it is applied. If brushed on, it should be brushed out by repeated passages of the brush over the surface. Particularly is this essential in the case of rough surfaces. When paint is simply flowed on, without additional brushing, it lies on top of any extraneous film that may be on the surface. It bridges over irregularities in the surface without good contact and remains a coat of varying depth.

Too thick a coat is liable to wrinkle. When this happens wear is uneven and repainting difficult. Too thin a coat is also objectionable as only a slight amount of chalking will expose the surface underneath.

Paint may be applied satisfactorily by spraying. Skill is required in handling the apparatus to secure best results and operators should be required to demonstrate their fitness for the work before being allowed to coat actual surfaces. A proper balance of paint and air volume, air pressure and distance of the nozzle from the surface is essential to good work.

Too much paint applied by spray causes wrinkling. Too little air causes poor atomization of the liquid and uneven coats result. Too low a pressure fails to force contact between surface and liquid, too much air drives the paint into a mist, resulting in abnormal loss of material and poor films. It may be seen that it requires skill and practice to lay on a good coat of paint with an air spray.

Mill White Paints

The use of the so-called mill white paints for interior factory purposes is now quite universal. This type of material has great covering capacity and properly handled will produce a good white surface in two coats.

Mill whites are produced in three finishes — flat, semi-gloss or egg-shell and full-gloss. The semi-gloss is to be recommended for general purposes. It provides a dense heavily pigmented film which will not accumulate dust and dirt as will the full-gloss and without the tendency to dust away which is apt to characterize a flat white.

The pigment most frequently employed is lithopone, a precipitate consisting of zinc sulphide and barium sulphate in fairly definite proportions. Lithopone may be used either alone or in combination with zinc oxide, titanox, or, in some cases, with a limited percentage of inert.

Especially treated vehicles must be used to prevent yellowing with age and under heat. In fact, the principal criterion of the value of a mill white is the length of time the paint will remain white under service.

The most important factor in the intelligent selection of paint is knowledge of the conditions to be met. A large amount of research is constantly in progress in the laboratories of reliable paint manufacturers. New developments are constantly appearing which provide better answers to conditions which have heretofore given trouble.

The good paint manufacturer can be depended upon to furnish a material which will meet the conditions unless he is handicapped by price restriction. Bearing in mind that the cost of a good job of painting the average building as outlined in this article is not more than 3 per cent of the entire cost of the building structure, and further that included in this 3 per cent, only one-half constitutes the cost of paint material, one can see the folly of letting the price of paint itself stand in the way of getting a satisfactory result. Many an owner has had to resort to the removal of paint, low in first cost, but expensive in the long run.

TIME WITHIN WHICH LIENS MUST BE FILED

1. If there is a General Contractor handling the entire work:
 - a. If a valid Notice of Completion is filed:
 1. General contractor has 60 days after filing of notice.
 2. All other lien claimants have 30 days after filing of notice.
 - b. If no Notice, or no valid Notice, of Completion is filed:
 1. All lien claimants have 90 days after completion.
2. If there is no general contractor on the job:
 - a. If a valid Notice of Completion is filed:
 1. Each lien claimant has 60 days after filing of Notice of Completion, except a mere materialman who furnishes mere materials direct to the Owner, or a laborer who merely performs labor directly for the Owner, and such last named materialman and/or laborer has only 30 days in which to file his lien.
 - b. If no Notice, or no valid Notice, of Completion is filed:
 1. All lien claimants have 90 days after completion.

NOTES IN EXPLANATION OF THE ABOVE

1. The periods of time mentioned above represent the time within which a lien must be filed.
2. Completion consists of:
 - a. Occupation or use of a structure by the owner or his representative accompanied by cessation of labor thereon.
 - b. Acceptance by the owner or his agent of said structure.
 - c. Cessation from labor for 30 days upon contract or structure.
 - d. Filing of Notice of Completion.
3. What constitutes a valid Notice of Completion:
 - a. Must be filed within 10 days after completion of any contract or structure or within 10 days after there has been a cessation from labor for 30 days.
 - b. Must be filed by the Owner.
 - c. Must be filed in the office of the County Recorder in the County in which the property is situated.
 - d. Notice must set forth when contract or improvement was completed or on which cessation from labor occurred; the Owner's name and the nature of his title; a description of the property; and must be verified by the Owner, or some person in his behalf.

STATE CORPORATION RULES
ARE DRAFTED

Final draft of the rules of practice
before the State Corporation Com-
mission, governing operations of Cali-
fornia concerns, has been completed
and copies are ready for distribution,
it is announced by F. G. Athearn,
corporation commissioner.

The rules contain new provisions
affecting "bucket shop" operations,
oil royalty companies, partial pay
houses, investment trusts, finance
companies and many others.

The first draft of rules of practice
was issued last June. Since that
time experience in their application
showed the need for more flexibility
and to relieve companies from the
onset of excessive regulation, Athearn
said.

California continued to maintain
her stride in building construction
for the month of July. With sixty-
six cities reporting, California rolled
up a building total of \$16,139,170
in July, being exceeded only by the
state of New York with forty-six
cities reporting a total of \$64,162,860.
Illinois ranked third with fifty-one
cities reporting an expenditure of
\$11,585,589. The twelve leading states
in building activities for July follow:

No. of Cities		
	Reporting	Est. Cost
New York	46	\$64,162,860
California	66	16,139,170
Illinois	51	11,585,589
Massachusetts	31	9,144,280
Ohio	28	8,103,791
Wisconsin	27	7,083,402
New Jersey	27	6,977,002
Pennsylvania	30	6,800,761
Michigan	23	6,582,192
Texas	23	5,357,608
Missouri	5	4,012,590
Connecticut	20	3,334,433

Western Wheeled Scraper Co., Au-
rora, Ill., has issued a new pictorial
catalog, No. 80, containing 144 pages
of illustrated data on this company's
line of earth moving equipment.

Engineering News Section

BRIDGES

(a) Construction of causeway on a rolled earth fill approximately 30 ft. high and 230 ft. long, containing 4800 cu. yds. of embankment of assorted materials from three different sources
1. 5000 cu. yds. of selected earth borrow to be placed in the rolled fill portion of the causeway.

2. 1100 cu. yds. of solid rock from the Swayne Logging Railway and the highway cut at the east end of the proposed fill, material to be placed on slope of fill.

3. 2300 cu. yds. of rock and granular material from the widening of Lakeside Way, materials to be placed on the slopes of fill and in highway approaches to fill.

(b) Cleaning and grubbing timber and brush on site and approaches and moving present highway bridge.

(c) Stripping site to fill to bedrock to required width.

(d) Construction of cut-off trench to width required.

(e) Construction of 18 inches inside diameter reinforced concrete drainage conduit with timber control gate stand and placing control gate from outlet from old dam.

(f) Constructing three tube reinforced concrete syphon drainage culverts.

(g) Constructing highway approach at each end of fill.

(h) Reconstructing Swayne Logging Railroad (narrow gauge). Taking up and relaying 1400 ft. of main line track and 90 ft. of siding track. Moving and resetting water tank and camp buildings, tent floors and grading new camp sites.

(i) Regrading road connecting with Lakeside Way.

(j) Furnishing all material and labor, hauling, mixing, placing, laying out, assembling of materials, and all construction work either temporary or permanent in connection with the work and delivering the entire work complete and ready for use.

(k) Constructing and maintaining a suitable detour of the present county road during construction of causeway. Work under County Imp. Act of 1921.

MARIN COUNTY, Cal.—U. S. War Department has approved plans of State Highway Commission for a bridge across the upper part of Richardson's Bay, a unit of the state highway system. The cost of the bridge, including the one-mile approach from the new Alto cut-off on the north and the reconstruction of the present highway south from Manzanita to the Sausalito city limits is estimated at \$900,000.

HUMBOLDT COUNTY, Cal.—Fred J. Maurer & Sons, Eureka, at \$50,320 awarded contract by State Highway Commission to construct overhead crossing over tracks of the Northwestern Pacific Railway about 2½ miles north of Beatrice, consisting of two 61-ft. 7-in. through girder spans, one 40 ft. steel beam span and approximately 450 ft. of timber trestle approach.

OROVILLE, Butte Co., Calif.—Lord & Bishop, Oroville, at \$29,873 awarded contract by county supervisors for improvements in Road District No. 1, involving:

OAKLAND, Cal.—County Surveyor Geo. A. Posey completes plans for two types of bridges to replace the Park Street Bridge. One plan provides for a bascule which gives unlimited clearance for ships and the other a lift bridge, designed to give a clearance of 185 ft. A selection will be made by county supervisors shortly.

PALO ALTO, Santa Clara Co., Cal.—Until September 2, 4 P. M., bids will be received by J. F. Byxbee, city engineer, to construct a reinforced concrete culvert opposite the Mayfield Depot on Alma St., between California and Oregon Aves. Certified check 10% payable to city required with bid. Plans obtainable from engineer.

SACRAMENTO, Cal.—Following bids taken under advisement by county supervisors to construct timber bridge (flag bridge) over Laguna Creek:

(a) of redwood piles and steel construction; (b) treated Douglas fir piles and steel construction; (c) untreated Douglas fir piles and steel construction:

M. A. Jenkins, 3560 Y St., Sacramento, (a) \$59,477; (b) \$59,695; (c) \$45,269.

C. J. Nystedt, Capital National Bank Bldg., Sacramento, (a) \$60,062; (b) \$60,217; (c) \$44,966.

Ralph Hunter, Sacramento, (a) \$63,625; (b) \$62,146; (c) \$46,985.

Lord and Bishop, Oroville, (a) \$64,419; (b) \$66,804; (c) \$49,752.

Ben Gerwick, San Francisco, (a) \$64,222; (b) \$65,719.

E. Force, (a) \$68,267; (b) \$67,473; (c) \$53,151.

Healey-Tibbitts Construction Co., (a) \$74,743; (b) \$73,778; (c) \$58,572.

Lindgren Swinerton Co., Inc., San Francisco, (a) \$73,553; (b) \$73,170; (c) \$54,840.

September 6, 10 A. M., bids will be received by Gladys Stewart, county clerk, to construct three reinforced concrete bridges over three branches of "Outside Creek," known as Bridges No. 91A, 91B and 91C, involving:

477.84 cu. yds. class A conc. incl. excavation;

38.12 cu. yds. class F concr.;

54.96 cu. yds. class A concr. in pavement;

Lump sum bid on wooden guard rail, incl. material;

1000 cu. yds. earth fill.

All material to be used will be furnished by the county f. o. b. Farmersville Siding on the S. P. Ry., except as otherwise shown in the specifications. Plans may be obtained from the surveyor, T. W. Switzer, on deposit of \$10. Certified check, 5%.

CHICO, Butte Co., Cal.—T. H. Pelk, Chico, at \$4,403.25 awarded contract by city council to widen Main Street bridge. Reconstruction will provide a bridge 19 ft. wider than the present structure, giving a total width of 44 ft. Six feet of sidewalk will be provided on the west side of the bridge.

REDWOOD CITY, San Mateo Co., Cal.—Until September 2, 3 P. M., bids will be received by B. E. Myers, city clerk, to construct nine reinforced

concrete culverts on the Woodside Road at the following streets: One at Linden St.; one at Madrone St.; one at Locust St.; one at Cypress St.; one at Murray Court; one at Central Ave.; one at Bonita Ave.; one at Nueva Ave.; one at Orchard Ave. Estimated cost \$1000 each. Certified check 10% payable to city required with bid. Plans obtainable from C. L. Dimmitt, city engineer.

VISALIA, Tulare Co., Calif.—Until Sept. 6, 10 A. M., bids will be received by Gladys Stewart, county clerk, to construct reinforced concrete bridge over Deep Creek, known as bridge No. 89, involving:

(1) 1.01 cu. yds. class F concrete;

(2) 183.55 cu. yds. class A concrete, including excavation;

(3) 250 cu. yds. fill.

All material to be furnished by the county f. o. b. Farmersville Siding on the S. P. Ry., except as otherwise specified in the specifications. Plans may be obtained from the surveyor, T. W. Switzer, on deposit of \$10. Certified check 5%.

MERCED, Merced Co., Cal.—Until Sept. 11, 11 A. M., bids will be received by P. J. Thornton, Clerk of the Board of Supervisors, Merced, for the construction of three bridges as follows: Bridge No. 297 over Edendale Creek on Cox Ferry Road, Bridge No. 208, over Canal Creek on Cox Ferry Road, and bridge No. 209 over Canal on North line of Sec. No. 22, T. 11 S., R. 12 E. Plans and specifications obtainable at office of County Clerk or County Surveyor, W. E. Bederson, upon deposit of \$10. Certified check 10% made payable to chairman of the Board of Supervisors must accompany each bid.

DREDGING, HARBOR WORKS & EXCAVATIONS

SANTA BARBARA, Cal.—Merritt, Chapman & Scott Corp., 720 Wilmington Ave., San Pedro, at \$118,750 submitted only bid to city council to construct East Cabrillo Blvd. wall or revetment, involving:

(1) fur. and place 13,500 tons rip-rap on outside of bulkhead, \$4.60 ton;

(2) fur. and place 1500 tons rip-rap on inside of bulkhead, \$4.90 ton;

(3) fur. and place 4000 tons asphalt between rip-rap, \$3.25 ton;

(4) fur. and place 50 lin. ft. creosoted sheet piling or 21,500 sq. ft. at \$1.50 sq. ft.

Taken under advisement.

STOCKTON, San Joaquin Co., Cal.—Until Sept. 2, 3 P. M., under Circular Proposal No. 31-59, Specification 2347, bids will be received by P. S. Engineer Office for clearing brush and trees from the area of Item 306 on Routh and Ready Island along the west bank of the San Joaquin River, between the mouth of Stockton Channel and Burns Cut-off, a distance of about 3¼ miles below the city of Stockton. Specifications obtainable from above.

STOCKTON, San Joaquin Co., Cal.—Until Sept. 2, 3 P. M., under Circular Proposal No. 31-58, Specification No. 2344, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, for clearing brush

and trees from the area of Item 303 along the east bank of the San Joaquin river, between the mouth of Stockton Channel and Smith Canal, a distance of about 2 miles below the city of Stockton. Specifications obtainable from above.

RICHMOND, Contra Costa Co., Cal.—Daniel Contracting Co., 503 Market St., San Francisco, awarded contract by Berkeley Waterfront Co. for dredging and filling property on the Richmond Inner Harbor and extending along the water front to Albany and Berkeley. Channel is to be dredged and several hundred acres of potential lands reclaimed. Channel will be about 400 ft wide and 7800 ft. long. The cost is estimated at \$2,000,000.

NICOLAUS, Sutter Co., Cal.—Until Sept. 23, 3 P. M., under Circular Proposal No. 31-57, specification 2260, bids will be received by the U. S. Engineer Office, California Fruit Bldg., to construct approximately 8700 ft. of levee on the left bank of the Feather River near the "Lake of the Woods," about one mile above the mouth of the Bear River in Yuba County and approximately three miles up stream from the town of Nicolaus. Specifications obtainable from above.

STREET LIGHTING SYSTEMS

REDWOOD CITY, San Mateo Co., Cal.—Due to protests of property owners the city council has abandoned proceedings providing for the installation of an ornamental electrolux system in Broadway and Hopkins Ave., west of El Camino Real.

PORTERVILLE, Tulare Co., Cal.—As previously reported, R. A. Wattson, 1026 McCadden St., Los Angeles, at \$21,256 awarded contract by city council (134) to install ornamental electrolux system in Main St., bet. Olive and Morton Sts., involving 56 two-light standards together with underground system. Union Metal Mfg. Co.'s standards, Design No. 2881. Complete list of bids follows:

Walker & Martin, Los Angeles.....	21,267
A. R. Parsons & Co., Porterville.....	21,600
H. C. Reid & Co., San Francisco.....	21,848
Robinson Elec. Co., Fresno.....	21,850
Butte Elec. Co., San Francisco.....	22,600
City Improvement Co., Berkeley.....	22,700

MACHINERY AND EQUIPMENT

EUREKA, Humboldt Co., Cal.—Until Sept. 7, 8 P. M., bids will be received by A. Walter Kildale, City

Clerk, to furnish and deliver one six-cylinder automobile, roadster or coupe, to be painted white, in conformity with the state traffic regulations. Allowance to be made for Chrysler roadster now owned by the county.

EUREKA, Humboldt Co., Cal.—Troy Laundry Machinery Co., 1201 Folsom St., San Francisco, at \$7130 awarded contract by county supervisors to furnish and install equipment in new county hospital, recently completed.

SUNNYVALE, Santa Clara Co., Cal.—Until September 6, 7:30 P. M., bids will be received by Fred T. Butler, clerk, Sunnyvale School District, to furnish and deliver a school bus under the following specifications:

Truck Chassis: Same to be standard factory chassis having a wheel base of 168 inches, 4 cylinder motor, 4 speed transmission, bevel gear drive differential, semi-disc steel wheels, dual rear wheels and tires, bumper on front. Brakes to be of 4 wheel internal expanding type with parking brake to be a separate system in the rear drums and also of internal expanding design. Tires to be truck and bus type balloons size 23x6.00. Gas tank in cowl and to be part of dash. Motor to be equipped with governor.

Bus Body: Same to be of Patchetts and Carstensen design and manufacture, to be equipped with non-stutter Triplex safety glass in the windshield and the large rear window is to be the wire-inserted safety glass. Side windows steel frames fitted with one large light of No. 30 celluloid, windows to be held in any position between lowered and fully raised position by an eccentric catch. The upholstery is to be of genuine leather and all cushions to be equipped with coil springs and padded with curled hair. The interior finish to be natural wood finish with spar varnish. The exterior of body to be sheathed completely in 22 gauge silver finish auto body steel and to be lacquer enameled in any color desired and with any lettering desired in contrasting color.

And furnished with the following equipment: Extra tire and tube mounted on extra wheel on carrier. Ventilating windshield, sun visor, windshield wiper, rear vision mirror, dash light, gasoline gauge, dome lights with dash control, electric turning signal as required by California Vehicle Department, and with electric stop and tail light.

Seating Arrangement: Longitudinal seat down each side, seat across the back and an upholstered bench seat down the center, with an individual bucket seat for the driver.

RESERVOIRS AND DAMS

LONG BEACH, Calif.—C. H. Shaw, superintendent of the Water Department, and Burt Harmon, municipal

hydraulic engineer, have started plans for a 54,000,000-gal. reservoir to be built on Reservoir Hill. The top of the hill will be leveled, its altitude being reduced about 12 ft., to provide a 15-acre site. The structure will be built in units, the first to cost between \$350,000 and \$400,000. Plans will be ready for approval by the city manager and city council in September.

SEWERS AND SEWAGE DISPOSAL PLANTS

PT. REYES, Cal.—See "Government Work and Supplies," this issue. Bids wanted for improvements at U. S. Naval Radio Compass Station at Point Reyes.

SANTA CRUZ, Santa Cruz Co., Cal.—Until September 8, 2:45 P. M., bids will be received by S. A. Evans, city clerk, (460-C) to construct vitrified clay pipe main sanitary sewer with wye branches and brick manholes in Plateau Ave. bet. Woodrow Ave. and Columbia St. 1911 Act. Certified check 10% payable to city required with bid. Specifications obtainable from Roy Fowler, city engineer.

BERKELEY, Alameda Co., Calif.—Until September 2, 10 A. M., bids will be received by Florence E. Turner, city clerk, to construct sewer in Hilldale Ave., and in right of way from Hilldale Ave. to Euclid Ave., about 500 ft. south of Marin Ave. Certified check 10% payable to city required with bid. Plans obtainable from city engineer on deposit of \$10, returnable.

SAN FRANCISCO.—As previously reported, bids will be received by S. J. Hester, secretary, Board of Public Works, to construct Section K of the College Hill Tunnel Sewer, extending from the Mission Viaduct to Valencia and Army Sts.; estimated cost, \$320,000. Project involves:

- (1) 4,319 lin. ft. 4x6-ft. 6-in. reinforced concrete tunnel;
- (2) 1,508 lin. ft. 4x6-ft. reinf. concrete sewer;
- (3) 318 lin. ft. 3-ft. 6-in. x 5-ft. 3-in. reinforced concrete sewer;
- (4) 315 lin. ft. 6-foot circular reinf. concrete sewer;
- (5) 75 lin. ft. 15-in. V.C.P. sewer;
- (6) Reinforced concrete junction struc. at 29th and San Jose Ave.;
- (7) Do at San Jose and Army St.;
- (8) Do at Valencia and Army Sts.;
- (9) 7 brick or concrete manholes, complete on concrete sewers;
- (10) 3,800 lin. ft. 6-in. V.C.P. under-drain covered with concrete or imbedded in broken rock;
- (11) 1,900 lin. ft. 8-in. do.;
- (12) 500 lin. ft. 10-in. do.;
- (13) 300 lin. ft. 12-in. do.

Time for completion, 450 days. Deposit of \$10 required for plans, obtainable from Bureau of Engineering, 3rd floor, City Hall. Deposit is returnable.

ORANGE, Cal.—Until 1 P. M., Sept. 8, bids will be received by city council for constructing a storm drain in Lemon St., from Walnut Ave. to Santiago Creek, approximately 6000 ft., and the construction of two 1000-ft. laterals. Cost, \$75,000. C. C. Bonebrake, city engineer.

WATER WORKS

ORANGE, Orange Co., Cal.—Until 1 P. M., Sept. 10, bids will be received by the city council for construction of the \$75,000 storm drain project. Storm drain will be in three parts, a 6600-foot mainline down Lemon St. from Walnut St. to Santiago creek and two laterals 100 feet long on Palm and Chapman Aves. from Lemon to Orange St. Specifications provide

for the installation of a conduit of concrete 24 inches in diameter at Walnut St., gradually increasing in size at each intersection until the maximum size of 54 inches is reached. Culverts are to be placed under the street intersections on Glassell St., which will do away with the dips at Walnut, Sycamore, Palm, Maple, Palmway and La Veta Aves. C. C. Honebrake, city engineer.

TORRANCE, Los Angeles Co., Cal.—Hearing on proposal to hold election in Municipal Improvement District No. 1 to vote on \$400,000 bond issue, for water supply and distribution system, will be held at 8 P. M., Sept. 2. Estimated cost, \$331,000. Proposed improvement work is acquisition and construction of a water producing and distributing system, including wells, pump, tanks, reservoirs, distribution mains, and land, rights-of-way, and easements therefor, and all other necessary equipment and appurtenances for a complete water producing, purifying and distributing system, for the sale of water for domestic, agricultural, industrial and other uses.

FRESNO, Fresno Co., Cal.—Edgley Co., 800 E. 61st St., Los Angeles, awarded contract by county supervisors at \$42,758 for construction of water distributing system in Fresno County Water Works District No. 1. Work involves the following approximate quantities: 6880 lin. ft. 4-in. cast iron pipe; 25,580 lin. ft. 6-in. cast iron pipe; 6750 lin. ft. 8-in. cast iron pipe; 10,100 lbs. cast iron fittings; 10 gate valves, 4-in.; 32 gate valves, 6-in. 7 gate valves, 8-in.; also irrigating hydrants, service connections, etc. Cost, \$55,000.

Work is to be done under bond issue of \$67,000.

Plans and specifications prepared by Consulting Engineer, A. Segel, Griffith-McKenzie Bldg., Fresno.

PT. REYES, Cal.—See "Government Bids wanted for improvements at U. S. Naval Radio Compass Station at Point Reyes.

FRESNO, Fresno Co., Cal.—Edgley Co., 800 E. 61st St., Los Angeles, at \$42,758 awarded contract by county supervisors to construct water distributing system in Fresno County Water Works District No. 1. Project involves: 7000 ft. 4-in., 25,000 ft. 6-in. and 7000 ft. 8-in. pipe line. Perry P. Brown, engineer, 512 Griffith-McKenzie Bldg., Fresno.

STREETS AND HIGHWAYS

BUTTE COUNTY, Cal.—Following bids received Aug. 27 by C. H. Whitmore, District Engineer, State Highway Commission, Sacramento, to construct a reinforced concrete bridge over the State Highway 1 mile east of Oroville, consisting of one earth filled arch span, 46 ft. long: G. D. Griffith & H. Gunther,

Sacramento	\$6,577
E. C. Neilson, Orland	\$6,679
Otto A. Peters, Oroville	\$6,840
Paul White, Santa Monica	\$6,898
R. B. McKenzie, Red Bluff	\$7,525

Bids held under advisement.

SAN LUIS OBISPO COUNTY, Cal.—Until Sept. 5, 2 P. M., bids will be received by L. H. Gibson, District Engineer, State Highway Commission, Bank of Italy Bldg., San Luis Obispo, for 1.8 miles of bituminous macadam boarders from Yerba Buena Creek south. Specifications obtainable from district engineer.

SACRAMENTO COUNTY, Cal.—Perlera & Reed, Tracy, at \$7225 awarded contract by State Highway Commission to surface with crushed stone or gravel, 4.6 miles between Twin Cities and $\frac{1}{2}$ miles n. e. to Herald.

GILROY, Santa Clara Co., Cal.—Until September 1, 8 P. M., bids will be received by E. F. Rogers, city clerk, to improve portions of Hanna, Rosanna and other streets, involving: 500,882 sq. ft. 5-in. asphalt pavement; 41,515 sq. ft. 2-ft. gutter; 3736 lin. ft. curb; 4500 sq. ft. sidewalk; 3052 lin. ft. 6-in. conc. storm sewer; 9 catch-basins; 10,318 cu. yds. excavation 1911 Act. Bond Act 1915. Certified check 10% payable to city required with bid. Plans on file in office of clerk Raymond W. Fisker, city engineer, 74 S. First St., San Jose. Specifications on file in office of clerk.

SANTA BARBARA COUNTY, Cal.—Santa Maria Construction Co., Santa Maria, at \$1744 awarded contract by State Highway Commission to oil 4 miles of shoulders on the coast highway between El Capitan Creek and 1 mile south of Tajiguas Creek.

SANTA ROSA, Sonoma Co., Cal.—Clark and Henry Construction Co., Chancery Bldg., San Francisco, awarded contract by city council (1627) to improve Cleveland Avenue between Carrillo St. and Ridgeway Ave., involving grading; 4-inch macadam base with 3-inch asphaltic concrete surface paving, laid in one-course; hydraulic cement concrete curbs and gutters.

TULARE COUNTY, Cal.—A. J. and J. L. Fairbanks, Linden Ave., South San Francisco, at \$87,452.44 submitted low bid to U. S. Bureau of Public Roads, San Francisco, to grade portions of Section 1-B, Generals Highway, Hospital Road to Giant Forest, in Sequia National Park, 4.514 miles in length. W. A. Bechtel Co., 206 Sansome St., San Francisco, only other bidder at \$92,061.05. Engineer's estimate, \$79,202.83. Following is a listing of the unit prices on the project, together with the estimate of the engineer:

Lighthouse Ave. and Bayview Ave., and Jewel Ave., bet. Pacific Ave. and point 510 ft. west, involving cem. conc. gutters; 2-in. asph. conc. pave on 4-in. crushed rock base, etc. 1911 Act. Bond Ace 1915. Hearing September 18. L. C. Fisher, deputy city clerk.

FAIRFAX, Marin Co., Cal.—Frank Main, Fairfax, at \$1200 awarded contract for bitumens paving in connection with school yard for Fairfax Grammar School District

CLARK COUNTY, Nevada—Until September 3, 2 P. M. bids will be received by State Highway Commission, Carson City, for grading, construct structures and gravel surfacing on 12.62 miles between California-Nevada State line and Jean. Certified check 5% required with bid. Plans on file in office of U. S. Bureau of Public Roads, 461 Market St., San Francisco, and obtainable from S. C. Durkee, state highway engineer at Carson City on deposit of \$15, of which \$10 is returnable.

SALINAS, Monterey Co., Cal.—Until September 2, 10 A. M., bids will be received by C. F. Joy, county clerk, to crush and stockpile broken stone at Greenfield in Supervisor District No. 3. Specifications obtainable from County Surveyor Cozzens on deposit of \$10, returnable.

WASHOE COUNTY, Nevada—Nevada Rock & Sand Co., Reno, at \$24,912 awarded contract by State Highway Commission to grade, construct structures and place surfacing materials on 2.54 miles bet. Sparks and Vista. Engineer's estimate, \$20,645.

PLACER COUNTY, Cal.—A. Teichert & Son, 1840 37th St., Sacramento, at \$4092 awarded contract by State Highway Commission for bituminous surface treatment between Roseville and Rocklin, involving 750 tons crushed gravel or stone screenings, ½-in to ¾-in at \$4 ton; 42 tons asph. road oil, \$26 ton.

LOS ANGELES COUNTY, Cal.—Southwest Paving Co., Washington Bldg., Los Angeles, at \$16,425 awarded contract by State Highway Commission to widen with bituminous treated road borders, 4.3 miles between Santa Clara river and the Castaic School.

HAYWARD, Alameda Co., Cal.—M. J. Bevanda, Savings and Loan Bldg., Stockton, at \$44,561.20 awarded contract by city council to improve portions of Smalley and Laurel Aves. and Delmar and Princeton Sts., involving: 165,450 sq. ft. 6-inch full penetration emulsified asphalt macadam paving (incl. grading), 12c.; 10,723 lin. ft. concrete curbing, 55c.; 21,202 sq. ft. concrete gutter, 25c.; 42,850 sq. ft. concrete sidewalk, 19c.; 1,297 lin. ft. 6-in. vitrified sanitary sewer, \$1.20;

1,350 lin. ft. 4-inch vitrified side sewer, \$95c.;

36 4x8-in. wye branches, \$1 each;

4 vit. pipe lampholes with concrete and c. i. frames, \$28 each;

340 lin. ft. concrete and part circle corr. iron drain culverts, \$4;

157 lin. ft. redwood header boards, 40c.

Other bids: Jack Casson, Hayward, \$52,249; Heafey-Moore Co., Oakland, \$62,203.55.

ALTUAS, Modoc Co., Cal.—City council rejects bids received August 18th to improve Main street between Carlo and 12th Sts., and new bids will be considered September 5, 8 P. M. Bidders were:

I. L. Ryder, San Jose, \$6,577; Heafey-Moore Co., Oakland, \$22,129; Clark & Henry Constr. Co., San Francisco, \$136,832

Hanrahan Co., San Francisco \$138,360

Due to error in the lowest bid, the bids were rejected. Project involves:

(1) 29,000 sq. yds. asph. conc. pave.; (2) 4,600 cu. yds. crushed rock subbase;

(3) 8,000 linear feet curbs and gutters (hyd. cement concrete);

(4) 4,600 sq. yds. hyd. cem. concrete sidewalks;

(5) 5,300 lin. ft. 4- and 6-inch water mains with fittings.

1911 Act. Bond Ace 1915. City will pay \$25,000 of total cost from General Fund in city treasury. Plans obtainable from S. A. Mushen, city engineer.

MARYSVILLE, Yuba Co., Cal.—City council declares intention (38) to improve 12th St., bet. E and Chestnut Sts.; E St., bet. 4th and 5th Sts.; E St., bet. 5th and 6th and E St. from 16th to 17th Sts., involving removal of concrete curbs and sprinkler system and trees; grading pave with 2½-in. asph. conc. base and 1½-in. asph. conc. surface; construct concrete curbs and gutters. 1911 Act. Bond Ace 1915. Hearing September 8. Chester O. Gates, city engineer.

STOCKTON, San Joaquin Co., Cal.—Until September 15, 11 A. M., bids will be received by Eugene D. Graham, county clerk, to improve Brum Road in town of Lockeford to Montgomery road in Rd. Dist. No. 2. Certified check or bond 10% payable to Chairman of the Board of Supervisors required with bid. Plans obtainable from Julius Manthey, county surveyor at Stockton.

SAN FRANCISCO—Until September 3, 2:30 P. M., bids will be received by S. J. Hester, Secretary, Board of Public Works, to improve:

Portions of Bosworth, Laidley and Sussex Sts., involving construction of artificial stone sidewalks. Estimated cost \$400.

Portions of Deming St., Manor Dr., Fairfield Way, 30th Ave., etc., involving construction of artificial stone sidewalks. Est. cost, \$400.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd Floor City Hall.

TULARE COUNTY, Cal.—A. J. & J. L. Fairbanks, South San Francisco, at \$87,452.44 submitted low bid to grade 4.54 miles of the Generals Highway in Sequoia National Park. Complete list of unit bids received on this project will be found on Page Five of this issue.

SAN FRANCISCO—Until September 3, 2:30 P. M., bids will be received by S. J. Hester, Secretary, Board of Public Works, to improve:

San Mateo Ave., bet. San Diego and Niantic Aves. (where not) involving armored concrete curbs; 6-in. vit. pipe sidersewers; 2-inch asphalt concrete surface pavement on 6-inch Class "F" concrete base. Est. cost \$800.

17th Ave., bet. Moraga and Noriega Sts., involving grading; concrete curb and walks; 8-in. and 12-in. vit. pipe sewers with manholes, side sewers and wye branches; br. catchbasins; 6-in. Class "F" conc. base pavement with 2-in. asphalt conc. surface. Est. cost \$16,000.

Crossing of 45th Ave. and Lawton St., involving grading; armored concrete curb; conc. walks; br. catchbasins; 6-in. Class "F" conc. base pavement with 2-in. asphalt conc. surface. Est. cost, \$2000.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, Third Floor, City Hall.

BELMONT, San Mateo Co., Cal.—John P. Lawlor, 372 7th Ave., San Francisco, at \$5875 awarded contract by town trustees to improve four streets in Belburn Village, involving pave; walks and gutters. Other bids: W. O. Tyson, Redwood City, \$6048; W. A. Dontanville, Salinas, \$7335.

CLARK COUNTY, Nevada—Nevada Paving Co., Reno, at \$32,799.56 awarded contract by State Highway Commission to furnish asphaltic fuel oil, apply and mix with crushed rock or crushed gravel surface from Crystal to West Slope Mormon Mesa, a length of 20.2 miles. Engineer's estimate, \$39,977.09.

AMADOR COUNTY, Cal.—Until September 17, 2 P. M., bids will be received by State Highway Commission to grade and surface with untreated crushed gravel or stone, 4.3 miles between Amador City and Martell.

See call for bids under official proposal section in this issue.

MONTEREY, Monterey Co., Cal.—City Engineer Howard D. Severance instructed by city council to prepare plans for paving the following streets: Pacific St., from Martin to Decatur St.; Polk St., from Alvarado to Hartnell St.; Madison St., from Hartnell to Monroe St.; Pearl St., from Alvarado to Main St.; Munras Ave., from Pearl to Webster St.;

Larkin St., from Madison to the bridge near the high school.

AMADOR COUNTY, Calif.—As previously reported, bids will be received Sept. 17 by State Highway Commission to grade and surface with untreated crushed gravel or stone, 4.3 miles between Amador City and Martell. Project involves:

- (1) 11.5 acres clear and grub right-of-way;
- (2) 116,000 cu. yds. rdwy. excav. without classification (Loc. A);
- (3) 42,300 cu. yds. do (Location B);
- (4) 530,000 sta. yds. overhaul;
- (5) 3,307 cu. yds. struc. excav;
- (6) 13,100 cu. yds. untreated crushed gravel or stone surfacing;
- (7) 280 cu. yds. class A cem. conc. (structures);
- (8) 23,009 lbs. bar reinf. steel (struc.);
- (9) 736 lin. ft. 8-in. corr. metal pipe;
- (10) 90 lin. ft. 12-in. do;
- (11) 2,726 lin. ft. 18-in. do;
- (12) 434 lin. ft. 24-in. do;
- (13) 932 lin. ft. 30-in. do;
- (14) 406 lin. ft. 36-in. do;
- (15) 188 lin. ft. 48-in. do;
- (16) 118 lin. feet corr. metal pipe (clean and relay);
- (17) 925 M. gals. water applied to surface;
- (18) 5.7 miles new hog-tight property fence;
- (19) 1,830 cu. yds. screenings in stockpiles;
- (20) 2.2 M. ft. b.m. redwood timber, dense select all heart structural grade;
- (21) 8.2 M. ft. b.m. redwood timber, select all heart struc. grade;
- (22) 237 sta. finish rdwy.;
- (23) 135 monuments.

State will fur. corr. metal pipe and cast steel frames and covers for drop inlets

SAN FRANCISCO—Bureau of Engineering, Department of Public Works, 3rd floor, City Hall, completes specifications to pave streets in Golden Gate Heights: Lawton St. bet. 12th and 17th Aves., etc. Estimated cost, \$58,000. Project involves:

- (a) 163,000 sq. ft. asphalt pavement, consisting of 6-in. waterbound macadam base with 2-inch asphalt concrete wearing surface;
- (b) 150,000 sq. ft. Emulsified asphalt pavement, consisting of 6-in. waterbound macadam base with 2-in. emulsified wearing surface;
- (c) 19,000 lin. ft. armored conc. curb;
- (d) 38 brick catchbasins;
- (e) 1 catchbasin to be reset;
- (f) 900 lin. ft. 10-in. V.C.P. culverts;
- (g) 5,000 lin. ft. 6-in. V.C.P. side sewers.

KING CITY, Monterey Co., Cal.—Until September 3, 8 P. M., new bids will be received by J. A. Wasson, city clerk, (6) to improve portions of First St., involving grading; hyd. concrete curbs; 5-in. hyd. cem. conc. pavement. 1911 Act. Bond Act 1915. Bids of A. J. Raich of San Jose at \$4191 rejected. Certified check 10% payable to city required with bid. Plans on file in office of clerk. Howard Cozens, Court House, Salinas, engineer.

LAWNSDALE, San Mateo Co., Cal.—Until September 8, 8 P. M., bids will be received by B. A. Weisenberger, town clerk, to improve Jewel Ave., involving grading; waterbound rock macadam base pavement with oil and screening surface; conc. cem. conc. curbs and gutters; steel reinforced cem. conc. culvert; cem. conc. storm water catchbasins and storm water manholes. Certified check 10% payable to town required with bid. Plans obtainable from George A. Kneese, engineer, Court-house, Redwood City.

OFFICIAL PROPOSALS

NOTICE TO BIDDERS

(Improvements — Naval Radio Compass Station—Eureka)

SEALED BIDS, indorsed "Bids for Improvements at the U. S. Naval Radio Compass Station, Eureka, California, Specification No. 6304," will be received at the office of the Public Works Officer, Navy Yard, Mare Island, California, until 11:00 o'clock A. M., on September 10, 1930, and then and there publicly opened, for fire protection pipe lines and hose housings, and a septic tank.

Specification No. 6304 and accompanying drawing may be obtained on application to the Commandant, Navy Yard, Mare Island, California.

Deposit of a check or postal money order for \$5.00, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawing and specification.

A. L. PARSONS,
Chief of Bureau

August 18, 1930.

NOTICE TO CONTRACTORS

(Radio Station Improvements—Point Reyes)

SEALED BIDS, indorsed "Bids for Improvements at the Naval Radio Compass Station, Point Reyes, Calif., Specification No. 6305," will be received at the office of the Public Works Officer, Navy Yard, Mare Island, California, until 11:00 o'clock A. M., on September 10, 1930, and then and there publicly opened, for a septic tank, repairs to plank road, and a fire protection system at the U. S. Naval Radio Compass Station, Point Reyes, California.

Specification No. 6305 and accompanying drawing may be obtained on application to the Commandant, Navy Yard, Mare Island, California.

Deposit of a check or postal money order for \$5.00, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawing and specification.

A. L. PARSONS,
Chief of Bureau

August 18, 1930.

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M. on September 17, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications thereto, to which special reference is made, of portions of State Highway as follows:

Amador County, between Amador City and Martell (X-Amad-65-B), about four and three-tenths (4.3) miles in length, to be graded and surfaced with untreated crushed gravel or stone.

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bid will not be accepted from a Contractor to whom a proposal form has not been

issued by the Department of Public Works.

Plans may be seen, and forms of proposal, bond, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.
DEPARTMENT OF PUBLIC WORKS,
DIVISION OF HIGHWAYS.

C. H. PURCELL,
State Highway Engineer.

Dated August 20, 1930.

(August 25-Sept. 1-8-15)

NOTICE TO CONTRACTORS

(Improvements at Naval Radio Station—Point Montara)

SEALED BIDS, indorsed "Bid for Miscellaneous Repairs at the Naval Radio Compass Station, Point Montara, California, Specification No. 6306" will be received at the office of the Public Works Officer, Navy Yard, Mare Island, California, until 11:00 o'clock A. M. on September 10, 1930, and then and there publicly opened, for the completion of picket fence, added fire protection, replacement of the coal shed, and the enclosing of porches at the quarters of the radio personnel at the Naval Radio Compass Station, Point Montara, California.

Specification No. 6306 and accompanying drawings may be obtained on application to the Commandant, Navy Yard, Mare Island, California.

Deposit of a check or postal money order for \$5.00, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawings and specification.

A. L. PARSONS,
Chief of Bureau.

August 16, 1930.

The Division of Simplified Practice of the Bureau of Standards, Department of Commerce, has just announced that the standing committee of the industry for Simplified Practice Recommendation No. 8-29, Range Boilers and Expansion Tanks, has reaffirmed the existing schedule, without change, for another year. A survey of production, conducted prior to the revision meeting indicated the degree of adherence to the recommendation to be approximately 98 per cent for Range Boiler and 99 per cent for Expansion Tanks.

"AIR TERMINALS" COVERED IN BOOKLET

Aviation's future, it is generally agreed, is as much dependent on the development of ground facilities as on advance in the design of planes and motors. Today there are relatively few airports equipped efficiently to serve the most modern commercial and transport ships, a situation which acts as a definite brake on aviation progress.

A concise, authoritative and attractive summary of airport needs and services is contained in the booklet, "Air Terminals," recently published by the Portland Cement Association. For a number of years this Association has been carefully watching the development of airports. Now, on the basis of experience in the use of concrete and other cement products in airport equipment, "Air Terminals" is offered as a guide to commercial and civic airport operators. Among the subjects discussed are airport design, buildings, runways, lighting facilities, drainage, hangar floors and aprons. There is also a section on European experience with concrete airport installations.

"Air Terminals" has been published opportunely at a time in which definite information about airport development is a real need. Copies may be had, without charge, on application to the Portland Cement Association, 33 West Grand Avenue, Chicago.

WHAT IS A CONTRACTOR?

There is no class of work that takes on as varying qualities as contracting. It appeals to men who are optimistic and to those who have born in them the longing to do things. The contractor must be a man first and possess the most uncommon thing, "common sense," and he must have "physical sense," the sense that tells a man without calculating wherein lies the center of gravity; the sense that tells a man values without estimating; the sense that tells a man quantities without measuring. He must have magnetism in order to gather his men about him. He must have a reputation for justice in order to hold them. He must be forceful in order to inspire energy in others. He must have a lawyer and a buyer. He must have the ingenuity of an inventor and the grasp of a Field Marshal. He must also know when not to be a politician. He must be a financier and an advertiser, and last but not least, a prophet.—Exchange.

PRESENT AND FUTURE TREND IN REAL ESTATE

Significant conclusions of present and future trends in real estate and in certain classes of building operations have been reported by Thomas S. Holden, vice-president of the F. W. Dodge Corporation, New York City, following the observations which Mr. Holden made of these trends while attending the Toronto convention of the National Association of Real Estate Boards. Mr. Holden summarizes the three following conclusions:

(1) Real estate men and real estate boards are assuming the position of intelligent leadership in planning and controlling the growth of their communities.

(2) Architects and contractors, including those who handle small residential projects as well as large commercial projects, are going to find it more and more necessary to ally themselves with real estate men and to render better service by better understanding of real estate economics.

(3) The present tendency is apparently toward larger, better financed, more responsible home builders and subdividers. On the higher grade projects the services of architects are being used more and more. In the less expensive projects architects can probably render valuable service if they take up plot planning and cost reduction methods. There is a tendency in the secondary market to minimize the importance of dealers and builders and to increase the importance of realtors, subdividers and development companies. Expert planning talent is needed in this field, even for projects using mass production houses.

NEW HEAVY-CURRENT HIGH VOLTAGE MAGNETIC SWITCHES

The General Electric Company announces the CR-7006-T-5 oil-immersed magnetic switches for heavy-current duty in controlling large sizes of motors. The new switches supersede the General Electric CR-7006-T-3, 150-ampere magnetic switch. They consist of a three-pole, 200-ampere, oil-immersed contractor, a temperature-circuit relay, two current transformers and an undervoltage relay all mounted on a suitable floor-mounted framework, which is built with steel front.

Instantaneous undervoltage protection is obtained with one form when used with a drum switch. Time delay undervoltage protection is obtained with the other form when used with momentary contact type push button control.

For standard motors the switches are rated 750 horsepower at 2500 volts, and 1200 horsepower at 4000 volts. They have an approximate weight of 325 pounds and require 5½ gallons of oil each. These switches may be used on 6600 V, 750 horsepower maximum, by providing 6600 V current transformers.

Z. S. Leymel, mayor of Fresno, advocates a bond issue for \$1,000,000 to finance erection of a new civic auditorium.

The question has been brought to the front through Fresno's effort to bring the state convention of the legion here in 1932. The present auditorium is deemed inadequate to accommodate the convention crowds. The mayor said that Fresno could build an auditorium at a cost ranging between \$1,000,000 and \$1,500,000. He referred to the auditoriums of Sacramento and Stockton, which cost in the neighborhood of \$1,000,000 and each of which will accommodate approximately 8,000 persons.

"Adoption of a plan whereby employees would be paid an annual instead of a daily wage would tend to bring security to workers and serve as a major remedy for unemployment," President William Green of the American Federation of Labor, believes.

Green explained in an interview with the United Press that employment on an annual wage basis would cause employers to spread out their work in such a way that lean market periods would not result in many men being without jobs.

The responsibility for providing jobs lies primarily with employers, organized labor's chief claim. He put up to them a demand for fewer hours of work, fewer days a week and advance planning or production to provide employment during seasonal let-downs. High wages must be maintained to keep up the markets for the goods, he said.

Green saw "some indication of slight improvement" in the present employment situation, but predicted that recovery would be slow.

WESTEEL PRODUCTS ORGANIZED BY A. J. SWANSON

Arthur J. Swanson announces formation of the Westeel Products Company with main offices in the Rialto Building, San Francisco. Sales branches are to be established in Los Angeles and Seattle.

The Westeel Products Company will serve eastern manufacturers of building products as western branch and factory distributors. Among the manufacturers which the company now represents on the west coast are the Knapp Brothers Manufacturing Company of Chicago, makers of interior sanitary metal trim; the Northwest Steel Products Company of Chicago, manufacturers of steel shelving, lockers and Nemo expanded steel baskets and the Receivador Sales Company of Grand Rapids, makers of "The Automatic Servant."

Swanson, for eleven years was connected with the North Western Expanded Metal Company of Chicago and for two years served as general manager for that company. He left that concern when it was acquired by the United States Gypsum Company. Prior to being in Chicago, Swanson was district manager for the North Western Expanded Metal Company in the western states for five years, with headquarters in Los Angeles.

A "Pittsburg" Automatic Water Heater installed in the Home indicates high quality throughout.

Recommended and specified by all the leading architects, plumbers and builders.

Consider the high merit of the Pittsburg coupled with "Pittsburg Perfect Service."

"Hot water quick as a wink."

Pittsburg Water Heater Co.

Makers of "Pittsburg Automatic"—"Bungalow Automatic" Storage Systems and "Lyon" Tank Water Heaters.

Record Partnership Agreements, Warning of State Registrar

Dresser drawers, the family clock or the mantel in the front room at home are not official or legal depositories for such important documents as partnership agreements in the construction industry. At least, not in California.

No matter how handy such receptacles may prove to the licensed contractor, the State law provides that such partnership agreement, particularly where a fictitious name is involved, must be filed with the clerk of the county in which the signatories reside, it is pointed out by James F. Collins, Director of the State Department of Professional and Vocational Standards and Registrar of Contractors.

Partnership agreements between persons engaged in the construction industry of the State, are not agreements if they are merely drawn up and signed by the parties involved and then tucked away somewhere at home or in the office, Collins said. They should be duly witnessed and filed with the proper authorities as a matter of official record.

Hearings conducted by the Section of Contractors' Registrations in matters involving complaints against contracting concerns doing business under partnership agreements has brought out the startling fact in several instances that no such agreement legally existed.

The partners involved had simply signed papers among themselves and put the documents away without recording them. Such a course, in at least one instance, completely altered the status of the case that was up for adjudication and resulted in a decision adverse to the contractors.

Many partnerships in the California building industry are operating under firm designations that do not show the true names of the persons in the partnerships. In all such cases, the Registrar pointed out, the law requires that the parties involved file a certificate with the county clerk, stating the name in full and the place of residence of all persons in such partnership and the firm name that has been adopted. In addition the text of such certificate must be published once a week for four weeks in a newspaper in the county. An affidavit showing that such notice has appeared in the newspaper must be filed with the county clerk within 30 days after the completion of such publication, Director Collins said.

A six-hour working day is advocated by A. F. Whitney of Cleveland, Ohio, president of the International Association of General Chairmen, Brotherhood of Railroad Trainmen, as the logical solution to the unemployment situation.

FACTORS OF ARCHITECTURE

In a campaign to acquaint the American public with the equities of architecture the Illinois Society of Architects has assembled a summary which it considers as embracing the seven potent factors of the architectural profession. These seven points are:

1—Natural Ability consisting of visualizing power; an aesthetic sense; mathematical understanding; judicial mind; qualities of leadership.

2—Integrity to select materials on the basis of scientific merit, artistic adaptability and relative cost, to render an impartial interpretation of plans and specifications; to form correct judgment between disputing contractors; to use unceasing vigilance to the end that the client receives everything due him, and at the same time, that the contractor and craftsmen are justly treated.

3—Educational background consisting of—training in social science; a working knowledge of the history of building down through the ages; training into an understanding of the strength and mechanics of materials; training in the art of design and depiction, including both draftsmanship and written word; travel and study of the masterpieces of architectural art.

4—Practical experience as: a student employee; a graduate office worker; and as a practicing Architect, including the handling of the business of building, with required incidental knowledge of contract and lien laws.

5—Working Library containing:—a indexed file of current architectural magazines; text books on structural and aesthetic subjects; many architectural books required for immediate use; an index of all the more important architectural books and where they can be consulted; a completely indexed catalog file of building materials and equipment.

6—Organized assistants, especially trained and equipped for each department of work required to be handled by an Architect.

7—Impersonal professional attitude toward each building problem; no financial interest, either in building materials or on contracting, makes possible skilled, unbiased judgment; Architect's remuneration not contingent on whether advice given pleases or displeases the client or the contractor—in other words, expert judgment expressed without personal interest.

An addenda to this declaration of principles is as follows:

Justice demands that investment be adequately remunerated. Is there any difference between investment in the training of talent than in the investment in mechanical equipment. It is not considered unreasonable to charge \$100 a day for the use of a \$20,000 excavating machine, yet \$20,000 is a

small estimate of the cost of adequately preparing an architect for service. Surely the services of an architect are of more actual economic value than the services of an excavating machine.

G. G. BRIDGE BONDS TO VOTERS IN NOVEMBER

Final arrangements to place a bond issue of \$55,000,000 before the voters for the construction of the Golden Gate bridge have been made by the bridge directors.

It was definitely decided to hold the bond election in conjunction with the general election, November 4, it being pointed out that a special election for the purpose would involve considerable expense.

A committee of five was appointed to handle details of the campaign to put the bonds across. It consists of William P. Filmer, president of the Golden Gate Bridge and Highway District; Alan McDonald, Francis Keestling, George Harlan and J. B. Strauss, chief engineer in charge of construction.

Strauss presented his final report illustrating the type of bridge, length of span and all the other details. This report was referred to a special committee for checking as to accuracy on all points and will be released to the public tomorrow morning.

Directors of the district authorized payment of \$30,000 in fees to Strauss, \$15,000 of which will go to his associates.

An information bureau for the bond campaign has been established on the mezzanine floor of the de Young building, San Francisco.

S. F. BUILDING IN AUGUST TOTALS \$1,242,128

Building permits issued by the San Francisco Department of Public Works, Bureau of Building Inspection, during the month of August totaled 569 for improvements involving an expenditure of \$1,242,128. For the corresponding period in 1929, records of the department show 629 permits granted for improvements costing \$3,095,638.

For the past eight months 464 permits were granted, the work involved costing \$14,877,893 as compared with 426 permits for the corresponding period in 1929 when the total registered \$25,289,980.

Following is a segregated listing of the August, 1930, activities

Class	No. of Permits	Est. Cost
A	—	\$ —
B	1	92,000
C	2	203,200
Frames	164	30,000
Alterations	104	926,878
TOTAL	569	\$1,242,128

BUILDING INSPECTORS ARE OVERWORKED AND UNDERPAID

The little appreciated but enormous responsibility of the building department official and the value of his work to the public at large was the subject discussed by Walter C. Voss, professor of building construction, Massachusetts Institute of Technology, in one of the principal papers delivered at the 18th annual conference of the New England Building Officials in Boston.

Prof. Voss spoke not only of handicaps under which building officials work but also emphasized that they are seriously underpaid. As an illustration of the much higher remuneration of those employed by private individuals than that received by public officials he said:

"Recently a group of men, interested and informed owners, architects, engineers and contractors, planned and consummated the erection of a \$2,000,000 office building. They needed inspection to insure careful justification of all expenditures, so they hired an inspector—the general superintendent—at \$10,000 a year. This building was continuously under the eye of this able man without any diverting influence. His job was one building, well built, on time. This building was completed in about sixteen months, at a cost of \$13,333 for superintendence—or inspection—about six-tenths of one per cent of the total cost of the building.

"This particular building was in a district assigned to a building department inspector who had during the time this one building was erected the inspection of 881 building operations, including fifteen major building projects, involving the expenditure of \$11,692,941. His salary for the sixteen months was \$3466, or only three-hundredths of one per cent of the total cost of major construction over which he was obliged to keep a protective eye.

"The first man was expected to protect interests of, let us say, about fifty people. The second man, a public employee, was expected to protect the interests of 800,000 people, or approximately 150,000 taxpayers. The first man spent his entire time on one building, while the second man could not possibly spend more than 5 per cent of his time on the same building.

Over-Emphasis on Low First Cost

In his analysis of some of the difficulties encountered by the building official in conducting his work and in providing for efficient administration of his department, the professor stated:

"This department, with its efficiency depends entirely upon public fancy and whim. An interested and informed public may make the department unusually effective, whereas disinterestedness and ulterior motive may practically void all of its effectiveness. The public is infected with a first-cost-economy complex. Their by-word is 'run everything as cheaply as possible' and, I might add, 'never mind about results.' The public looks at its tax rate first; it always orders its 'meal' from the right-hand side of the menu.

"Subsequent bills for an 'upset stomach' are not reckoned in the order. But should they not be? On the contrary, our first interested group orders its 'meal' with particular attention, first, to their 'stomach,' and later they consider their 'pocketbook.' Experience has taught them this valuable lesson in proper adjustment of cost and results. The public is con-

tent to 'howl' on tax rates for a while, fight the assessors for a possible cut in valuation and then is content to sit back and say, 'There's our donation; now don't bother me with anything until next year. When that time comes I'll try to cut it again.'

"Many attempts are regularly made by the constituted authorities of the public—their selected representatives—to show what becomes of this money, how meager it is to do a satisfactory job with—but to no avail. The is hurt, amused or must pay.

"It is your duty as members of the New England Building Officials Conference to strive for an enlightened public opinion of this matter. You should bend every energy and avail yourself of every opportunity to acquaint the public with the hazards and peril personally to all of our civilly elected officers to forget—gradually at least—the old dollar sign of first cost and to put their building departments on a sound, safe and effective basis

by gradually increased forces of able inspectors, who are paid a salary somewhat commensurate with the responsibility they are forced by the public and its officials to assume.

"The public will fight its increased tax rate and then soon forget the added initial expense, with experience in lower annual waste charges and damages.

In closing, I would say that no man who is not worth at least \$80 to \$100 a week should grace the profession of building inspector. I would further recommend that the total expenditure for building department construction inspection should not be budgeted at less than one-quarter of one per cent of the bona fide annual building permit values.

"Inspectors of building departments carrying their great responsibilities should not be confused with nor expected to be paid on the same basis as inspectors of other municipal departments whose responsibilities are only a fraction of that of the building department official."

MINUTE DATA ON THE BOULDER DAM—\$165,000,000 PROJECT

Due to the number of requests received daily at the office of Pacific Builder for data on the \$165,000,000 Boulder Dam Project, the following information is published in connection with that project, as officially issued by the Secretary of the Interior:

The construction of the Boulder Dam in Black Canyon where the Colorado River forms the boundary between the States of Arizona and Nevada. The construction will raise the present water surface of the river 582 feet. The dam site is about 30 miles southeast of Las Vegas, Nevada, a town with a present population of about 5,200, located on the Los Angeles and Salt Lake line of the Union Pacific System. The dam will be over 700 feet in height, the highest ever constructed, and will create a reservoir with a capacity of 30,500,000 acre-feet. It will serve to impound the surplus flood waters of the Colorado River for use in irrigation and will also regulate the flow of the river so as to improve navigation, and protect the lands in the valleys adjacent to the river below the dam and in the Imperial Valley in California, from overflow, water shortage, and silt accumulation, which are at present a great menace to successful agriculture.

The lake formed by the dam will be about 115 miles in length and have an area of 145,000 acres—the largest artificial reservoir in the world.

The development of about 1,200,000 horsepower hydroelectric energy at the dam, with 12 units of 100,000 horsepower each, which will make 663,000 firm or constant horsepower available at all times. The United States will construct the dam, outlet works, pressure tunnels, penstocks, power plant building and furnish and install generating, transforming and high-voltage switching equipment for the lessees and to the various purchasers. Rates of payment for energy have been fixed at 1.63 mills per kilowatt-hour for firm energy and ½ mill per kilowatt-hour for secondary en-

ergy. In addition, the contractors must pay for the power machinery and construct the necessary transmission lines.

The construction of an All-American Canal from Laguna Dam, or other suitable diversion dam, to connect with the present irrigation distribution system in the Imperial Valley in southern California, a distance of about 75 miles, and an extension to the adjacent Coachella Valley. Preliminary surveys and other studies have just been completed under a cooperative agreement with the Imperial and Coachella Valley irrigation districts, and the report is now being prepared. Present plans contemplate a maximum canal capacity of 15,000 second-feet. (Note: The Laguna Dam is already constructed and is located on the Colorado River about 9 miles northeast of Yuma, Arizona.)

It is expected that it will take seven years to complete the dam from the time construction is begun. It is proposed to install units of the power plant progressively as rapidly as demand for power develops.

Preliminary requirements having been met, Congress has made an initial appropriation of \$10,660,000 to provide for the first year's operations. It is proposed to spend this amount for the following purposes: (1) Construction of 3 miles of highway from a point 2 miles back of the river to the top of the cliffs, at the cost of \$300,000; (2) laying out the Government townsite and installing water and sewerage systems at a cost of \$100,000, and erecting an administration building for officers and living quarters for Government employees, both to cost \$125,000; (3) construction of 30-mile railroad from the Union Pacific to the dam site and the railroad down to the bottom of the canyon, estimated to cost \$2,500,000; (4) power for construction purposes which must be brought in from an outside power line, or a temporary power plant estimated to cost \$1,750,000 must be built; (5) an initial appropriation of \$5,000,000 for beginning construction work on the diversion

tunnels is included; (6) purchase of certain private properties in the reservoir site estimated to cost about \$500,000; and (7) to reimburse the reclamation fund for the amount expended to date on preliminary investigations the sum of \$385,000 is required.

It will take considerable time for flow tests and investigations, technical studies, preparation of designs and specifications and the issuance of advertisements, so that it will be nearly a year before contract can be let for construction of the dam. It is necessary to emphasize this in order to correct the general impression which seems to prevail that a large construction force is to be organized at once.

Field parties have been organized to stake out a final location for the construction railroad. Specifications will be prepared and contracts let at an early date. A permanent highway from the townsite to the dam site will be located and bids asked for its construction. The engineering forces in the Denver and Las Vegas offices will be built up from Civil Service eligible lists. Advertisements will be placed for purchase of power for construction purposes. If satisfactory bids are obtained, contracts will be awarded and construction of transmission lines begun by the contractor. If satisfactory bids are not received, a temporary power plant will be built near the dam site. The townsite will be laid out and contracts let for waterworks, sewer system, sidewalks and curbs, street surfacing, and buildings.

Following the present policy of the Department of the Interior, it is expected that all construction will be done by contract, in which event by far the largest number of men engaged on the work will be employed directly by the construction contractors, including practically all those in positions such as laborer, helper, cook, steward, skilled mechanic, storehouse-men, timekeeper, costkeeper, truck driver, foreman, construction superintendent, etc.

If done by contract, the contractors, and not the United States will purchase and furnish all construction equipment required on the work.

Materials required, such as cement, lumber (except form lumber), reinforcing steel, etc., and permanent operating equipment such as pipe, outlet gates, valves, etc., will be purchased by the United States, after appropriate advertisement.

Plans are being made for a town above the flow line of the reservoir for the housing of the workmen who will construct Boulder Dam and incidental works, and of their families and the normal industries necessary to their comfortable existence; within its borders will be the Government camp, and houses for the accommodation of Government employees and their families. The town will be located on Government land, and it is being planned as a permanent community. With the workmen and their families and those who are drawn to the dam site by the general activity, it is estimated that this town may have a population of some 4,000 people.

An office of this bureau has been established in Las Vegas, Nevada, in charge of a Construction Engineer. Communications regarding this project should be addressed to the Commissioner, Bureau of Reclamation, Washington, D. C., the Chief Engineer, Bureau of Reclamation, Wilda Building, Denver, Colorado, or the Construction Engineer, Bureau of Reclamation, Las Vegas, Nevada, but it is again emphasized that it will be a year or more before the major contracts can be let for the construction of the dam and appurtenant works.

STATE BUILDERS' EXCHANGE RE-ELECTS OFFICERS AT MEET

BY JOE OOGERS

Apprenticeship, license laws, building finance and re-election of the incumbent officers to serve for another six-month period, were features of the semi-annual conference of the California State Builders' Exchange, held in Richmond last Saturday.

More than fifty-five delegates representing every section of the state attended the conference, presided over by P. M. Sanford of Richmond, president of the state organization.

H. L. Sweeney of Santa Barbara, the principal speaker at the morning session, delivered a forceful address on the training of apprentices in the building industry. Sweeney scored the system of training in the public schools, declaring that in many instances the instructors were not properly prepared for the work of teaching the various crafts of the building trades.

W. H. George, president of the National Association of Builders' Exchanges and president of the San Francisco Builders' Exchange, declared that the tendency of banks and loan concerns was to discourage building. He stated that after investigation he learned that this was because they were afraid to loan money on buildings not built for permanency. George advocated that a special inspector be employed for all large buildings. With such an inspection, George declared, first class workmanship and good materials would tend to ease the money

market with regard to building loans.

George based of Pasadena, spoke in the proposed plan to secure legal regulation of building finance in California. A contest is now underway, formally announced, whereby students, either graduate or undergraduate, actively engaged in the study of law at recognized colleges of law within the state, are offered \$350 in prizes for the best plan on "How to Regulate Building Finance in California." The first prize is \$200, the second \$100, and the third \$50. Out of the papers submitted it is hoped to frame a law for presentation at the next session of the State Legislature.

H. C. Morgan, chief deputy of the State Department of Professional and Vocational Standards, representing State Director Collins, told of the benefits of the contractors' license law and what his department was accomplishing for the good of the construction industry and the building public.

Other speakers included S. P. Koch, Berkeley building inspector, "Duke" Tilden of the Tilden Lumber Company, Jas. Pinkerton of San Francisco, Dan Wagner of Santa Barbara and D. L. Dawson of San Jose.

The convention closed with a banquet at the Hotel Carquinez where a program of entertainment was enjoyed. Community singing was lead by Archie Winchelo of the Richmond Builders' Exchange.

ARCHITECTS TO CONVENE AT DEL MONTE NEXT MONTH

Interesting business sessions coupled with a golf tournament, a visit to notable residences on the Monterey Peninsula and a program of varied entertainment, will be features of the Third Annual Convention of the State Association of California Architects to be held at Del Monte, October 10-11, it is announced by Harris C. Allee, general chairman of the convention committee.

Sessions will be held at the Hotel Del Monte, where special reservations have been made and special rates have been obtained by the convention committee.

The Friday morning session will be called to order by John J. Donovan of Oakland, chairman, following which delegates will be registered and the business session opened with reports of the officers.

At the noon luncheon, to be presided over by Frederick H. Meyer of San Francisco, Newton B. Drury will address the architects on the "Legitimate Group and Individual Publicity." This address will be followed by a round table discussion.

At the Friday afternoon session, presided over by Mr. Donovan, the reports of various committees will be considered. During this session ladies will be entertained with trip over the 17-Mile Drive, one of the wonders of the Monterey shore line.

In the evening the annual convention banquet will be held. H. C. Chambers of Los Angeles will preside. "Co-operation" will be the topic of discussion. A twenty-minute address will be made by a guest speaker yet to be announced.

Five-minute talks on "Co-operation" will be made as follows:

"Co-operation With Allied Arts," by C. M. Winslow of Los Angeles.

"Co-operation With Clients," by H. Roy Kelley of Los Angeles.

"Co-operation With Contractors," by Louis J. Gill of San Diego.

"Co-operation With Other Architects," by Chas. F. B. Roeth of Oakland.

"Co-operation With Architectural Education," by Warren C. Perry of San Francisco.

"Co-operation With Public Authorities," by Jas. Dean of Sacramento.

These talks will be followed by a musical program and solos by Eva Gruninger Atkinson, contralto; Phyllida Ashley, pianist, and Austin W. Sperry, baritone.

The Saturday morning session will be called to order by A. M. Edman of Los Angeles. This session will be devoted to round table discussions followed by an illustrated talk on "Gardens" by Myron Hunt of Los Angeles.

Immediately following this the golf tournament will be opened. A Putting Contest for the ladies will be a feature of this event.

In the afternoon the delegates and ladies will visit notable Pebble Beach residences.

A Golf Dinner will be featured in the evening, at which time the tournament prizes will be presented to the winners. A varied program of entertainment will be featured during the dinner.

THE OBSERVER

What He Hears and Sees on His Rounds

"The continued recession in building construction volume can be considered a heavy silver lining in the clouds which now hang over the industry."

This is the optimistic view one writer expresses in regard to the building industry, says the monthly digest of the Common Brick Manufacturers' Association of America. The writer points out that construction can be postponed but not avoided.

"The population of this country is increasing at the rate of 7,000 per day and they must be housed. Buildings continue to burn down and depreciation is exacting its toll constantly."

"When the unfavorable conditions surrounding the building industry today are remedied, there is bound to be a sharp increase to provide buildings which were postponed during 1929 and 1930."

"Another noted business authority, whose forecasts are considered to be unusually accurate, explains that in times of depression such as we are now witnessing, the chart of building volume is in the shape of a 'U'."

"He further points out, when conditions seem to reach a level, getting no better or worse, the bottom has been reached, so to speak, and an upward trend is bound to follow."

"Conditions in the building industry indicate most convincingly that the leveling-out period, representing the bottom of the 'U,' has existed for a number of months, and an upward trend may be expected very shortly."

"Conditions in the brick industry bear out this statement very closely. The volume of brick moved from the yards has been fairly constant for the past few months, with seasonal declines not as pronounced as in normal periods."

An employment service to take care of its trained workers, covering the entire country, has been put into operation by the cement industry. It is announced in Chicago by the Portland Cement Association.

This is believed by its sponsors to be the first attempt of a major manufacturing group to cooperate in solving its employment problems and to establish a clearing house for the services of its skilled employees.

The cement industry employs approximately 45,000 workers and is composed of 95 individual companies with 175 mills in 35 states. Most of these companies are members of the Portland Cement Association and are supporting the industry's employment program.

The United States Daily recently published a report that the building of new hotels in Switzerland is to be forbidden in all cities under 100,000 population until December 31, 1933. This law is an extension of the law of October 16, 1924, put in effect by the Swiss Federal Council. There are only four cities in the country, namely, Zurich, Basel, Geneva and Berne, with more than 100,000 population, so the law will affect chiefly the large tourist resorts where many of the finest hotels are located. "This measure is interesting to hotelmen of this country who could well wish for similar recognition and action by our government," says The Pacific Coast Hotel Weekly. "There is less concern with overproduction now, that is, for

the immediate future. There has been a definite check on the rampant construction of structures designed to be hotels, or something like hotels, but there is still the problem of filling existing hotels."

Under a reorganization of the engineering colleges of the University of California, the interests of civil, electrical and mechanical engineering will be administered by the faculty of a college of engineering of which Prof. Charles Derleth, Jr., has been appointed dean. The college of engineering will conduct four-year curricula separately in civil, electrical and mechanical engineering, each leading to the B. S. degree.

By administering these engineering groups by one faculty, with one dean, it is intended to offer to students the option to remain more than four years, thereby combining to a fuller degree simultaneous studies in civil, electrical and mechanical sciences. In this way students may remain five years or even six years, receiving the B. S. degree in a combination of engineering subjects.

Artists have taken another move to make themselves part of the business, says The Business Week. A uniform contract has been drawn up by representatives of the American Artists' Professional League and the American Art Dealers' Association. Besides stipulating the terms between exhibitors and artists, the new contract provides definite terms of sale, insurance, service, and charges.

Increase in electrical appliance sales is more than compensating electric light and power companies for the slowing up in the number of homes wired for electricity.

It is estimated that each electric refrigerator sold is equal in revenue to one new wired house. This year, while the number of homes wired is expected to drop to 800,000 from the 1929 figure of 880,000, electric refrigerator sales will reach 900,000, as against 630,000 in 1929. This means that, as far as revenue is concerned, there will be the equivalent of 1,700,000 homes wired—a figure about equal to that of 1924 which saw the largest growth in number of wired homes ever recorded by the industry.

Utility officials, told of these facts through an analysis by Electrical Merchandising, say they indicate clearly that intensive rather than extensive cultivation of the market is the answer to the slower increase in wired homes to which some economists have recently pointed a warning finger.

Grade crossing accidents and casualties show a reduction during the first six months of 1930, as compared with the first half of 1929, according to a report compiled by the Transportation Division of the Engineering Department of the State Railroad Commission.

There were 1398 accidents reported to the Railroad Commission during the first half of 1930, compared with 1425 during the same period of 1929, a decrease of 27 or 2 per cent. There were 99 deaths and 461 injuries in the first half of 1929, a decrease of 13 casualties or 3 per cent.

Based on the results during the first half of the year, 1930 will be the first period to show a decrease, compared to a preceding year, in the number of accident reports filed with the Commission. In 1929, there was an increase of 32 per cent in the number of accidents reported, compared with the year 1928, and an increase of 28 per cent in the number of casualties reported.

Of the 1398 accidents during the first six months of 1930, there were 1238 at so-called Class "A" crossings of public highways with main and branch lines of the railroad; 69 occurred at spur track crossings; 35 at private crossings; 53 in and along public streets between crossings; and two were minor accidents occurring at grade separations.

The American Radiator Company is launching a new accessory on the market. It is called the Radiatherm, and is a simple thermostatic device for automatically and individually controlling the steam supply to each radiator on two-pipe systems.

This new device effects independent and automatic temperature control for each room. As long as an adequate heating system is in operation, individual room warmth is uniformly maintained at whatever temperature desired. Thus, if the occupant of one room wishes to maintain a temperature of 80°, and the occupant of another room prefers 70°, both get that temperature automatically with the Radiatherm. In fact the Radiatherm does, automatically, exactly what would occur if an operator were continually watching a thermometer and opening and closing a graduated type of hand control valve to maintain a constant room temperature.

It is claimed by the American Radiator Company that Arco Radiatherm makes possible economy in fuel to the extent of 20% to 40%, as compared with systems employing hand-operated valves, because it maintains the temperature at predetermined constant regardless of changes in pressure or outside temperature. The radiation of a building naturally is figure to take care of the coldest winter weather. Given ample steam supply, it is easy to heat satisfactorily during the relatively few days of the year when the full capacity of the radiator is required. The difficult part to handle, however, is during the greater portion of the heating season when the weather is mild and when overheating is so objectionable and wasteful. During this period only a very small portion of the radiator is required to hold the temperature at about 70°—which is usually desired. The Radiatherm sees to it that only that much of the radiator is heated, and so saves a great amount of fuel.

The Arco Radiatherm was ready to be placed on the market a year ago, but the American Radiator Company preferred to put the device through a vast number of tests both at their Detroit and Yonkers Laboratories, to make certain that the apparatus was trouble-free. To test their performance under actual conditions the American Radiator Company installed five hundred Radiatherms in their own executive building in New York last winter. After a season of service, these controls have proved so successful that the tenants would strenuously object to returning to hand-controlled valves. American Radiator executives admit that in a very short time hand valves will be discarded in favor of efficient, comfort-assuring, fuel-saving Radiatherms, and that building owners will use this feature of automatic control as an argument in renting space.

It has been estimated that Arco Radiatherms will pay for themselves in two or three seasons of service, through the fuel they save.

ALONG THE LINE

According to word from Portland, Ore., Ernest H. Meyer, 50, president of the Charles R. McCormick Lumber Company in Oregon, who recently suffered a paralytic stroke, is in a comatose condition in a Portland hospital. His condition was precarious, attendants at the hospital announced.

Jonh S. Oursler has resigned as vice-president of the Carnegie Steel Company, effective October 1st. Ill health is given as his reason for resigning.

More than \$2,600,000 in highway work was placed under contract in August and \$1,350,260 in contracts are pending and advertised. B. E. Meek, State Director of Public Works, reports. Meek declared it is the desire of the department to keep highway construction at the peak in order to help employment during the fall and winter months.

Frank S. Allen, 70, nationally known architect, died in Pasadena, August 26. Mr. Allen was known for his contributions to American museums of exhibits obtained in excavations in Egypt. In California during the past 40 years Allen designed many schools. He designed the San Jose State College, the San Diego High School, the San Pedro High School and many school buildings in Pasadena.

Henry Sidney Smith, 90, former Alameda County Surveyor, civil engineer and for years connected with the Piedmont city government, died August 25.

Smith served the Southern Pacific and other big companies as a civil engineer for many years. He was with the engineering corps of General Sherman in the Civil war. He was for years engineer for the Mountain View cemetery company.

Resignation of William G. Clyde as president of the Carnegie Steel Company, effective September 1, has been accepted by the board of directors. The board announces I. Lamont Hughes, vice-president in charge of operation of the United States Steel Corporation, would succeed Clyde. In resigning, Clyde said he had done so because of ill health. Ambrose N. Dietl, vice-president of the Carnegie Steel Company, will take Hughes' office with the steel corporation.

BUSINESS MUST MAINTAIN WAGE SCALES

Wages must be maintained through the present situation in American business, declared Herbert H. Lehman, Lieutenant Governor of New York, and former banker of New York City, before the annual convention in Buffalo of the New York State Federation of Labor.

"If there ever was a time for full cooperation between employer and worker this is the time," said Mr. Lehman. "Nothing will be gained by a reduction of wages."

Recalling that "leaders in industry some months ago solemnly pledged their word to maintain wages and working conditions," Mr. Lehman declared they "must go a long step further at this time. They must organize their industries against any program of wage cutting."

TRADE NOTES

The operations of the San Francisco branch of S. T. Johnson Co., manufacturer of oil burners and fuel oil, with headquarters office and factory in Oakland have recently been expanded to include the distribution of fuel oil. Heretofore oil burners only were handled from San Francisco. The payroll has been increased, and four oil trucks are now operated from the San Francisco branch which has recently been moved from 1337 Mission Street to 585 Potrero Avenue.

Ira W. Coburn, contractor and builder, formerly located in the Hearst Building, has moved to larger quarters at 2048 Market street. The removal to the new quarters was necessitated by the fact that Coburn desires to render a more complete service in the new location.

Herrick Iron Works has purchased a block of property extending from Seventeenth to Eighteenth streets between Campbell and Wood streets, adjoining the present plant in Oakland for future plant expansion.

Construction developments, company officials announce, will not be undertaken for about six months.

J. H. Baxter & Co., dealers in poles, piling, lumber and cross-tied material, announces the removal of offices on September 1, to larger quarters to 333 Montgomery street, San Francisco.

Notice of intention to sell has been filed with the county clerk at Santa Cruz by the Olympia Sand Company, a corporation. The sale will be made to the Atlas Olympia Co., Ltd., and will include bunkers, bucket elevators, loaders, chutes, conveyors, and other apparatus and equipment at the sand pits at Zayante in Santa Cruz county. The sale will be consummated at the Stock Exchange Building, San Francisco, on September 8.

TO REGULATE MORTUARIES AT RENO

The city council of Reno, Nevada, has adopted an ordinance forbidding the opening of any mortuaries in Reno without the consent of 65 per cent of the property owners and residents in the affected block. Such consent must also be approved by the city council. The ordinance also prohibits the establishment of such places except in specified locations and under mandatory conditions.

Opponents of the ordinance asserted at the session of the council that the ordinance is drastic, practically prohibitive, and gives the two existing mortuaries a monopoly on the local undertaking business.

YOUNGSTOWN IRON PUDDLERS GIVEN PAY CUT

Iron puddlers working under the sliding wage scale of the Amalgamated Association of Iron, Steel and Tin Workers, will receive a reduction of several cents a ton, under the monthly settlement announced at Youngstown, Ohio, Aug. 30. The average price of bar iron was found to have been \$180 a hundred pounds during the July-August period as compared with \$190 in the May-June period, resulting in the reduction of wages from \$14.30 to \$10.60 a ton.

TRADE LITERATURE

Earth-moving, road-maintenance and snow-removal equipment for use with tractor power is described and illustrated in a 32-page general catalog, No. 280, issued by the Hiker Mfg. Co., Springfield, Ill.

Engineering data on bucket elevators of all types, bin gates, track hoppers and feeders, steel apron and pan conveyors, weigh larries, screw conveyors and other types of bulk material handling equipment are given in catalog 262 of the Chain Belt Co., Milwaukee, Wis.

In-Cel-Wood Is New Insulating Board Product

A new-comer in the insulating board field, In-Cel-Wood is now being introduced by the Cornell Wood Products Company of Chicago.

It is announced that "In-Cel-Wood" is made entirely of new wood fibre which has not been cooked or chemically digested, and which brings to the board all of the well-known insulating properties of wood, together with the long life which can be anticipated when the fibre is not chemically treated.

"In-Cel-Wood" is offered in the usual insulating board sizes and is a full one-half inch thick. "In-Cel-Wood Lath," for use as a plaster base, is also offered and is made with ship-lapped edges to reinforce the joints and to reduce heat leakage. The unusually high plaster bond of 240 pounds per square foot is claimed for In-Cel-Wood. It is also noteworthy that the board combines an unusually high strength with its light weight of only 600 pounds per M square foot and its low thermal conductivity of .32 B. T. U.

Another feature of the product is the appearance of the board. It is a light cream color, smooth on one side and lightly textured on the other. The board is recommended for interior work where no painting or other adornment is planned. This same soft surface, the manufacturers claim, makes the product an effective sound deadener.

BIDS ASKED ON BOULDER DAM POWER PROJECT

Bids will be considered by the U. S. Bureau of Reclamation at Denver, Colo., on September 29 to construct transmission lines and a power plant in the vicinity of Boulder Dam, for furnishing of power during the construction of the dam. Alternative proposals for the construction of one and two transmission lines will be received. Bids are to be accompanied by a \$50,000 guarantee. Performance bond in the sum of \$300,000 will be required.

HEARING POSTPONED

Hearing on the application of the city of Stockton for permission to construct a subway under the Southern Pacific and Western Pacific Railroad tracks in Charter Way, has been postponed by the State Railroad Commission from September 4 to December 2. The project, according to tentative estimates, will cost \$20,000, of which the railroads are to pay one-half and the city of Stockton the remaining half.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1864)

R-3190-S SALES ENGINEER, graduate in civil engineering, not over 30 years old, to develop the sale of steel bars and building materials. Experience must be in construction or sales, preferably both. Apply by letter with details of experience, education, etc., including photo. Salary open. Location, Pacific Coast. Headquarters, San Francisco.

R-3202-S GENERAL DRAFTSMAN, not over 40 years, familiar with heating, ventilating, plumbing and electrical layouts. Must be able to write specifications. Salary \$220 mo. Permanent. Location, San Francisco.

R-3246-S RESEARCH CHEMIST, technical graduate with some experience in paint testing, for similar work in industrial laboratory. Salary \$175-\$200. Apply by letter with reference and photo. Location, S. F. K-312-W-1562-S SAFETY ENGINEER, technical graduate, mechanical or electrical. Should have had a varied engineering experience in industrial safety problems and understand the rating of risks for casualty insurance. Work will include many public relations. Salary \$7000 year. Apply only by letter. Location, New York, and some travelling.

R-3309-S ENGINEER, mechanical or electrical, not over 30 years, with 3 to 5 years' experience on hydro-electric plant operation for service and testing work. Must have mechanical skill, agreeable personality and be willing to travel. Salary about \$175 month and expenses in the field. Apply by letter. Headquarters, San Francisco.

R-3310-S STRUCTURAL STEEL DETAILER, neat and accurate, for temporary work. Salary \$175-\$200, depending on experience. Location, San Francisco.

W-1271-C-S DIRECTOR OR PERSONNEL for national concern. Will have entire charge of personnel throughout the United States, also employment, payrolls, insurance, pension systems, etc. Apply only by letter. Location, Middlewest.

PROFESSIONAL SELF-RESPECT

Contrasting with the events of the engineering competition which the city of Lima staged a few months ago comes the story of an attempt to conduct a similar competition at Phoenix. The city authorities invited the local engineers to bid on the engineering services for a sewer and sewage-disposal enterprise, but the engineers in this case took counsel with their self-respect and their professional ethics. The example of the Lima case having given a convincing picture of the immorality of such bidding, they declined to bid, but instead addressed the city council and set forth the unwisdom of attempting to engage engineering services by such a method. The representations bore fruit, we are glad to say, and the authorities selected engineers by direct choice. Evidently it is not impossible to lead city officials in the right direction if the proper methods are used and a firm attitude based on sound convictions is maintained by engineers. The Phoenix action will have emulation, as it deserves. In time, we may hope, the competitive-bidding evil may thus be eradicated.—(Engineering News-Record.)

USES AND CHARACTERISTICS OF MARBLES ARE TOLD BY U. S. BUREAU OF MINES IN CIRCULAR

Building and monumental marbles should have the quality of withstanding weathering and thus retaining their attractive appearance, the United States Bureau of Mines, Department of Commerce, points out. For exterior use qualities of endurance rank equally in importance with appearance. For such outdoor uses, therefore, marbles should be strong, uniform, close-grained (though not necessarily fine-grained), relatively nonabsorptive, and free from such impurities as may stain or corrode the surface. While uniformity in color was once desirable, the present tendency is toward blending of mixed colors.

For interior decoration, appearance is the prime factor determining the value of marble, say Dr. Oliver Bowles and D. M. Banks, in a report just published by the Bureau of Mines. Both pure white and variously colored marbles are used for this purpose. Interior marble is widely used for floors, steps, baseboards, columns, balusters, wall panels, wainscoting and arches. That used for floors and stair treads should be reasonably resistant to abrasion. Brecciated marbles, which consist of angular fragments cemented together in nature, are widely used for columns and wainscoting. Most marbles of this type are imported, as only a limited amount has been produced in the United States up to the present time. Verd antique is popular for interior work. Onyx marble is also popular for interior decorative use, as it possesses a waxlike appearance and an attractive banding. It also finds wide use for the manufacture of gear-shift balls, lamp and inkwell bases, and gift-shop novelties. Interior marble is also used in various minor ways, such as for table tops, lavatory fittings, and sanitary work generally.

Statuary marble is the most valuable variety quarried. It must be pure white in color, uniform and usually fine-grained in texture, somewhat translucent, and must possess a marked adaptability for carving. Numerous statuary and decorative marbles from American quarries are now on the market, each having its own particular name.

Waste Marble

Broken or waste marble is used for terrazzo, stucco, riprap, lime manufacture, and for fluxing and chemical uses.

The color of a marble is one of its most important physical properties. It is governed by the nature of the constituents. Marbles consisting of pure calcite or dolomite are white, whereas green is the prevailing color of verd antique, which consists chiefly of serpentine. However, it is sometimes mixed with red. Variations from the white color of a pure marble are owing to admixtures of foreign substances. Such impurities may be uniformly distributed and thus give uniform coloration, or they may be present in bands or streaks, giving clouded or otherwise nonuniform colors. Very beautiful banded effects are obtained by sawing veined marbles in certain directions.

The causes of some colors in marbles are easily determined. Black and grayish shades are attributed to carbonaceous matter, which is usually present as fine scales of graphite; red, pink, or reddish-brown shades are mainly due to the presence of manganese oxides or to hematite; yellow-brown, yellow, or cream colors are caused by minute grains of hydrous

oxide of iron, limonite. Other colors, such as the bluish tint found in some beds of white marble, are difficult to explain.

Highly colored marbles are usually those that have been brecciated or fractured, subsequent consolidation being accompanied by infiltration of coloring material from surrounding soil and rocks. They are mostly of foreign origin.

Compressive strength, transverse strength, and tensional or cohesive strength of marble depend largely upon uniformity of texture, closeness of grain, and amount of interlocking of crystals. Compressive strength is the quality most commonly tested.

Although strength alone is not a sure criterion of durability, knowledge of the capability of any stone to withstand stresses of various kinds is of great value if the material is to be used for purposes involving extraordinary strains. For certain purposes, such as bridge piers, abutments, columns, and base courses of very high masonry, crushing strength demands more than ordinary attention. Practically all commercial grades of sound white marbles are capable of sustaining many times the weight of structures in which they are ordinarily used, though some of the brecciated and veined marbles are too weak to sustain very heavy loads with perfect safety.

Interior Marble

capable of taking a high polish are most desirable for interior use; but many coarse-grained marbles are excellent for building and monumental purposes.

Workability is an important property, as the cost of quarrying and finishing marbles that are difficult to work is relatively high. Workability is governed partly by the hardness of individual grains and partly by the hardness of the mass as a whole. In some marbles the grains or crystals are easily torn apart, while in others that have interlocking crystals disruption is much more difficult. Thus, texture and cohesion have a definite relation to workability. If hard impurities are present, working may be very difficult. Although it may greatly increase the cost of working, hardness is a valuable property if the material is to be exposed to abrasion.

As marble is usually chosen for its inherent attractiveness, color is an important asset. If the texture or color of marble in a deposit varies, care should be taken to quarry in such manner as will tend to produce material that may be closely classified. Some variations in color, though slight may detract immensely from the market value. Lenses and bands of bluish material may pass irregularly through the white, thus occasioning excessive wear or necessitating classification in a lower grade.

Colors

Each bed in a deposit exhibits more or less constancy of color, some exhibiting more attractive colors than others. Therefore, desirable uniformity in color can usually be maintained by working each bed separately.

Colors may be permanent or may change after exposure to sunlight or weather. Severity of climate is an important factor in such changes. If changes take place the rock may no longer be of value; therefore, permanence of color is to be desired. The more highly colored marbles are most subject to color changes.

The success of a marble enterprise depends upon several important considerations quite distinct from the quality and extent of a deposit. A prospective marble producer should give careful consideration to market demands, prices, transportation facilities, competitive conditions, availability of labor, wage scale, and other economic questions, for which a reasonably satisfactory answer should be obtained before large sums of money are spent. Many enterprises have failed because these matters have not been fully studied.

Imported Marble

The important marble belts of the United States are found in the Appalachian region of the Eastern States and in the Rocky Mountains and Coast Ranges of the West. Deposits also occur in several of the Central States and in Alaska. In 1928 the principal States in order of production were: Vermont, Tennessee, Missouri, Georgia, Alabama, New York, and Massachusetts. These States together produced more than 95 per cent of the total for the year.

The principal countries from which marble was imported in order of value during 1928 were: Italy, France, Belgium, Germany, and Mexico. Imported marbles are used chiefly for interior decoration.

At least 80 per cent of the imports are from Italy and consist principally of white marble from the Carrara district. Imports from other countries are chiefly various types of colored marbles and the present tendency in imports is toward a larger proportion of the colored types. Red marbles from France, Spain, and Italy are imported into this country in considerable quantity. Monotone marbles, such as the Botticino from Italy and the Hauteville from France, are quite popular. Most of the marble obtained from Belgium is black. This is regarded as the standard black marble. The principal marbles imported from Germany are dark gray and white mottled and blotched with red. From Mexico has come almost the entire commercial supply of onyx marble or so-called Mexican onyx.

Marbles vary greatly in quality and therefore in price. The price range may run from \$1.50 to \$7, or even more, per cubic foot. American marbles for exterior building purposes average about \$2 per cubic foot in rough blocks. Prices of interior rough blocks at the quarry are quite variable ranging from \$2 to \$7, averaging about \$2.40 per cubic foot. Monumental stock in rough block averages about \$2 to \$3 per cubic foot, though not much domestic marble is sold in this form. Second quality Italian marble was selling in New York in 1929 at \$5.25 to \$5.75 per cubic foot, and French marble at \$3. Belgium black marble has sold in New York at about \$1.75 per cu. ft. in rough block form, though recently the price has been much higher.

Detailed information in regard to the physical properties of marble, the qualities affecting its workability and use, quarry methods and machinery, production, marketing, etc., is given in Information Circular 6313, which may be obtained from the United States Bureau of Mines, Department of Commerce, Washington, D. C.

HARRY PROBERT DEAD

Harry Probert, 56, treasurer and controller of the Calaveras Cement company and brother of Frank H. Probert, dean of the college of mining at the University of California, died in Berkeley August 28 after a prolonged period of illness.

He is survived by his widow, Minnie, three daughters, Mrs. Francis Westlund and Joan and Margaret Probert, two brothers and a sister.

TWENTY - FIVE CITIES REPORTING LARGEST VOLUME OF PERMITS FOR JULY, 1930, WITH COMPARISONS*

	July, 1930	July, 1929	July, 1928	June, 1930
1. New York	\$ 52,318,451	\$ 56,139,664	\$ 73,863,613	\$ 34,810,792

LIGHT STABLE LITHOPONE PROBLEM REPORTED SOLVED

Scientific tests of the light stability of lithopones, which long experience has demonstrated to be accurate in the highest degree, are described in a recent bulletin issued by the laboratory of The Grasseili Chemical Company, Newark, New Jersey.

The necessity for such tests is evident to those familiar with the fact that, as this technical bulletin points out, "Lithopone as first produced in the United States and for many years thereafter was a rather uncertain pigment." In fact, about its only characteristic which could be depended upon was its tendency to darken in sunlight, ranging from a dirty white to gray and even black.

Many master painters recall that they were summoned by indignant property owners to explain why the dazzling white of freshly painted structures had darkened to a deep gray under the action of sunlight, only to appear so immaculate when the sun had gone down.

The problem of light stable lithopone was solved, according to the Grasseili bulletin, "by research work which proved that the presence of chlorine in any of the raw materials used or the introduction of chlorine from any source to the raw pigment before calcination resulted in a lithopone which would darken in the sunlight."

That it was a long and discouraging task for the chemist to disentangle just why lithopone was so undependable from the standpoint of reaction to ultra-violet rays is evident from the statement: "Trial production of light resistant lithopone was started back in 1917-1918. These early efforts did not meet with success and a very considerable amount of chemical research was necessary to develop a well controlled and commercially practicable process."

There was, however, a recognized need for a raw material possessing certain valuable characteristics of lithopone, and paint manufacturers were persistent in their efforts to use

lithopone in view of the fact that the various objectionable properties were gradually being mastered by chemistry. But, in the early stages of its development, "a paint maker could never be sure whether a batch of paint made up from lithopone would have the expected consistency or whether it would liver. Also, the pigment frequently gave great difficulty in mixing with vehicles and binders," the bulletin relates. These difficulties have been overcome by improved chemical processes and advanced methods of manufacturing.

Quantity production of light stable lithopone is now an accomplished fact. Laboratory and service tests fully demonstrate that such lithopones are now entirely dependable, being stable enough to withstand exposure to sunlight for any length of time in any climate with no change in color. But there is no intention of claiming that lithopone will not undergo some degree of change in color when exposed under a powerful ultra-violet lamp for a prolonged period of time. Tendency to darken under ultra-violet light is somewhat dependent upon the vehicle used in making paint.

It was for the purpose of obtaining accurate data on light stability that the interesting tests were worked out by the Grasseili laboratory. "In case there is any question on the stability in sunlight," says the bulletin, "the most practical method of testing the pigment is to make it up in the vehicle or binder in which it is to be used and expose it under the conditions of use as nearly as they can be duplicated."

"The procedure in one of the tests is to expose the finished product containing lithopone to a mercury ultra-violet light in the laboratory and at the same time expose a standard under the same conditions. In the case of a paint, this is best done by preparing a panel, allowing it to dry before testing. If a particularly severe test is desired, the panel is placed un-

der water to a depth of about one-half inch. Under these conditions, the sample is exposed to ultra-violet light from a mercury arc placed about 12 inches above the panel. The relative darkening of the panel, as compared with the standard, is taken as a comparative measure of light stability.

Because of the rigid pre-testing of their products, leading manufacturers are being enabled to overcome not only the objections to lithopones which,

admittedly, once existed, but are fast overcoming the lingering prejudice in some quarters where unsatisfactory experience with the pigment resulted in reluctance to use of exterior paints containing lithopone. But now there is evident rapidly increasing interest in lithopone exterior paints, owing to the recognized fact that the brilliant whiteness of the pigment is retained under the most severe conditions of exposure.

BERKELEY REJECTS SCHOOL BOND ISSUE

For the third successive time, a Berkeley school bond proposal has gone down to defeat at the polls. The issue rejected at the last election was to provide \$2,690,000 to finance the erection of new schools and additions to standing school buildings.

POWER PROJECT AUTHORIZED BY FEDERAL BODY

The Federal Power Commission has authorized the California - Oregon Power Company to construct a 253,000-horsepower hydro-electric project on the Klamath River in Oregon. The first unit of the project is estimated to cost \$5,000,000 and construction will be started at once.

The commission has issued a preliminary permit to the Pacific Gas & Electric Company for the investigation of a prospective development of 34,000-horsepower on the Bear River, Calif. This project would supplement an extensive development now being constructed by the company on the Mokelumne river.

BYERS CLOSES PUDDLING OPERATIONS AT GIRARD

On August 15th A. M. Byers closed the Girard, Ohio, hand puddle mill, the largest single unit of hand puddle furnaces in the country.

Gradually the Byers Company has been consolidating its manufacturing of wrought-iron in the Pittsburgh district, anticipating the opening of the new mill recently completed on the Ohio River just outside Pittsburgh. This new mill will have an ultimate capacity of 45,000 tons a month compared with the Girard plant's of 5000 tons a month.

The Girard Plant was built in 1908 and in addition to 83 puddle furnaces and plate mill, included a blast furnace which was dismantled in 1929.

According to the United States Bureau of Standards, the wrought-iron produced by the Byers' new process has highly refined base iron and very uniform distribution of iron-silicate will be for some time to come, wrought-iron pipe, the new mill affords (slag).

Although the principal finished product of the Company is and probably fords facilities for producing plate and bar iron.

PAVING BIDS REJECTED.

The bid for the Oakland Paving Co., the lowest received by the Oakland city council to improve Marguerite street, was thrown out by that body when the bidder failed to sign an affidavit of "non-collusion," which affidavit states that the bidder has no private understandings with other contractors.

STRUCTURAL STEEL WELDING PROGRESS TOLD

A very comprehensive publication covering the progress in structural steel welding has been announced by the Westinghouse Electric and Manufacturing Company. The subjects treated in this 32-page booklet cover the strength of welded joints, design data, test and inspection data, building code, estimating costs, and bridge specifications. There are, in addition, numerous illustrations, a review of the progress made in structural arc welding, and a discussion of future and possible developments in welding. A copy of this publication, S. P. 1879, entitled Arc Welding of Structural Steel may be obtained from any district office of the Company or direct from the Advertising Department, East Pittsburgh, Pa.

PROSPERITY IS JUST AROUND THE CORNER, BANKERS PREDICT

"Good times," measured on the standard of reasonable returns to both labor and capital, will come back in October, American bank directors have predicted by a vote of 2 to 1, according to an analysis of the poll of bankers by Dr. Julius Klein, assistant secretary of the department of commerce.

The remaining third of the bankers polled, says Dr. Klein placed the return of "good times" at January 1. In any case, he declares, when "we do come out of it," the climb will be a healthier, more normal one than that after any previous depression. He believes that it may be two years before the country is back to the 1929 level, which he describes as "hysterical" and as a "speculative" prosperity rather than an "earned" one. "We will arrive at a brass tacks rather than a brass band era," he says.

Scraping Period About Up
"We have had eleven more or less drastic depressions in business in the last 40 years," continues Dr. Klein, "and the period of scraping along the bottom has varied from about eight months in 1917 to 25 months after the bump in 1912. The average duration has been 13 months and the average depression varied only a month or two one way or the other from that figure. In no case, even through the crash of last October and November, have the dark spots on the business 'weather maps' covered areas even remotely comparable with those of previous crashes such as those of 1907 and 1921."

Dr. Klein sees in country-wide statistics, even benefits from the stock market. At the time of the debacle

in 1929, there were but \$40,000 stockholders in six major corporations of the country, while today there are 1,110,000 bona fide owners of the same securities, which, he says, indicates purchase of, rather than speculating in standard securities. Investors, therefore, have been seeking earnings rather than profits.

Improved transportation, and the closer knitting of investors to capital through radio, telephone, airplane and other means of communication, will, upon the upturn, permit it to proceed much faster than in former periods of depression.

Better Business Due

Dr. Klein cites nearly a score of conditions that tend toward better business, once it reaches a sensible level. America's developments of synthetic products is named as one. Stabilization of foreign buying power is another. Europe still buys half of what America sells abroad. Others pertain to products which America is now selling more economically than foreign countries used to sell than here.

Modern devices, always changing, says Klein, had a depressing influence upon the automobile, but the automobile boomed the wearing apparel industry. Piano and organ manufacturers suffered, but radio interests became more valuable. Tobacco revenues were in the depths of depression, the highest known. Travel companies, especially steamship lines, went to new levels.

"As we reach the heights of a better atmosphere," says the assistant secretary, "we will have a far more lasting, substantial physique in the economic body of the nation than in the cream-puff age that has passed."

EAST BAY ARCHITECTS SEEK CIVIC CENTER FOR DEVELOPMENT FOR OAKLAND

A tentative plan for possible civic center development for Oakland in the area between Twelfth and Fourteenth Streets and east from the auditorium to Third Avenue, has been submitted to the Oakland city planning commission by the Society of Architects of Alameda county. The plan also covers the area south of the auditorium.

The plan, with maps and drawings, was accompanied by a letter from Geoffrey Bangs, secretary of the county association.

It presents a proposed civic center development under four headings:

1. Development of a group of public buildings around the auditorium.
2. Development of Peralta Park and the lands south of the auditorium to Fourth Street.
3. Development of the area between Fourth and First Streets for a future union passenger station with the grounds so laid out as to give arriving Oakland visitors the best impression of the city.
4. Development of a yacht harbor

in the estuary south of the auditorium.

The general plan includes the erection of a proposed Exposition building in the civic center and south of that a horticultural building.

In a letter that accompanied the proposed plan, the architects suggested that other cities generally are working along the line of a civic center plan, and that Oakland should fall in line and build with an eye to the future.

No estimate of cost accompanied the plan but it was suggested by the architects that in financing such a civic development, it is customary to "look to future generations."

The architects urged the formation of an agency to continue study along the lines proposed, looking to the development of a comprehensive civic center plan.

The proposal and letter were accepted for the planning commission by Chester R. Hunt, field engineer.

Building News Section

APARTMENTS

Plans Being Revised.
APARTMENTS Cost, \$200,000
BERKELEY, Alameda Co., Cal. Sacramento St. and University Ave. Three-story Class C brick apartments (56 2-, 3 and 4-room apts.)
 Owner—Davis-Pearce Co., Grant and Weber Sts., Stockton.
 Architect and Manager of Construction—Davis-Pearce Co., Grant and Weber Sts., Stockton.
 Architects will be taken subs shortly.

Working Drawings Being Prepared.
APARTMENTS Cost, \$150,000
OAKLAND, Alameda Co., Cal. Crescent Ave. near Santa Clara. Three-story frame and stucco apartments with Class C concrete garage.
 Owner and Builder—R. E. Mayer, 1129 McKinley St., Oakland.
 Architect—Douglas Stone, Great Western Power Bldg., Oakland.
 Bids will be taken in two weeks.

Sub Bids Being Taken.
APARTMENTS Cost, \$75,000
SAN FRANCISCO, Cal., NW Retiro Way and Casa Way. Three-story and basement frame and stucco apts. (15, 3, 4, and 5-room apts.)
 Owner and Builder—C. P. Murphy, 1475 Chestnut St.
 Plans by Lawrence Ebbets, 320 Fulton St.
 Elevators, steel sash, incinerator, etc.

Plans Being Figured.
 Bids Close Sept. 8, 10 A. M.
APARTMENTS Cost, \$12,000
SAN FRANCISCO. Sutter and Jones Streets.
 Alterations to 6th floor of apts.
 Owner—University of California, Berkeley.
 Architect—Eng. Dept. of Owner.

Preparing Working Drawings.
APARTMENTS Cost, \$250,000
SAN MATEO, San Mateo Co., Calif., Location Withheld.
 Six-story and basement class C steel frame, brick and concrete apts. (21 2-, 3-, 4-, 5-, 6-, 7- and 8-room apts.)
 Owner—Name Withheld.
 Architect—Willis Love, 354 Hobart St., Oakland.
 Bids will be called for at a later date.

Sub-Bids Being Taken.
APARTMENTS Cost, \$175,000
SAN FRANCISCO. Green St. near Octavia St.
 Six-story Class A steel frame and concrete apartments (112 rooms).
 Owner and Builder—F. L. Hansen, 282 Seventh St., San Francisco.
 Engineer—John C. Little & Co., 251 Kearny St., San Francisco.

Plans Being Completed.
APARTMENTS Cost, \$40,000
SAN MATEO. San Mateo Co., Cal. Bayview Heights.
 Two-story and basement frame and stucco apartments.
 Owner—E. I. Warren, Los Angeles
 Plans by Carl Schuetz, 1125 The Highway, Redwood City.
 Bids will be taken in one week.

Plans Being Completed.
APARTMENTS Cost, \$10,000
BELOMONT, San Mateo Co., Cal. Two-story and basement frame and stucco apartments.
 Owner—Mrs. Talbot.
 Plans by Carl Schuetz, 1125 The Highway, Redwood City.
 Bids will be taken in about one week.

PASO ROBLES, San Luis Obispo Co., Cal.—Wemberly Hodges, owner of the Cahill Block, recently destroyed by fire will reconstruct the building, the lower floor to be given over to stores and the upper floor for apartments. Approximately \$20,000 will be expended in the work.

Plans Being Prepared.
ALTERATIONS Cost, \$—
OAKLAND, Alameda Co., Cal. Madison and Lake Sts.
 Alterations and additions to one-story frame apts. (add porch, etc.)
 Owner—San Jose Bldg. & Loan Assn., 16th and San Pablo, Oakland.
 Architect—W. E. Schirmer, 700 21st St., Oakland.

Segregated Bids Being Taken.
APARTMENTS Cost, \$125,000
OAKLAND, Alameda Co., Calif. 764 Walker Avenue.
 Eight-story steel frame and brick apartments and garage (six-story apartments and two-story garage; 36 two- and three-room apts.; garage to accommodate 30 automobiles).
 Owner and Builder—Thos. D. Fisher, 2851 23rd Ave., Oakland.
 Engineer—Crooks & Hill, 1448 Webster St., Oakland.

Structure will have brick and terra cotta exterior; mechanical ventilation in baths; steam heating system; hardwood floors throughout.

Bids To Be Taken Within A Few Days
ALTERATIONS Cost, \$—
OAKLAND, Alameda Co., Cal. Madison and Lake Sts.
 Alterations and additions to one-story frame apts. (add porch, etc.)
 Owner—San Jose Bldg. & Loan Assn., 16th and San Pablo, Oakland.
 Architect—W. E. Schirmer, 700 21st St., Oakland.

A Demonstration of the
SKILSAW PORTABLE ELECTRIC HAND SAW
 Will solve your cutting problems.
 (Four Models, 1/2 to 1 h. p.)
ELECTRIC HAMMERS
ELECTRIC DRILLS
GRINDERS, BUFFERS

PETER H. NELSON

Labor Saving Portable Electric Tools.

1248 Mission St. Underhill
 San Francisco 7662

BONDS

MARYSVILLE, Yuba Co., Cal.—Linda School District defaults proposal to issue bonds of \$9000 to finance erection of a 2-classroom addition to the present school.

BERKELEY, Alameda Co., Cal.—City rejects proposal to issue bonds of \$2,690,000 to finance erection of new school and additions to standing school buildings.

ALPAUGH, Tulare Co., Cal.—Alpaugh school district affirmed a \$9000 bond issue August 22, proceeds to be used for school improvements.

BERKELEY, Alameda Co., Cal.—With the proposal to vote bonds three times defeated, steps are being taken by civic leaders to secure funds for new schools and additions to the standing school structures via the direct tax method. An increase in the school tax from 30 to 50 cents, it is estimated, would provide \$450,000 every year for school building purposes—One \$300,000 high school unit and two \$75,000 elementary units.

CHURCHES

JACKSON, Amador Co., Cal.—Until September 7, bids will be received by Mike Radovich, Box 652, Jackson, for painting Saint Sava Church and parish house and erecting galvanized fence with cement foundation. Specifications obtainable from above.

August 30, 1930
 Preparing Working Drawings.
CHURCH Cost, \$20,000
EUREKA, Humboldt Co., Cal.
 One-story redwood church (Colonial type).
 Owner—First Methodist Church.
 Architect—Rollin S. Tuttle, Box C, Los Gatos.
 Plans will be forwarded to owners about Sept. 15th, after which time bids will probably be called for.

Preparing Plans.
CHURCH Cost, \$150,000
LOS ANGELES, Cal. W. Adams St. and 11th Avenue.
 Reinforced concrete class A church (to seat 600).
 Owner—Name Withheld
 Architects—Thos. P. Barber and Paul Kingsbury, Union Insurance Bldg., Los Angeles.

Plans Being Prepared.
CHURCH Cost, \$75,000
OAKLAND, Alameda Co., Cal. Emerson and Excelsior Aves.
 Reinforced concrete church.
 Owner—Roman Catholic Archbishop of San Francisco, 1150 Franklin St., San Francisco.
 Architect—W. E. Schirmer, 700 21st St., Oakland.

FACTORIES AND WAREHOUSES

Plans Being Figured—Bids Close Sept. 17, 2 P. M.
STATION Cost, \$—
UKIAH, Mendocino Co., Cal. Three and one-half miles north of Ukiah Highway maintenance station—prising superintendent's cottage, truck shed, office and store house.

loading platform, gasoline and oil house, septic tank, single wood shed, station sign and yard trellis
Owner—State of California (Highway Commission).

Architect—State Department of Architecture, State Office Bldg., Sacramento.

Bids are being received by the District Engineer at San Francisco. Deposit of \$25 required for plans, obtainable from John H. Skeggs, District Engineer, 211 State Office Bldg., San Francisco.

See call for bids under official proposal section in this issue.

Bids Opened.

HANGAR Cost, _____
STOCKTON, San Joaquin Co., Calif.,
Municipal Airport.

Frame and galvanized hangar (4 plane capacity; 50x60-ft.)

Owner—City of Stockton.
Plans by Lyle Payton, city engineer, City Hall, Stockton.

Following is a complete list of bids:

H. E. Vickroy, 1122 N Commercial St., Stockton.....	\$3,192
George Roek, Stockton.....	3,195
T. E. Williamson, Stockton.....	3,223
L. Tothaire, Stockton.....	3,247
Viscon & Salfeld, Stockton.....	3,259
C. H. Dodd, Stockton.....	3,365
Robert Beyrie, Stockton.....	3,471
John Hackman, Stockton.....	3,500
Frank Guyon, Stockton.....	3,590
D. E. Metzger, Stockton.....	3,650
J. M. Hildebrandt, Stockton.....	3,798
Ecker & Stegmaier, Stockton.....	3,940

Bids held under advisement until Sept. 8th.

SAN FRANCISCO.—J. Piasecki, 345 Haight St., at \$2346 submitted low bid to Board of Public Works to erect pump house to house Sunset Pumps. Complete list of bids follows:

J. Piasecki.....	\$2,346
F. J. Reilly.....	2,591
W. F. and C. W. Mattock.....	2,782
Jacks & Irvine.....	2,864
Clancy Brothers.....	2,976

BANKS, STORES & OFFICES

General Contract Plans Being Re-figured—Bids Close Sept. 30 2 P. M.

OFFICES Cost, \$—
LOS ANGELES, Cal. Civic Center. Property bounded by First, Spring Broadway and Court Sts.
Twelve-story and basement class A State office building.
Owner—State of California.
Architect—John C. Austin (of the firm of John C. Austin and Frederick M. Ashley) Chamber of Commerce Bldg., Los Angeles.

Bids are wanted for a general contract, with three alternate propositions. Bids, previously opened for granite, structural steel, electric work elevators, plumbing, heating and ventilating work have been taken under further advisement.

Following is a complete list of the low bids received under the bid opening of August 6:

General Work—Weymouth Crowell Co., Los Angeles, \$639,000.
Granite—McGillivray-Raymond Co., Los Angeles, \$199,385.
Structural Steel—Consolidated Steel Corp., Los Angeles, \$128,775.
Electrical Work—H. H. Walker Elec. Co., Los Angeles, \$43,894.
Elevators—Consolidated Steel Corp., Los Angeles, \$47,900.
Plumbing—Pacific Pipe & Supply Co., Los Angeles, \$47,673.
Heating—Lohman Bros., Los Angeles, \$33,383.
Ventilating—J. Herman Co., Los Angeles, \$16,850.

See call for bids under official proposal section in this issue.

Completing Plans.
STONE BLDG. Cost, \$50,000
SAN JOSE, Santa Clara Co., Cal., 6th and St. John Sts.
One and two-story frame and cast stone veneer physicians' building (cover area of 7500 sq. ft.)
Owner—Group of Local Physicians.
Architect—Herman Krause, P O Box 783, San Jose.
Bids will be taken in 2 weeks.

Sub Contracts Awarded.
STORE Cost, \$150,000
OAKLAND, Alameda Co., Cal. 20th St. and Broadway.
Three-story class A store.
Owner—L. Maguin & Co., Grant Ave. and Geary St., San Francisco.
Architect—Weeks and Day, Financial Center Bldg., San Francisco.
Contractor—Chas. Heyer, Mills Bldg., San Francisco.

Brick Work—Mealey & Collins, 666 Mission St., San Francisco.
Terra Cotta—N. Clark & Son, 116 Natoma St., San Francisco.

Sheet Metal—Morrison & Co., 74 DuBoce Ave., San Francisco.
Skylights—Forderer Cornice Works, 269 Potrero Ave., San Francisco.

Waterproofing—Horn Products Co., 354 Hobart St., Oakland.

Tile Work—Higley Tile Co., 3012 Harrison St., Oakland.
Marble and Steel Sash—Vermont Marble Co., 244 Brannan St., San Francisco.

Orn. Iron—Michel & Pfeiffer Iron Works, Harrison and 10th St., San Francisco.

Toilet Partitions—Price Bldg. Specialties Co., 633 Howard St., San Francisco.

Elevators—Spencer Elevators Co., 166 7th St., San Francisco.

Plumbing and Heating—Fearey & Moll, 1075 40th St., Oakland.

Awings—J. L. Stewart, 33 Front St., San Francisco.

Painting—D. Zelinsky, 165 Grove St., San Francisco.
As prev. reported:

Piles—MacArthur Concrete Pile Co., 58 Sutter St., San Francisco.

Reinforcing Steel—Gunn & Carle, Ltd., 444 Market St., San Francisco.

Excavation—J. Catucci, 1212 18th Ave. Oakland.

Sub Contracts Awarded.
BLDG. Cont. Price, \$24,450
EUREKA, Humboldt Co., Cal. Fifth St. bet. F and G Sts.
Two-story brick building.
Owner—W. P. Fuller & Co., 301 Mission St., San Francisco.
Architect—Franklin T. Georgeson, 6th and G St., Eureka.
Contractor—Fred J. Maurer & Son, Eureka.

Elevators—Atlas Elevator Co., 34 Harriet St., San Francisco.

Lumber—McKay & Co., Eureka.
Plumbing & Heating—Flook & Son., Eureka.

Electric Work—Home Electric Co., Eureka.

Sheet Metal—John Ryan, Eureka.
Mill Work—Little River Redwood Co., and Cottrells Molding Mill, Eureka.

Rein. Steel—Concrete Engineering Co., 1280 Indiana St., S. F.
Painting—Ole Olsen, Eureka.

Plans Being Prepared.
STORE Cost, \$—
MT. EDEN, Santa Clara Co., Cal. Remodel Present Store.
Owner—Mr. Dennis.
Architect—Wolfe & Higgins, Realty Bldg., San Jose.
Bids will be taken in about one week.

Contract Awarded.
ALTERATIONS Cost, \$3233
SANTA CLARA, Santa Clara Co., Cal. Franklin Street.
Alterations to present store.
Owner—Belle Machefert, 252 S 16th St., San Jose.

Architect—Wolfe and Higgins, Realty Bldg., San Jose.

Contractor—Frank Neves, 391 Harrison St., San Jose.

PASO ROBLES, San Luis Obispo Co., Cal.—William Lane, Paso Robles, awarded contract by R. C. Heaton to erect store building at Thirteenth and

Park streets for lease to the J. C. Penny Co., chain store operators

Plans Being Completed.
ALTERATIONS Cost, \$100,000
SAN FRANCISCO. St. Francis Hotel (Howell, Geary and Post Sts.)
Alter mural room for restaurant and sweet shop.
Owner—St. Francis Hotel
Architect—W. B. Faville, Crocker 1st National Bank Bldg.
Lessee—Ulgm Whistle Corp.
Bids will be taken in two weeks

Plans To Be Prepared.
BANK Cost approx \$2,000
CASTROVILLE, Monterey Co., Cal. One-story brick bank.
Owner—Monterey County Trust and Savings Bank, Salinas.
Architect—H. H. Winner Co., 530 Market St., San Francisco.

Contract Awarded—Grading Completed
ANNEX Cost, \$—
DUNSMUIR, Siskiyou Co., Cal. Florence Avenue.
Two-story concrete postoffice annex (25x25-ft.)

Owner—William R. Lee, Dunsmuir.
Private Plans.
Contractor—M. E. Bordwell, Dunsmuir.

Contract Awarded.
STUDIO Cost, \$6,500
SAN FRANCISCO. S Francisco East Mason St.
One-story, mezzanine floor and basement frame studio.
Owner—P. O. Tognelli, 3056 Gough St.
Architect—None.
Contractor—C. Lindberg, 1 Naylor St.

Plans Being Prepared.
ALTERATIONS Cost, \$10,000
GILROY, Santa Clara Co., Cal. Alterations and additions to bank.
Owner—American Trust Co., 464 California St., San Francisco.
Architect—A. H. Herman, 464 California St., San Francisco.

Preliminary Plans Being Prepared.
OFFICES Cost, \$60,000
SAN FRANCISCO. Sansome St. bet Pine and California Sts.
Fifteen-story class A office bldg.
Owner—Norwich Un. Fire Insurance Co., San Francisco.
Architect—Weeks and Day, Financial Center Bldg.

Proposed project is in a very preliminary stage.

Plans Being Figured.
NEWSPAPER PLANT Cost, \$225,000
HOLLYWOOD, Los Angeles Co., Cal. 1541-49 Wilcox Ave.
Two-story and basement reinforced concrete newspaper plant (141x143 feet).

Owner—Hollywood News Pub Co.
Architect—F. D. Rutherford, 11115 Bldg., Santa Monica.

Contract Awarded.
STORE Cost, \$12,000
OAKLAND, Alameda Co., Cal. Cleveland and Althl Streets
One story and basement brick store.
Owner—Robert Gage.
Architect—E. L. Snyder, 2101 Shattuck, Berkeley.

Contractor—W. E. Lynn, 354 Hobart St., Oakland.

Plans Being Figured—Bids Close Sept. 10, 1930
STORE Cost \$15,000
SAN MATEO, San Mateo Co., Cal. Third Ave.
One-story and basement reinforced concrete store (40x85).
Owner—Martin Stelling, Jr., 155 Montgomery St., San Francisco.
Architect—Berta Winter & Maury, 210 Post St., San Francisco

Plans Being Completed.
STORE Cost, \$20,000
BERKELEY, Alameda Co., Cal., Shattuck Avenue.
Owner—Name Withheld.
Architect—E. L. Snyder, 2101 Shattuck Ave., Berkeley.
Bids will be taken in one week.

Plans Being Completed.
DENTAL BLDG Cost, \$175,000
OAKLAND, Alameda Co., Cal. 34th St. and Broadway.
Three-story reinforced steel frame and brick Medico-Dental Building.
Owner—Withheld.
Architect—Fred H. Reimers, Franklin Bldg., Oakland.
Bids will be called for shortly.

Sub-Contracts Awarded.
ALTERATIONS Cost, \$—
ANTIOCH, Contra Costa Co., Cal. No. 601 Second Street.
Alterations and additions to present two-story reinforced concrete building.
Owner—First National Bank, Antioch.

Architect—Arthur Johnson, State Hotel, 18 Turk St., San Francisco.
Engineer—W. W. Wethered, State Hotel, 18 Turk St., San Francisco.
Manager of Construction—G. H. Field, Antioch.

Plumbing—W. H. Beasley, Antioch.
Electric Work—Harry H. Hoxie, Antioch.
Tile—B. J. Fowler, Antioch.
Lumber and Mill Work—Antioch Lumber Co., Antioch.
Excavating—Bullach & Glass, Antioch.

THEATRES

Preparing Working Drawings.
OPERA HOUSE Cost, \$2,500,000
SAN FRANCISCO. Block bounded by Van Ness Ave., Franklin, Grove and Fulton Sts.
Six-story Class A opera house, seating capacity 4000; standing room 500.
Owner—City and County of San Francisco (S. F. War Memorial).
Architect—G. A. Lansburgh, 140 Montgomery St. and Arthur Brown, 251 Kearny St., San Francisco.
Bids will probably not be called for until January, 1931.

Preparing Working Drawings.
LEGION BLDG. Cost, \$2,500,000
SAN FRANCISCO. Civic Center.
Four-story and basement concrete Class A Legion Building.
Owner—City and County of San Francisco (S. F. War Memorial).
Architect—G. A. Lansburgh, 140 Montgomery St. and Arthur Brown, 251 Kearny St., San Francisco.
A. Wagstaff, 451 Montgomery St., is in charge of the memorial drafting rooms.
Bids will probably not be called for until January, 1931.

Sub-Bids Being Taken.
THEATRE Cost, \$300,000
HUNTINGTON PARK, Los Angeles Co., Cal. Zoe and Saturn Aves.
Class A theatre.
Owner—Fox West Coast Theatres, Inc.
Architect—Paul R. Williams, 3339 Wilshire Blvd., Los Angeles.
Contractor—O'Neal & Sons, 3339 Wilshire Blvd., Los Angeles.

Contract Awarded.
THEATRE Cost, \$150,000
LOS ANGELES, Cal. Livonia and Pico Blvd.
Two-story and basement reinforced concrete theatre (to seat 1500).
Owner—Hollywood West Coast Theatres, Inc.

Architect—Boller Bros., Douglas Bldg., Los Angeles.
Contractor—Henry I. Beller Constr. Co., 5613 Hollywood Blvd., Los Angeles.

Plans Being Figured—Bids Close Sept. 12th, 10 A. M.
THEATRE Cost \$250,000
SAN FRANCISCO. Ocean Avenue bet. Fairfield and Lakewood Aves.
Class A steel frame and reinforced concrete theatre and (6-8) stores; theatre seating 1800.
Owner—Samuel Levin.
Architect—Miller & Phueger, 580 Market St.

Bids are being taken for a general contract with separate bids on mechanical work and electrical work.
Structure will have a seating capacity of 1800 and contain six or eight stores. It will have a frontage of 182 feet on Ocean Ave.

MISCELLANEOUS CONSTRUCTION

Contract Awarded.
BUNKERS Cost, \$12,000
SAN MATEO, San Mateo Co., Cal. Woodside Way.
Reinforced concrete sand and gravel bunkers.
Owner—H. E. Casey Co., San Mateo.
Architect—None.
Contractor—A. M. Schulte, 120 Bancroft St., Burlingame.

SAN FRANCISCO—City will vote November 4 on the proposal to issue bonds of \$4,000,000 to finance developments at the Mills Field Municipal Airport, portions of which will finance the purchase of land in connection with the field. Expenditure segregations, as compiled by M. M. O'Shaughnessy, city engineer, follows:

For purchase of 1002 acres of land from the Mills estate, in addition to the 110 acres now owned by the city, \$945,000.

For purchase of 1080 acres of tidelands, lying to the east of the airport, \$108,000.

For construction of a rip-rap dyke, \$440,000.
For 13,510,000 cubic yards of fill, \$1,351,000.

For runways, \$308,000.
For dressing, grading and seeding the field, \$270,000.

For 338,000 square feet of concrete for aprons and strips, \$101,400.
For roads and parking spaces, \$56,000.

For additional hangars, \$90,000; administration building, \$100,000; pumps and drainage, \$106,600, and night lighting, \$125,000.

The plans providing for essential lighting developments include four major runways, a harbor for amphibian and seaplanes, a yacht harbor and adequate channel. Some 500 acres west of the highway will be reserved for aviation industries.

Plans Being Completed.
MAUSOLEUM Cost, \$150,000
LONG BEACH, Los Angeles Co., Cal. Cherry Road.
Two and three-story reinforced concrete mausoleum (1000 crypts) (275 50 feet).
Owner—Sunnyside Mausoleum Co.
Architect—Clarence L. Jay, 871 E. Washington St., Pasadena.

LIVERMORE, Alameda Co., Cal.—Until September 6, 11 A. M., bids will be received by Dr. C. W. Mack, Clerk, Livermore Union High School District, to haul earth from new plant of the Kaiser Paving Company near Pleasanton to the high school grounds. Specifications obtainable from clerk.

REDWOOD CITY, San Mateo Co., Cal.—Until September 15, 3 P. M., bids will be received by B. E. Myers, City Clerk, to construct reinforced concrete retaining wall on Stafford St. at Cordilleras Clerk. Certified check 10% payable to city required with bid. Plans obtainable from C. L. Dinmitt, city engineer.

Plans To Be Prepared.
BUILDING Cost, \$20,000
SAN RAFAEL, Marin Co., Cal.
Two-story brick humane society bldg. Owner—Humane Society.
Architect—N. W. Sexton, de Young Bldg., San Francisco.
Plans will be ready for bids in 30 days.

Contract Awarded.
SWIMMING POOL Cost approx. \$4000
FAIRFAX, Marin Co., Cal.
Reinforced concrete swimming pool. Owner—Meadow Club of Tamalpais.
Engineer—Maurice Couchot, 525 Market St., San Francisco.
Contractor—Industrial Const. Co., 815 Bryant St., San Francisco.
Filtering System—International Filter Co., Monadnock Bldg., San Francisco.

MISCELLANEOUS SUPPLIES AND MATERIALS

OAKLAND, Cal.—Until September 16, 4 p. m., bids will be received by John W. Edgemond, secretary, Board of Education, 104 Administration Bldg., to furnish and deliver fuel oil. Specifications obtainable from Assistant Business Manager of the board.

A state-wide educational campaign on behalf of Constitutional Amendment Number Six has just been initiated with the support of leaders in Protestant, Catholic and Jewish organizations, the California State Federation of Labor, women's clubs and hospital officials. This amendment, to be voted upon November 4th, provides tax exemption for the non-profit hospitals in this State. The plan of education is being conducted by the California Committee for Tax Exemption of the Non-Profit Hospitals.

"Forty-five States in the Union already provide tax relief for the non-profit hospitals," states G. W. Curtis of Santa Barbara, general chairman of the committee. "Tax exemption has been granted to the non-profit hospitals in these forty-five states on the grounds that these hospitals share the public burden and are not commercial in character," Mr. Curtis continues.

Free service of over \$2,500,000 was contributed by sixty-four non-profit hospitals in California during 1929, according to Mr. Curtis. A non-profit hospital is distinguished from other hospitals in that all earnings from the institution are devoted to the conduct of the hospital and no officers, trustees, or directors receive for any dividends, fees or payments for their services. It was explained. Of these 64 hospitals reporting, 12 are under Protestant auspices, 17 under Catholic auspices, 3 Jews, 9 labor and fraternal and 23 community, and therefore non-sectarian.

Engineering News Section

BRIDGES

SAN FRANCISCO—Directors of the Golden Gate Bridge & Highway District have voted to place a bond issue of \$35,000,000 before the voters at the November election to finance construction of the proposed bridge over the Golden Gate Strait.

REDWOOD CITY, San Mateo Co., Cal.—Until September 15, 3 P. M., bids will be received by B. E. Myers, City Clerk, to construct reinforced concrete retaining wall on Stafford St. at Cordilleras Clerk. Certificate check 10% payable to city required with bid. Plans obtainable from C. L. Dimmitt, city engineer.

LOS ANGELES, Cal.—San Francisco Bridge Co., 14 Montgomery St., San Francisco, at \$71,900 submitted low bid to U. S. Engineer Office, Los Angeles, using a 20-ton derrick plant, to repair revetment at Reservation Point. Using clamshell dredges, the company bid \$73,000. Merritt, Chapman and Scott, Corp., San Pedro, only other bidder at \$81,300.

SACRAMENTO, Cal.—City Engineer Fred J. Klaus has completed tentative plans and estimates for the proposed subway at Fifty-seventh and H streets. The total cost is estimated at \$98,470 of which the Southern Pacific Railroad will be asked to pay one-half. The city has not yet decided on the method of financing its portion of the cost. Two methods are suggested, one a bond issue and the other an arrangement for progressive payments financed from taxes over a period of several years. There is \$10,000 available for the project in the current year's budget. The plans provide for a clear-span structure of the type in use at Sixteenth and B Sts., to have 4-lanes of traffic. It will be constructed on 106 concrete piles, reinforced with steel and waterproofed.

OAKLAND, Cal.—A conference will be held shortly between members of the City Council, the county supervisors and the City Port Commission, to consider alternate plans prepared by County Surveyor Geo. A. Posey for replacement of the Park Street bridge. Plans for two types have been prepared, one for a lift type and the other for a bascule type bridge. Replacement of the bridge is necessary, as the War Department announces there will be no further dredging of the estuary until bridges are provided for larger ships.

STOCKTON, San Joaquin Co., Cal.—Hearing by the State Railroad Commission on Stockton's application for permission to construct a subway on Charter Way under the Southern Pacific and Western Pacific railroads has been postponed from September 4 to December 9. The project will cost \$200,000, of which the two railroads will pay one-half and the city the remaining half.

MARYSVILLE, Yuba Co., Cal.—Until September 11, 10 a. m., bids will be received by W. M. Streif, county clerk, to construct:
(1) concrete bridge on Bit House Road at Mrs. Blake's Farm;

(2) concrete culvert across ditch at Higgins and Lubman's;
(3) two concrete bridges on the Dobbins road near Scott's place.

Certified check 10 per cent payable to county clerk required with bid. Specifications obtainable from clerk on payment of \$1.

LOS ANGELES COUNTY, Cal.—Following bids received September 3 by State Highway Commission to construct a reinforced concrete girder bridge across Castaic Creek, about 1/2 mile north of Castaic Junction, composed of seven 35-ft. spans on concrete bents and concrete abutments with pile foundations:
Carpenter Bros., Inc., Beverly Hills \$31,149
Oberg Bros., Los Angeles 32,166
R. H. Travers, Los Angeles 32,847
A. R. Bodenhamer, Carpinteria 34,841
George Ulrich Construction Co., Modesto 35,695
Gist & Bell, Arcadia 35,890
M. H. Slocumbe, Pasadena 36,219
R. R. Bishop, Long Beach 37,700
Beyert & Dunn, Los Angeles 38,643
Bids held under advisement.

SANTA ROSA, Sonoma Co., Calif.—Walter L. Proctor, Santa Rosa, awarded contract by county supervisors to construct two reinforced concrete culverts on the Paula road in Second Supervisorial District. Project involves: 115 cu. yds. class A concrete; 12,500 lbs. reinforcing steel; 86 cu. yds. excavation.

SANTA ROSA, Sonoma Co., Calif.—Walter L. Proctor, Santa Rosa, awarded contract by county supervisors to construct three timber trestles over Santa Rosa Creek at the Ballou ranch in the Third Supervisorial District. Project involves: 4,000 cu. yds. excavation; 2,680 ft. redwood piling; 44.6 M. B. M. lumber.

SAN JOSE, Santa Clara Co., Cal.—Thermotte Construction Co., San Jose, at \$4198 awarded contract by county supervisors to widen concrete bridges on Quinto road at Austin Corners and on Fruitvale ave., over Wildcat Creek and a concrete wall at Ralsch's place on the Quinto road, all in Supervisorial District No. 5. Complete list of bids follows:
Thermotte Construction Co. \$4198
C. C. Gildersleeve 4244
Collins and Martin 4274
Surveyor's estimate \$4200

DREDGING, HARBOR WORKS & EXCAVATIONS

SANTA BARBARA, Cal.—City council reconsiders action on bids to construct East River seawall and will re-advertise for bids on the work. Merritt, Chapman and Scott Corp., San Pedro, only bidders at \$118,000. City proposes to keep cost within the \$200,000 available for construction.

CORTE MADERA, Marin Co., Cal.—U. S. Engineer Office, Customhouse, San Francisco, is making survey of Corte Madera creek, which runs from the bay to the bridge at Kentfield, under the River and Harbor Act. The survey is to be made to determine the amount of tonnage that could be

shipped in and out of the channel provided it was dredged out and made navigable.

STOCKTON, San Joaquin Co., Cal.—Fred C. Franks Contracting Co., 260 California St., San Francisco, submitted low bid to the U. S. Engineer at Sacramento, 9.8c cu. yd. for part 1, clamshell dredging for constructing levees and embankments along the San Joaquin River in connection with the San Joaquin and Stockton Channel Project. The project involves approximately 2,617,100 cu. yds. clamshell dredging. The bid was 9.8c in borrow pit or 7.4c in bucket. Part 111—7.2c yd. in borrow pit or 7.4c in bucket.

California Delta Farms, Stockton, submitted low bid on part 11, at 6.6c yd. in borrow pit or in bucket.
E. T. Fisher, Burlingame, apparently submitted low bid on dragline excavating, (approx. 863,600 yds) at 7.3c yd. in borrow pit or bucket for parts A and B. The bid on part D was 15c.

MEASURED IN BORROW PITS MEASURED IN BORROW PITS

- (1) Part 1—1,827,000 cu. yds. dredging;
 - (2) Part 2—325,400 cu. yds. dredging;
 - (3) Part 3—464,000 cu. yds. dredging.
- MEASURED BY THE BUCKET**
(4) Part 1—1,827,000 cu. yds. dredging;
- (5) Part 2—325,400 cu. yds. dredging;
- (6) Part 3—464,000 cu. yds. dredging.

Franks Contracting Co.—(1) 9.8c, (2) 7.2c, 6.8c.
Calif. Delta Farms, Belding Bldg., Stockton (low on 2)—(2) 6.6c, (5) 6.6c.
Olympic Dredging Co., San Francisco—(1) 4.7c, (6) 6.8c.

Engineer's estimate—(1) 11.7c, (2) 9.3c, (3) 9.3c, (4) 15.1c, (5) 11.9c, (6) 11.9c.
Part 1—From Mormon Channel to Turners Cut and cut-off across McDonald Tract; part 2, from Turner Cut to west side of Spud Island, and part 3, from McDonald Tract to near Camp 8, Venice Island.

DRAGLINE EXCAVATION

(1) If awarded only part one of the work. Bids were taken on the following items:

- (A) Per cu. yd. measured in borrow pits. See A;
- (B) Per cu. yd. measured in buckets. See B.

John Phillips, San Francisco—(A) 8c, (B) 8c.

Paris Bros., Berkeley—(A) 13c, (B) 13c.

Delta Dredging Co.—(A) 13c, (B) 16c.

Schwitzer Bros., L. A.—(A) 14.8c, (B) 14.8c.

Engineer's estimate—(A) 11.7c, (B) 15.1c.

(2) If awarded only part two of the work. Bids were taken on the following items:

- (A) Per cu. yd. measured in borrow pits. See B.
- (B) Per cu. yd. measured in buckets. See B.

John Phillips, San Francisco—(A) 12c, (B) 12c.

Paris Bros., Berkeley—(A) 13c, (B) 13c.

Delta Dredging Co.—(A) 12c, (B) 15c.

Schweltzer Bros., L. A.—(A) 15.1c, (B) 15.1c.
 Engineer's estimate—(A) 12.6c, (B) 16.4c.

(3) If awarded only part three of the work. Bids were taken on the following items:

(A) Per cu. yd. measured in borrow pits, Sec. C;

(B) Per cu. yd. measured in borrow pits, Sec. D;

(C) Per cu. yd. measured in buckets, Sec. C;

(D) Per cu. yd. measured in buckets, Sec. D.

Parls Bros., 2415 Oregon St., Berkeley (low)—(A) 13c, (B) 13c, (C) 13c, (D) 13c.

Delta Dredging Co.—(A) 12c, (B) 15c, (C) 12c, (D) 15c.

Engineer's estimate—(A) 13.1c, (B) 17.1c, (C) 13.6c, (D) 17.7c.

(4) If awarded only parts one and two of the work. Bids were taken on the following items:

(A) Per cu. yd. measured in borrow pits, Sec. A;

(B) Per cu. yd. measured in borrow pits, Sec. B;

(C) Per cu. yd. measured in buckets, Sec. A;

(D) Per cu. yd. measured in buckets, Sec. B.

E. T. Fisher, 2520 Hale Dr., Burlingame (low)—(A) 7.3c, (B) 7.3c, (C) 7.3c, (D) 7.3c.

John Phillips, San Francisco—(A) 8c, (B) 12c, (C) 8c, (D) 12c.

Parls Bros., Berkeley—(A) 13c, (B) 13c, (C) 13c, (D) 13c.

Delta Dredg. Co.—(A) 12c, (B) 11c, (C) 15c, (D) 13.75c.

Schweltzer Bros., L. A.—(A) 14.8c, (B) 15.1c, (C) 14.8c, (D) 15.1c.

(5) If awarded only parts two and three of the work. Bids were taken on the following items:

(A) Per cu. yd. measured in borrow pits, Sec. B;

(B) Per cu. yd. measured in borrow pits, Sec. D;

(C) Per cu. yd. measured in borrow pits, Sec. C;

(D) Per cu. yd. measured in buckets, Sec. B;

(E) Per cu. yd. measured in buckets, Sec. C;

(F) Per cu. yd. measured in buckets, Sec. D.

E. T. Fisher, 2520 Hale Dr., Burlingame, (A) \$.073, (C) 15c, (D) \$.073, (F) 15c.

John Phillips, San Francisco, (A) 12c, (B) 35c, (C) 35c, (D) 12c, (E) 35c, (F) 35c.

Parls Bros., Berkeley, (A) 13c, (B) 13c, (C) 13c, (D) 13c, (E) 13c, (F) 13c.

Delta Dredging Co., (A) 11c, (B) 11c, (C) 11c, (D) \$.1375, (E) \$.1375, (F) \$.1375.

(6) If awarded only parts one and three of the work. Bids were taken on the following items:

(A) Per cu. yd. measured in borrow pits, Sec. A;

(B) Per cu. yd. measured in borrow pits, Sec. A;

(C) Per cu. yd. measured in borrow pits, Sec. D;

(D) Per cu. yd. measured in buckets, Sec. A;

(E) Per cu. yd. measured in buckets, Sec. A;

(F) Per cu. yd. measured in buckets, Sec. D.

E. T. Fisher, 2520 Hale Dr., Burlingame, (A) \$.073, (C) 15c, (D) \$.073, (F) 15c.

John Phillips, San Francisco, (A) 8c, (B) 35c, (C) 35c, (D) 8c, (E) 35c, (F) 35c.

Parls Bros., Berkeley, (A) 13c, (B) 13c, (C) 13c, (D) 13c, (E) 13c, (F) 13c.

Delta Dredging Co., (A) \$.119, (B) \$.104, (C) 12c, (D) 16c, (E) 15c, (F) 15c.

(7) If awarded entire project, parts one, two and three of the work. Bids were taken on:

(A) Per cu. yd. measured in borrow pits, Sec. A;

(B) Per cu. yd. measured in borrow pits, Sec. B;

(C) Per cu. yd. measured in borrow pits, Sec. C;

(D) Per cu. yd. measured in borrow pits, Sec. D;

(E) Per cu. yd. measured in buckets, Sec. A;

(F) Per cu. yd. measured in buckets, Sec. B;

(G) Per cu. yd. measured in buckets, Sec. C;

(H) Per cu. yd. measured in buckets, Sec. D.

E. T. Fisher, Berkeley, (A) \$.073, (B) \$.073, (C) \$.073, (D) \$.073, (E) \$.073, (F) \$.073, (H) \$.073.

John Phillips, S. F., (A) 8c, (B) 12c, (C) 35c, (D) 8c, (E) 12c, (F) 35c, (H) 35c.

Lewis Constr. Co., L. A., (A) 8c, (B) 15c, (C) 12c, (D) 20c, (E) 8c, (F) 15c, (G) 12c, (H) 20c.

Parls Bros., Berkeley, (A) \$.1249, (B) \$.1249, (C) \$.1249, (D) \$.1249, (E) \$.1249, (F) \$.1249, (G) \$.1249, (H) \$.1249.

Delta Dredging Co., (A) \$.119, (B) \$.104, (C) \$.104, (D) \$.104, (E) 15c, (F) 13c, (G) 13c, (H) 13c.

Work involves:

Part One (Sec. A), 478,800 cu. yd.

Part Two (Sec. B), 268,700 cu. yd.

Part Three (Sec. C), 50,000 cu. yd.

Part Three (Sec. D), 66,100 cu. yd.

TURLOCK, Stanislaus Co., Calif.—

Carlson Bros., Turlock, at \$.0585 sq. ft. awarded contract by Turlock Irrigation District for 467,625 sq. ft. 2-inch concrete canal lining in various sections of the district under schedules Nos. 5, 6, 7, 8, 9 and 11.

Ed. Erickson, Turlock, at \$.059 sq. ft. awarded contract for 73,400 sq. ft. under schedule No. 1 and at \$.06 sq. ft. for 140,515 sq. ft. under schedule Nos. 3 and 4 and at \$.07 sq. ft. for 37,760 sq. ft. under schedule No. 12.

IRRIGATION PROJECTS

LINDEN, San Joaquin Co., Cal.—

Linden Irrigation District will call election at once to vote bonds of \$105,000 to finance construction of irrigation works. The district will divert water from the Calaveras river.

STREET LIGHTING SYSTEMS

OAKLAND, Cal.—Until September 11, 12 noon, bids will be received by Frank C. Merritt, city clerk, to install ornamental street lighting system in East 12th St., bet. Lake Shore Ave. and 13th Ave., involving 77 ornamental duplex standards together with underground system. 1911 Act. Certified check 10% payable to city required with bid. Plans on file in office of city clerk. Walter N. Frickstad, city engineer.

OAKLAND, Cal.—Butte Electric and Manufacturing Co., 956 Folsom St., San Francisco, at \$2200 awarded contract by city council to install lighting system in 38th Ave., bet. Allendale Ave. and Liese Ave., involving 21 single-light standards together with underground system.

REDWOOD CITY, San Mateo Co., Cal.—City council declares intention (M-14) to install ornamental street lighting system, 17 2-light standards, in Broadway between El Camino Real and Brewster ave., etc., together with underground system. Union Metal Design No. 8092. 1911 Act, Bond Act 1915. Hearing September 15. B. E. Myers, city clerk. C. L. Dimmitt, city engineer.

MACHINERY AND EQUIPMENT

OAKLAND, Cal.—Following bids taken under advisement by East Bay Municipal District to furnish portable electric arc welder and equipment:

Jenison Machinery Co., San Francisco; for Wilson Welder, P-20 Continental Red Steel motor, \$1004.00.

Schramm, Inc., San Francisco, for Lincoln Welder, 300 Amp. Buda 4"x 5 1/4" Engine, \$1319.75 or \$1419.75.

Hobart Bros. Co., by Chas. S. Jorges, Berkeley, for Hobart Constant Arc Welder, Waukasha Engine, \$1073.50 or \$1052.03.

Edward R. Bacon Co., San Francisco for Schramm Portable Engine Driven Welder, \$1319.75.

H. B. Squires Co., San Francisco, for Electric Arc Cutting and Welding Co. Welder, Continental Motor, \$1025.00 or \$1075.00.

Fusion Welding Corp., San Francisco Fusion Welder, Fuda or Continental motor, \$1297.90, \$1271.94, \$1537.90 or \$1507.14.

Victor Welding Equip. Co., S. F., Lincoln Welder, \$1636.30, \$1603.57, \$12-24.30 or \$1199.81.

Brown Bros. Welding Co., S. F., General Electric Welder, Buda Hivelo Engine \$1160.00.

Edgar R. Chinnberg, San Francisco, U. S. L. Electric Arc Welder, 225 Amp. Hercules Engine, \$1287.45 or \$1261.70.

Lincoln Elect. Co., San Francisco, Lincoln Stable Arc Welder, \$1623.65 or \$1209.65.

ROSEDALE, Kern Co., Cal.—Until September 12, 7:30 P. M., bids will be received by Reginald T. Waters, Clerk, Rosedale School District to furnish one school bus complete. Specifications obtainable from clerk.

MARTINEZ, Contra Costa Co., Cal.—J. P. DeRose, Martinez, at \$995 awarded contract by city council to furnish Chevrolet motor truck for street cleaning department. Durant Motor Co., Oakland, only other bidder at \$1300.

PASADENA, Los Angeles Co., Cal.—Whiting Corp. submitted low bid to the city directors at \$25,720 to furnish one electrically operated crane with one 100-ton hoist, one 15-ton hoist, and one 2-ton hoist, delivered, unloaded, completely erected and tested to the satisfaction of the city.

FIRE ALARM SYSTEMS

WATSONVILLE, Santa Cruz Co., Cal.—Until September 10, 7:30 P. M., bids will be received by M. M. Swisher, city clerk, to furnish 40 ft. of 2 1/2-inch fire hose, coupled in 50 ft. sections with bronze couplings.

See call for bids under official proposal section in this issue.

HUNTINGTON PARK, Cal.—Until September 15, 8 p. m., bids will be received by W. P. Mahood, city clerk, to furnish one city service ladder truck. Certified check or bond 10 per cent required with bid. Specifications on file in office of clerk.

RESERVOIRS AND DAMS

IRVINE, Orange Co., Cal.—Irvine, owner of the Irvine Ranch, has announced that the Irvine Co. will start work this fall on construction of two dams in accordance with plans prepared by C. Roy Browning, consulting engineer. The larger of the two dams will be located within 1000 ft. of tide water at the head of upper Newport Bay. It will be 35.5 ft. high and will

provide a storage lake 2 miles in length, impounding 12,000 acre feet of water below the spillway crest. Estimated cost, \$115,000. This structure will be known as the San Juan Rancho conservation dam. The second dam will be located in Peters Canyon near the old Santiago Golf Club. It will impound 1000 acre feet of water. It will cost \$40,000. Pumping plants and conduits to be built in connection with the dams will cost about \$140,000. The total crest length of the larger dam will be 1800 ft. between the hills. At the highest point in the dam it will be 280 ft. thick at the base. It will be constructed by the rolled earth fill process with five to one and four to one slopes, and when completed will resemble a flat hill extending across the valley. The spillway will be of the Ogee type, with a concrete channel to the marsh, discharging about 250 ft. below the lower toe of the dam. The capacity of the spillway at maximum flood stage will be 6000 second foot or 12,000 acre feet in 24 hours. Besides this amount, the area above the spillway crest will act as a restraining basin and will have a capacity of 7000 acre feet.

LOS ANGELES, Cal.—Continental Diamond Drilling Co., Pacific National Bank Bldg, awarded contract by city purchasing agent, at \$12,650 (with estimate of additional sum of \$4030 for drilling over 3000 ft.) for core drilling on Route B, Mono Basin, Spec. 2148, for water and power department.

SEWERS AND SEWAGE DISPOSAL PLANTS

MOUNTAIN VIEW, Santa Clara Co., Cal.—Dudley DeVelbiss, 354 Hobart St., Oakland, at \$624 awarded contract by city trustees to construct sewage pumping plant with cast iron discharge main emptying into Mountain View Slough. Involving: 530 cu. yds. excavation; 3700 cu. ft. concrete; 11,700 lbs. reinforcing steel; two sewage pumping plants, including pumps, motors, etc.; 340 ft. 12-in. cast iron pipe pressure line; 700 ft. B. M. redwood timber; galvanized iron pump hose, wiring, etc.

Contractor is in the market for sub-bids in connection with this project.

BERKELEY, Alameda Co., Cal.—W. J. Tobin, 527 Santa Ray ave., Berkeley, at \$2349 submitted low bid to city council, to construct sewer in Hilldale ave., and in right of way from Hilldale ave. to Euclid ave., about 300 ft. south of Marin ave. Complete list of bids, all taken under advisement, follows:

W. J. Tobin.....	\$2349
Martin Murphy.....	2727
Jas. Chick.....	3469
J. C. Hickey.....	3648
Thos. Haefey.....	4849
Haefey-Moore Co.....	4015

PHOENIX, Ariz.—Bids will be asked about October 1 by the city council to construct sewage disposal plant; estimated cost 250,000. Holmquist and Maddock, Phoenix, consulting engineers.

SAN FRANCISCO.—Healy - Tibbetts Co., 64 Pine St., at \$128,433 submitted low bid to Board of Public Works to construct Section C of the Alameda Storm Drain to be financed from the Sewer Bond Issue. Project involves: 915 lin. ft. 2-compartment 8-ft. 6-in. x 11-ft. reinf. conc. storm drains exclusive of piles; 394 lin. ft. 2-ft. 6-in. x 3-ft. 9-in. reinf. conc. sewer exclusive of piles; 310 lin. ft. 8-in. V. C. P. underdrain covered with concrete or embedded in broken rock; 620 lin. ft. 10-in. V.C.P. underdrain covered with concrete or embedded in broken rock;

500 lin. ft. 12-in. V. C. P. underdrain covered with concrete or embedded in broken rock; 8 manholes, complete, on concrete sewers; 138,000 lin. ft. of timber piling. Complete list of bids follows:

Healy-Tibbetts Co.....	\$128,433
Ward Engineering Co.....	131,312
C. C. W. and H. H. Haun.....	141,022
McDonald & Kahn.....	142,955
C. B. Eaton.....	145,217
C. J. Nystedt.....	149,387
C. L. Harney.....	159,350
E. J. Treacy.....	160,732
L. J. Cohn.....	160,805

SAN FRANCISCO.—C. B. Eaton, 715 Ocean Ave., at \$41,970 submitted low bid to Board of Public Works to construct Section D of the Alameda Storm Drain, to be financed from the Sewer Bond Issue. Project involves: 16,200 lin. ft. timber piling; 1195 lin. ft. 14-ft. by 8-ft. wooden box sewer excluding piling; 600 lin. ft. timber center partitions; 236 lin. ft. 3-ft. x 4-ft. 6-in. wood box sewer excluding piles; 188 lin. ft. 12-in. V. C. P. sewer; 125 lin. ft. 10-in. V.C.P. culvert; 4 timber manholes; 3 side connection pipes; 1 connection from 14-ft. by 8-ft. box section to 2-compartment concrete section. Complete list of bids follows:

C. B. Eaton.....	\$41,970
Healy-Tibbetts Co.....	51,703
M. B. McGowan.....	51,774
Meyer Rosenberg.....	52,819
McDonald & Kahn.....	54,156
C. C. W. and H. H. Haun.....	56,918
C. J. Nystedt.....	57,953

BERKELEY, Alameda Co., Cal.—W. J. Tobin, 527 Santa Ray Ave., Berkeley, at \$2349 awarded contract by city council, to construct sewer in Hilldale Ave., and in right of way from Hilldale Ave. to Euclid Ave., about 300 ft. south of Marin Ave.

WATER WORKS

OAKLAND, Cal.—Until September 24, bids will be received by East Bay Municipal Utility District, 512 16th St., to furnish approximately 2022 tons of cast iron pipe, ranging from 4-in. to 16-in. diameter; bell and spigot, in the following quantities: 150 tons of Class "B" 4-in. diameter, 15,000 lin. ft. of Class 150 of 4-inch 404 tons Class "B" 8-in. diameter

—or—
616 tons of Class "B" of 12-inch diameter,

35,600 lin. ft. of Class 250 6-inch diameter.

17,000 lin. ft. of Class 250 8-inch diameter.

—and—
406 tons of Class "B" 6-in. diameter diameter,
437 tons of Class "B" 16-inch diameter.

Specifications obtainable from above office.

SAN FRANCISCO, Cal.—Kimbball Krough Pump Co., 147 Beale St., at \$2,674, awarded contract by B. P. Lamb, secretary, Park Commission, Park Lodge, Golden Gate Park, to install deep well turbine and motor near the Murphy Windmill in Golden Gate Park.

SAN FRANCISCO. — Industrial & Municipal Supply Co., 7 Front Street, at \$2,235 awarded contract by B. P. Lamb, secretary, Park Commission, Park Lodge, Golden Gate Park, to furnish and install two deep well turbines and motors at Sharp Park in San Mateo County.

SAN LUIS OBISPO, S. L. O. Co., Cal.—See "Power Plants" this issue. Ranchers to install electrified pumping and irrigation systems.

PHOENIX, Ariz.—Bids will be asked by city council about October 1 to construct water distributing system, drilling additional wells and constructing 48-inch supply line and 10,000,000-gal reservoir. W. J. Jamieson, city engineer.

PLAYGROUNDS & PARKS

STOCKTON, San Joaquin Co., Cal. City Landscape Architect Victor G. Anderson has completed plans for a roadway leading through Victory Park to the proposed Haggin Memorial Gallery and Museum. Plans will include an artistic bridge over the lagoon for the Pershing Avenue approach.

SAN DIEGO, Cal.—City defends proposal to issue bonds for \$435,000 to finance purchase and improvement of four public park areas.

STREETS AND HIGHWAYS

OAKLAND, Cal.—Until September 11, 12 noon, bids will be received by Frank C. Merritt, city clerk, to improve portions of Hermosa Ave. and Broadway Terrace, involving grading; concrete sidewalks; curbs, gutters, conduits and storm water inlets; sewer with appurtenances; wooden culvert; Imp. Act 1913. Certified check 10% payable to city required with bid. Plans on file in office of clerk, Walter N. Frickstadt, city engineer.

MILL VALLEY, Marin Co., Cal.—Until September 10, 8 P. M., bids will be received by Will Falley, town clerk (755), to improve portions of Summit Ave. and other streets involving vitrified pipe sewer; hydraulic concrete manholes; lampholes; wye branches and lateral; hydraulic concrete retaining wall; arch culverts; hydraulic conduit inlet. Project involves approximately 250,000 sq. ft. of hydraulic concrete pavement. Previous bids, providing for asph. conc. pavement were rejected and new proceedings started for the improvement. Est. cost, \$90,000; 1911 Act; Bond Act 1915. Certified check 10% payable to town clerk required with bid. Plans on file in office of clerk.

MARICOPA, Kern Co., Cal.—Until September 9, (to be opened Sept. 10, 7 P. M.), bids will be received by C. B. Warner, clerk, Maricopa High School District, for furnishing light dust-laying oil and apply same at school grounds. Specifications obtainable from above.

PALETO, Kern Co., Cal.—Until September 9, (to be opened September 10, 7 P. M.) bids will be received by C. B. Warner, clerk, Paleto Elementary School District, to furnish and apply light dust-laying oil at school grounds. Specifications obtainable from above.

SAN MATEO COUNTY, Cal.—Until September 24, 2 P. M., bids will be received by State Highway Commission to grade and pave with Portland cement concrete, 0.9 mile through South San Francisco.

See call for bids under official proposal section in this issue.

REDDING, Shasta Co., Cal.—W. C. Colley, 35 North Hampton St., Berkeley, at \$51,684.59 awarded contract by directors of Joint Highway District No. 11 to construct the Weed-Klamath road project (1st unit), comprising Section from Station 0 to 60 to 142 plus 15. Project involves: 9.8 acres clearing; 5144 cu. yds. trenching, excavation; 113 cu. yds. unclass. excavation for structures; 21,883 sta. yds. overhaul; 2.8 miles final earth graded road; 8.52 cu. yds. class C concrete, 91 lbs. reinforcing steel, 582 lin. ft. 18-in. G. C. M. P.

EL DORADO COUNTY, Cal.—Until September 24, 2 P. M., bids will be received by State Highway Commission to grade and surface with untreated crushed gravel or stone, 1.7 miles between Clark's Corner and L'Acerville.

See call for bids under official proposal section in this issue.

COLUMBIA COUNTY, Cal.—Until September 24, 2 P. M., bids will be received by State Highway Commission to surface with gravel base, 8.1 miles between Williams and Maxwell.

See call for bids under official proposal section in this issue.

SAN FRANCISCO.—Until September 17, 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to construct Section D of the Sunset Boulevard from Noriega to Irving street with connections to Lincoln Way estimated cost \$123,000, to be financed from the the Boulevard Bond Issue. Project involves:

- (1) 133,600 cu. yds. excavation;
- (2) 61,700 cu. yds. imported borrow;
- (3) 192,900 sq. ft. asphalt macadam pavement, 2½-inch asphalt concrete surface on 10-inch waterbound macadam base.
- (4) 38,600 sq. ft. asphalt concrete pavement, 2-inch asphalt concrete surface and 6-inch class F concrete base;
- (5) 242 tons of asphalt concrete conform pavement;
- (6) 90,700 sq. ft. 4-inch waterbound macadam pavement;
- (7) 45,700 sq. ft. 6-inch waterbound macadam pavement;
- (8) 13,500 sq. ft. 1-course concrete sidewalks;
- (9) 13,400 linear feet unarmored concrete curb;
- (10) 470 linear feet 2x6-inch redwood header;
- (11) 240 linear feet 18-inch V. C. P. sewer;
- (12) 240 linear feet 15-inch V. C. P. sewer;
- (13) 120 linear feet 12-inch V. C. P. sewer;
- (14) 570 linear feet 10-inch V. C. P. sewer;
- (15) 5 brick manholes;
- (16) 650 linear feet 3-inch black pipe conduit;
- (17) 2,100 linear feet 1½-inch black pipe conduit;
- (18) 3 9-unit yellow reflectors mounted on 2½-inch standard wrought iron pipe posts;
- (19) 2 "Keep-to-the-right" signs;
- (20) 920 cu. yds. loam;
- (21) 1,860 cu. yds. rubble;
- (22) 3 tons of hay for slope protection.

Plans obtainable from Bureau of Engineering, 3rd floor, City Hall, on deposit of \$10, returnable. Work to be completed within 180 days.

TRINITY COUNTY, Cal.—Until September 24, 2 P. M., bids will be received by State Highway Commission to grade 0.8 mile between western boundary and Burnt Ranch.

See call for bids under official proposal section in this issue.

SAN JOSE, Santa Clara Co., Cal.—San Jose Paving Co., San Carlos and Dupont Sts., San Jose, awarded contract by city council (5135) to improve Julian St., bet. Stockton and Morrison Aves., involving grading; pave with 2-in. asphalt conc. wearing surface, 3½-in. asphalt conc. foundation; cem. conc. curbs, gutters and walks; 8-in. cem. storm water sewer. Imp. Act 1911.

EUREKA COUNTY, Nevada.—Until September 10, 2 P. M., bids will be received by State Highway Commission, Carson City, Nevada, to furnish asphaltic fuel oil, apply and mix with crushed rock or crushed gravel surface on a portion of the state highway from Hay Ranch to Eureka, a distance of 11.65 miles. Specifications on file at office of U. S. Bureau of Public Roads, 461 Market St., San Francisco, and obtainable from S. C. Durkee, state highway engineer at Carson City. Certified check 5% required with bid.

OAKLAND, Cal.—Until Sept. 25, 12 noon, bids will be received by Frank C. Merritt, city clerk, to improve portions of East 12th St., involving grading; curbs; gutters; pave; cem. walks; drainage structures. 1911 Act. City will pay \$16,734 of total cost from Treasury. Certified check 10% payable to city required with bid. Plans on file in office of clerk. Walter N. Frickstad, city engineer.

OAKLAND, Cal.—Until September 18, 12 noon, bids will be received by Frank C. Merritt, city clerk, to improve portions of Marguerite Drive and Hillview Lane, involving grading; gutters; pave; cement walks; conc. gutters; storm water drain. 1911 Act. Certified check 10 per cent payable to city required with bid. Plans on file in office of clerk. Walter N. Frickstad, city engineer.

SAN FRANCISCO.—Until September 17, 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve 25th street bet. Fountain and Burnham streets, including crossing at Fountain street, involving grading; armored concrete curbs; 1-course concrete sidewalks; br. catchbasins; 12-in. vit. pipe sewers; vit. clay pipe side sewers; 6-in. Class E conc. pavement with 2-in. asphalt conc. surface and 6-in. Class F base pavement at crossing. Est. cost, \$4400. Certified check 10% payable to Clerk of the

Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

BUTTE COUNTY, Cal.—Until September 15, 2 P. M., bids will be received by C. H. Whitmore, district engineer, State Highway Commission, 502 State Office Bldg., Sacramento, for 5.0-miles of pit run gravel borders between north city limits of Chico and north county boundary.

BUTTE COUNTY, Cal.—Until September 15, 2 P. M., bids will be received by C. H. Whitmore, district engineer, State Highway Commission, 502 State Office Bldg., Sacramento, for 5.0 miles of pit run gravel borders between north city limits of Chico and north county boundary.

COLUMBIA COUNTY, Cal.—Until September 15, 2 P. M., bids will be received by C. H. Whitmore, district engineer, State Highway Commission, 502 State Office Bldg., Sacramento, for 5.0 miles of pit run gravel borders between 1 mile south of Arbuckle and Geneva.

YOLO COUNTY, Cal.—Until September 15, 2 P. M., bids will be received by C. H. Whitmore, district engineer, State Highway Commission, 502 State Office Bldg., Sacramento, for 5.0 miles of pit run gravel borders between Cache Creek and Zamora.

LIVERMORE, Alameda Co., Cal.—Until September 6, 11 A. M., bids will be received by Dr. C. W. Mack, Clerk, Livermore Union High School District, to haul earth from new plant of the Kaiser Paving Company near Pleasanton to the high school grounds. Specifications obtainable from clerk.

SEBASTOPOL, Sonoma Co., Cal.—City council declares intention (185a) to improve High street bet. Calder and Maple aves., and bet. Maple and Palm aves., and Palm and McFarlane aves., involving grading; 5-inch cement concrete pavement; cement curbs. 1911 Act, Bond Act 1915. Hearing Sept. 17. F. G. McFarlane, city clerk.

OAKLAND, Cal.—Until September 11, 12 noon, bids will be received by Frank C. Merritt, city clerk, to improve portions of Bullard Drive, involving grading; curbs; gutters and pave. 1911 Act. Certified check 10% payable to city required with bid. Plans on file in office of clerk. Walter N. Frickstad, city engineer.

OFFICIAL PROPOSALS

NOTICE TO CONTRACTORS

State Office Building at Los Angeles

SEALED BIDS will be received by
Geo. B. McDougall, State Architect,
at the Office of the Division of Archi-
tecture, 1025 Associated Realty Build-
ing, Los Angeles, California, up to 2
o'clock P. M., Tuesday, September 30,
1930, thereafter on said day to be pub-
licly opened and read for the General
Work in connection with the erection
and completion of the State Office
Building at Los Angeles, California,
in accordance with plans and specifi-
cations were prepared by John C.
Austin, Architect, of the firm of John
C. Austin and Fredrick M. Ashley,
Architects.

The State Office Building at Los An-
geles will be a class A structure faced
with granite and terra cotta. It will
be located at the new Civic Center on
property bounded by First, Spring,
Broadway and Court Streets, all in
the City and County of Los Angeles,
California.

Bids will be received for the Gen-
eral Work, also alternative bids as
follows:

Alternative on omitting a terrace,
driveway and retaining walls, more
particularly as described on page 44
in the specifications.

Alternative on substituting terra
cotta with brick backing in place of
granite with brick backing for certain
portions, as more particularly de-
scribed on page 54 of the specifica-
tions.

Alternate on leaving the garage un-
finished as more particularly described
on page 122 of the specifications.

The "General Work" bid will em-
brace all branches of the work, except
as listed below:

Granite Work.

Structural Steel.
Electrical Work.
Elevators.
Plumbing Work.
Heating Work.
Ventilation Work.

Plans and specifications are on file for examination in the office of the Division of Architecture, 1025 Associated Realty Building, Los Angeles, and at the principal California Cities Builders' Exchange Offices.

Plans, specifications, and proposal forms may be secured by qualified licensed Contractors or by Contractors who will qualify by furnishing a verified statement of experience and financial condition as required by the provisions of Chapter 644, Statutes 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Questionnaire forms may be secured from the Division of Architecture, either in Los Angeles or Sacramento.

Bids will not be accepted from a Contractor to whom a proposal form has not been issued and all bids must be on proposal form supplied by the State.

Application for plans shall be made to the Sacramento Office of the Division of Architecture, Public Works Building, Sacramento, and shall be accompanied by a deposit of Fifty (\$50.00) dollars. Check shall be made payable to the Department of Public Works, Division of Architecture. Deposit will be returned upon receipt of the set in good condition, at Sacramento Office of the Division within 30 days after opening bids, otherwise it will be forfeited to the State. All bids must be filed on or before the time heretofore stated and in accordance with the "Rules for Bidding" accompanying the proposal form.

No bid will be considered unless cash, a bidder's bond made payable to the State of California, or a certified check made payable to the "State Engineer, Department of Public Works," in the sum of at least ten per centum (10%) of the amount of the bid is enclosed with the bid.

The Division of Architecture, State Department of Public Works, reserves the right to reject any or all bids and to waive any informality in any bid received.

B. B. MEEK,
Director of Public Works.

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received by the Department of Public Works, Division of Highways, at the office of the District Engineer, 211 State Building, San Francisco, California, until 2:00 o'clock P. M., on Wednesday, September 17, 1930, at which time they will be publicly opened and read, for performing work as follows:

The erection and completion of a maintenance station in Mendocino County, about 3½ miles north of Ukiah which consists of the following group of buildings and appurtenances: Superintendent's cottage, truck shed, office and store house, loading platform, gasoline and oil house, septic tank, single wood shed, station sign and yard trellis.

The work of this contract comprises excavation, concrete and masonry work, carpentry and mill work; lathing and plastering, sheet metal work, painting, plumbing, heating and electrical installations.

Plans may be seen and forms of proposal, bonds, contract and specifications may be obtained at the above address.

A deposit of twenty-five dollars (\$25.00) will be required on plans and specifications, the deposit to be returned immediately on the return of the plans and specifications in good condition.

No bid will be received unless it is made on a proposal form furnished by the District Engineer. Each bid must be accompanied by cash or a certified or cashier's check made payable to the Director of Public Works, for an amount equal to ten (10) per cent of the amount bid, such guaranty to be forfeited should the bidder to whom the contract is awarded fail to enter into the contract.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DIVISION OF HIGHWAYS
C. H. PURCELL,
State Highway Engineer.
By JOHN H. SKEGGS,
District Engineer, District IV.
Dated: Tuesday Sept. 2, 1930.

NOTICE INVITING BIDS

(Mechanical Equipment—San Joaquin County Hospital)

Notice is hereby given that sealed Proposals will be received by the Clerk of the Board of Supervisors, of the County of San Joaquin, State of California, at the office of said Board until 11 o'clock A. M., Monday, September 23, 1930, for furnishing all labor, material and equipment necessary for the following work, to-wit:

For the Mechanical Equipment Work, and certain work supplementary thereto, in connection with the First Unit of the San Joaquin General Hospital, located near French Camp, in the County of San Joaquin, State of California, all in accordance with the plans and specifications prepared by Frederick H. Meyer, Architect, and adopted and filed by the Board of Supervisors, August 25, 1930, and to

which bidders are particularly referred.

Immediately after 11 o'clock A. M., Monday, September 23, 1930, the Board of Supervisors of the County of San Joaquin will publicly open the bids received in the office of said Board of Supervisors in the County Court House in the City of Stockton, County of San Joaquin, State of California.

All bids must be made on Proposal Forms to be obtained at the office of the Architect, Frederick H. Meyer, or the Associates, Davis-Pearce Co., and presented in sealed opaque envelopes, marked so as to denote the contents and addressed to the Board of Supervisors of this County.

All proposals must be accompanied by United States Currency, Certified Check, Cashier's Check or Bond made payable to the Chairman of the Board of Supervisors in the sum of 10% of the amount of the bid. A bond of 50% of the contract price will be required of the successful bidder to guarantee the faithful performance of said contract and a like bond for the faithful payment and satisfaction of all lawful claims of all persons for labor and material furnished in the prosecution of said contract.

Contractors who desire to bid on the work may obtain a complete set of drawings and specifications covering all the work to be included in this proposal at the office of Frederick H. Meyer, Architect, 525 Market Street, San Francisco, California, or at the office of Davis-Pearce Company, Associate, Builders Building, Stockton, California.

A cash deposit of One Hundred (\$100.00) Dollars will be required on each set of plans and specifications, which deposit will be returned when plans and specifications are returned to the office where deposit was made.

If any contractor decides not to submit a bid, the Architect requests that the plans and specifications be returned immediately.

Progressive payments will be made.

Said work must be done in accordance with the drawings thereon on file in the office of the Board of

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M. on September 24, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

Trinity County, between Westerly Boundary and Burnt Ranch (I-Tri-20-C), portions about eight-tenths (0.8) mile in length, to be graded.

Colusa County, between Williams and Maxwell (III-Col-7-B,C), about eight and one-tenth (8.1) miles in length, to be surfaced with a gravel base.

El Dorado County, between Clark's corner and Placerville (III-E-D-11-C), about one and seven-tenths (1.7) miles in length, to be graded and surfaced with untreated crushed gravel or stone.

San Mateo County, through South San Francisco (IV-S.M-68-A), about nine-tenths (0.9) mile in length, to be graded and paved with Portland cement concrete.

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a Contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineer's offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS,
DIVISION OF HIGHWAYS.

C. H. PURCELL,
State Highway Engineer.
Dated August 27, 1930.

"Short-term financing to meet the family needs brought about by its temporary impairment of ready cash resources, as frequently happens in business enterprises, has been made possible through the employment of one or more forms of what is known today as consumer credit," Hoopinger stated. In this connection he pointed out the important part played by consumer credit agencies as an aid in home financing. "Often a few hundred dollars cash, when badly needed, will do just as much to save a home as they do to help buy one at the start. There are many instances in which the utilizing of the family credit to secure a few hundred dollars in ready cash has prevented possible foreclosure on a home, and through the paying back of such loans by periodic payments of principal and interest spread over a substantial length of time, just as is found in the instalment payments on building loans themselves, the family has experienced no burden but on the other hand has conserved its capital assets and often actually added to its savings."

The speaker quoted from a survey made by the State Banking Commission in Wisconsin which showed that nearly one-fifteenth of the \$2,000,000 volume of credit extended through the legalized small-loan companies in

that state for the year 1923 went for the purpose of paying taxes, alone. "In Virginia an analysis of similar loans showed that nearly one-third of them were made for such purposes as to buy real estate, pay past due rent, pay past due insurance premiums, pay taxes on home property, make repairs on home, pay for fuel for the winter, etc. In another large industrial state 33.7% of the total number of such loans were found to be employed for such purposes as payments on home and home site, taxes, rent, repairs on home, coal, moving expenses and household miscellaneous."

"Co-operation in home financing," the speaker emphasized, "is necessary among all responsible agencies in developing and making effective proper standards of financing, design, materials and workmanship in home building as well as in permanently safeguarding the credit standing of the home owner in all of its phases." "The more such proper standards of quality construction and sound financing in home building and home maintenance can be maintained," the speaker concluded, "the safer will be the investment in the home and the more the prospective home owner's savings will go into a home of his own; and, therefore, the more the savings of our people in general will flow into home ownership instead of into other fields of investment."

S. F. WATER DEPARTMENT ADDS
153 WORKERS

One hundred and fifty-three employees have been added to the San Francisco Water Department since the city took over the system from the Spring Valley Water Company.

This addition, which represents a payroll increase of \$18,635 a month, was revealed by Nelson Eckart, manager of the system.

New construction work, and the speeding up of projects which the Spring Valley Water Company had left unfinished, made the increase necessary.

A "Pittsburg" Automatic Water Heater installed in the Home indicates high quality throughout.

Recommended and specified by all the leading architects, plumbers and builders.

Consider the high merit of the Pittsburg coupled with "Pittsburg Perfect Service."

"Hot water quick as a wink."

Pittsburg Water Heater Co.

Makers of "Pittsburg Automatic"—"Bungalow Automatic" Storage Systems and "Lyon" Tank Water Heaters.

Delay In Ordinance Adoption Halts Building

Failure of the Board of Supervisors to enact a proposed ordinance designed to protect banks and other construction investment concerns is holding up an extensive building program in San Francisco, according to John B. Leonard, superintendent of the Bureau of Building Inspection of the Department of Public Works.

The ordinance, providing for a list of certified building experts who would safeguard banks in making construction loans, has been before the supervisors for more than a year.

The board failed to approve it last Tuesday, action being postponed for two weeks.

"We can expect little if any large construction in the city until the ordinance is approved," said Leonard. "The banks want to protect their investments and we can hardly blame them."

"The proposed law authorizes selection of building experts, who would have to take a thorough examination before appointment. These men, for a nominal fee which the contractors would have to pay, would be on the job to compel builders to live up to loan contracts—thus performing the double duty of seeing that specified materials were used and that the banks were not fleeced."

Under existing building law, the banks are at the mercy of unscrupulous contractors, Leonard claims.

"This type of builder obtains \$1,000,000 from a bank to erect a building, by presenting plans which show that he contemplates a piece of construction to warrant such a loan."

"After he gets the money he makes changes in the plans which only an expert can detect. By doing this and using inferior materials he can pocket several hundred thousand dollars, and when the bank is forced to foreclose it finds itself fleeced."

"The inspectors provided in the ordinance, being city officials, would remedy this condition. They would protect the investor and the public at the same time."

Leonard said that the banks are refusing to make construction loans until they are assured of adequate protection.

"Plans for five or six large buildings have been drawn," he added. "Sites for them have been selected. They represent investments of more than \$10,000,000, and provide work for thousands of men. The banks would gladly advance the money if protected, but they will not move until their money is safeguarded. I can't blame them."

According to Leonard, the experts would draw no pay from the city, and enactment of the ordinance would not cost taxpayers a cent.

The Electrical Contractors' and Dealers' Association of San Francisco announces a change of name to the "San Francisco Electrigists."

REVISIONS IN CEMENT SPECIFICATIONS ADOPTED

Revisions in the Standard Specifications and Tests for portland cement, involving an increase in tensile strength requirements and the fixing of tolerances for the various pieces of apparatus used in testing cement, have been adopted by the American Society for Testing Materials following a favorable vote by the society's membership in a canvass held this month.

Eleven items in all were included in the revision, of which nine were concerned with tolerances for testing apparatus. According to the original report of Committee C-1 on cement of the society, lack of definite information on tolerances for testing apparatus in the former standard made it practically impossible to determine whether equipment did or did not meet specification requirements.

Revisions in the strength requirements include a change in the average tensile strength at seven days for the three standard mortar briquets from a minimum of 225 lb. per square inch to 275 lb. per square inch, and a change in the average tensile strength requirement at 28 days from a minimum of 325 lb. per square inch to 350 lb. per square inch.

These revisions in strength requirements will bring the minimum values more in line with the general strength level maintained by portland cement plants throughout the country. According to the committee's report, a survey of tests by 116 plants made during the latter half of 1928, indicated that only a small percentage of the samples tested failed to meet the new standard tensile strength requirements at the seven day and 28 day periods.

Specifications for high early strength portland cement were accepted for publication as tentative by the society's Committee E-10 on Standards, at its February 1930 meeting. Tentative specifications are the same as the newly revised specifications for portland cement, except that a maximum sulfuric anhydride content of 2.5 per cent instead of 2.0 per cent is permitted and that tensile strength requirements shall be 275 lb. per square inch at one day, and 375 lb. per square inch at three days. In addition, the purchaser has the option to require a test at 28 days in which the average tensile strength obtained shall be higher than the strength at three days.

Copies of the revised specifications for portland cement, and of the tentative specifications for high early strength portland cement, may be purchased from C. L. Warwick, Secretary-Treasurer of the American Society for Testing Materials, 1315 Spruce Street, Philadelphia, Pa.

National Ornamental Iron and Bronze Co., Inc., 431 Ninth street, San Francisco, has been admitted to membership in the San Francisco Builders' Exchange.

Educate Public To Building, Says George

In the current issue of the National Association of Builders' Exchanges bulletin, Wm. H. George, of San Francisco, president of the national association, answers questions on "Costs" and "Taxation." They follow:

(1. Question). Why is there somewhat of a stagnation in the construction industry at the present time?

(Answer). Because during the boom which the country has just passed through, building requirements generally were anticipated and we are now overbuilt.

(2. Question). If it is true that there is, however, coming up right along, special construction for special purposes that are needed by various industries, the state and country, why is it that banks and private parties controlling capital are reluctant to loan money for this kind of construction?

(Answer. A). Because they have not been educated to understand the soundness of this kind of investment.

(B). Because taxes are so high that they are afraid that if depression comes improvements will not rent for enough to pay taxes and reasonable interest on the investment.

(3. Question). What can be done to improve the tax question?

(Answer. A). Educate the public to protest against expansion of governmental activities of all kinds which require money and tax eaters.

(B). Send men to public office who will demand less government and more efficiency, more help to business and less chastising of business. Less tax eaters and less taxes."

UNIFORMITY OF AMERICAN PRODUCT SELLS ABROAD

A prominent engineer and corporation executive in a discussion in a meeting held some time ago in connection with The American Society of Mechanical Engineers stated that, although American structural steel costs more abroad than European steel, it was possible to construct buildings, using the American product, at a smaller total cost on account of its higher uniformity which permits the factor of safety required to compensate for irregularities in composition, dimensions, etc., to be somewhat reduced. The same man reported the case of an Englishman who spoke with some irritation of the high prices charged by American manufacturers for a certain steel which he used in machine production processes, and when asked why he did not buy a locally made steel to save this extra money, explained that he preferred to pay the higher price for American steel because of its great uniformity of composition and quality markedly reduced manufacturing costs and simplified tooling and inspection difficulties throughout the plant.

THE BUILDING INDUSTRY—IS THERE ANY? ASKS OUTSIDER

By Walter W. Hoops, Vice-President, Carroll Dean Murphy, Inc., in
"Printers' Ink"

There is a real challenge to advertising in the conditions—and also the opportunities—existing today in the building industry. I am referring here especially to the market for the more modest homes ranging in cost from \$10,000 down. The demand for "a home of our own" is universal; everybody wants one. Moreover, the majority of people thus aspiring to ownership have the capacity to pay. The producing power of the American wage-earner, the greatest of its kind in the world, is the force with which these aspirations can be backed up.

By all the rules of merchandising, therefore—rules that apply resultfully in the marketing of trade-marked commodities in general—home-building should now be progressing in rather an active way notwithstanding the cylinder depression which, combined with last fall's stock market crash, now presents something of a problem to current business. Yet we have the strange spectacle, comparing present conditions with those of 1926, of home-building being off possibly 75 per cent and employment in building lines cut fully in half.

One could say of any industry that there is "something the matter"—that, ideally, conditions could and should be better here and there. But that sort of viewpoint is not what I have in mind. Within the building industry there is a real issue, a definite problem, a vitally distressing situation.

What is going to be done about it and wherein is the challenge to advertising? The obvious answer is that a plan should be worked out, in a big national way, whereby the aspiring home-owner can make his purchase with at least an approach to the business procedure that obtains when he gains possession of any other worthwhile thing in which he may be interested. It is true that such operations have been going on in a limited way for the last two years. But they are sporadic and lack cohesion; they should be national in scope and thus make the building industry an industry in fact as well as in name—which it isn't right now.

The Plan of the Mail-Order Houses

The leading mail-order houses, for example, have launched a plan which provides, roughly speaking, that the home buyer shall be financed to the extent of 75 per cent of his purchase. This plan is meeting with startling success, despite the plainly apparent deficiencies and handicaps under which it labors. Even though the mail-order houses, except in a few isolated instances, have no local outlets and cannot take advantage of the selling prestige attached to nationally advertised materials for the reason that they do not handle them, they have done so far this year as high as 40 per cent of the small-home building in several cities. . . .

And right there is the challenge. The salability of nationally advertised trade-marks in building materials can be united with organizing genius. That this has not been done up to now is due primarily to the fact that the deplorable conditions about which I am speaking are subjects on which there is little agreement either within the industry or among its critics. This lack of agreement and correct visualiza-

tion is due to the utter lack of organization in building. President Hoover himself has become much concerned about the astounding building situation—so much so that he called a Building Survey Conference which met recently in Chicago. The net result of that conference was a resolution that a small committee be appointed to do further surveying and then to name a larger committee to represent all important elements in the business. But those in closest touch with conditions have no great hopes from this move beyond a possible loosely operating number of groups which will lack unified purpose because the building industry is not one industry but many.

What do we mean when we speak of the building industry? All who take part in building? That would mean the village carpenter who comes to repair your front porch, the small house contractor, the apartment house and skyscraper contractor. It would mean the great lumber, cement and other building material companies of all sizes down to the little manufacturer of sash pulleys, and the local concrete block plant. It would mean all the sub-contractors of all sizes in various trades. Also real estate subdividers and speculative house builders who consider themselves a part of the building industry. Any attempts to organize such varied activities and interest into anything which will cohere would appear impossible if it were desirable.

Group Consciousness

But the building industry is sub-organized by groups and has keen group consciousness. The manufacturers of similar lumber species have each their own group—redwood, oak, maple, white pine, yellow pine—and they are put together in the National Lumber Manufacturers' Association, which seeks to make lumber the preferred building material. Face brick, common brick, cement, lime—all of these are group conscious, organized, seeking preference for their products.

The lumber dealers have a national organization and so have the more important contractors—more group consciousness. This group idea is sound and natural as far as it goes. What it proves it that there is no such thing as a building industry—in the sense we mean when we say automobile industry. It is in fact a contract or job business.

If 95 per cent of all automobiles were built to order, if each one were built according to its owner's fancy, if it were built by local contract automaker who built five to ten a year, if he purchased his parts from the local parts dealers, if he took 10 per cent to 15 per cent down payment, if he got the rest of the financing from two different sources locally, if he gave the customer from five to 15 years to pay—but what's the use? If the automobile industry were operated that way it wouldn't be an industry. It wouldn't be organized. It would be the same crazy quilt of independent jobs that we see in the so-called building industry.

Furthermore, the automobile would not be the wonder of the world for the ever increasing value put into it. Well, you just can't think of the

automobile industry so disorganized. Yet we have to face the fact that the so-called building industry is just such a non-industry and that many of the difficulties to which it is recurrently subject arise because it is what it is.

If we were going to do any constructive thinking we must separate this vast variety of operations on some basis that puts like with like. So let us narrow the inquiry down to the construction of homes under \$10,000, which includes about 85 per cent of all homes built.

Of all kinds of construction, home building is currently the most depressed below previous records. For two years it has been thought to be at low ebb, but now it is lower than ever. The reason stated is lack of mortgage money, which on the surface is true. The underlying reason is a past over supply of mortgage money, over lending and speculative building, with no control of output or sales policy.

This cycle of easy money and much building, followed by tight money and little building, has been going on for many years, but the money ease and the resulting stimulation of the last peak were far greater than ever before. Thus the valley of depression is correspondingly more severe. It seems indeed strange that this valley of depression should have lasted so long. Never before have the American people had so much money with which to build homes as in these last two years. Never before have they had so much to put into savings banks, buildings and loan associations and life insurance. Yet they cannot borrow enough to build the homes they want. Yes, it seems strange until you realize how it was brought about.

When mortgage money was easy, lenders and their agents could not find enough good loans. The capital had to find employment, so it went into poor loans, which, since everybody was taking them, somehow or other managed to look good. Now so many of these poor loans have been proved to be so very poor that capital has lost confidence in appraised values of homes, and even good, sound loans are going begging for capital that refuses to believe.

Mortgage Money and the Stock Market

It has been popularly supposed that the supply of mortgage money in 1928 and 1929 was limited principally by more attractive opportunities in the stock market. Last summer, for instance, it was said that mortgage money was hard to get because much greater interest was forthcoming on call money in Wall Street. But this is true only to a limited extent. Insurance companies are the great source of mortgage money for home construction and they are not at all speculative in their operating plans. The chief problem of these companies during the last two years has been to find desirable mortgages. The truth is that the very ease of mortgage money supplied largely through the sale of collateral trust bonds and building and loan association stock has caused the misuse of this money by speculative dealers.

What made so many of these loans

poor loans? Take one example. A contractor is building a house for you. Mortgage money is easy and there is a vacant lot near by. He decides to build a house on his own account while building yours, because he can borrow almost the entire cost—the friendly lot owner going into the deal with him. As soon as the two houses are up and you are living in yours, he begins to figure he ought to make more than a contractor's profit on the other one. Soon you have a new neighbor who paid \$2000 more than you for, let us say, an identical house and lot. This establishes a new scale of "values." Selling houses at such profits looks like a good business, so the contractor finds a speculator who is willing to go into building several houses.

Suppose we had a building industry with several independent units organized from top to bottom, as we have in that, famously organized automobile industry, which was once largely an aggregation of parts makers.

Suppose these great national corporations are engaged in marketing complete homes everywhere in the United States. Operating through dealers; arranging economical financing; controlling construction and prices to insure value, volume to insure market; building quality houses through the use of nationally advertised materials. Such houses of real value, with the inflated speculative element absent, would not want for mortgage money; there is plenty of it to be had under those circumstances.

All the factors necessary to start several such firms are already in existence. The laborers and contractors and sub-contractors to execute the jobs—enough of them everywhere to insure keen bidding and close prices. Lumber dealers are everywhere handling all kinds of building materials. Each ready and willing to act as the focal point in his locality—the outlet. If you please, for one of these proposed large corporations. And there are enough lumber dealers nighly everywhere to make outlets for several such corporations and to secure competition between them.

There are hundreds of millions of dollars a year available from insurance companies seeking high grade, rock bottom mortgages on modest homes. There are hundreds of thousands of investors willing to buy collateral trust bonds, based on such mortgages when the character of the operations is made known.

Then why is this not being done? In the first place the idea has only crystallized in the last year. During the last six months it has become more or less understood by some manufacturers of building materials in some of the groups mentioned above. But by and large, the true reason the idea has developed no further is because of the too prevalent idea that it is somebody else's job.

Here, then, is a great opportunity for a few leading manufacturers of building materials to get together on this, purely on the basis of self interest, because, it could be operated to require the sale of the products. It is an opportunity for the investment banker to be the father of the finest mortgage bonds ever issued, based on the security which is our industries—the earning power of American workers. It is an opportunity for a life insurance president to make his company's loans, not all to seekers for money who always try to borrow the utmost, but to individual home owners to whom he has insured

good value by fathering the plan. It is an opportunity for advertised items in the building material line to cash in on a larger part of the salability, the consumer good-will, that has been created for them.

What the situation plainly needs is the will to study, master, grasp and promote the thing. Once in operation it will be recognized by all as being simple, natural and obvious. Wanted: a leader.

Home "Speculative" Projects Are Needed

In so far as business recovery depends upon expansion in building, it hinges chiefly on revival of residential construction—that means an expanding market for homes, says The Business Week. The rapid rise of public works and utilities construction this year, to the highest levels on record, has not compensated for the lag in residential building. The idea that a building boom and accompanying business revival may be generated by these kinds of construction has been exploded by a fairly definite test this year—perfect in most respects except that some preliminary planning might have put projects in process a bit earlier.

It was residential building that lifted business out of the 1921 slump. It is still houses that count. Residential building so far has run 48% behind last year, according to Dodge's figures, non-residential only 13% behind, public works and utilities 21% ahead of 1929.

There are some faint signs of pick-up. Residential contracts, measured in terms of index numbers which take account of seasonal fluctuations, have risen in the past few months, slipping back a little in July, but remaining above the low point reached early this year. There is every evidence that residential building has passed the low point. It must be remembered that it has at least two years of steady and rapid decline behind it.

Real estate activity as measured by number of transactions has been declining ever since 1925. Small house building reached its peak in 1925 and has been declining ever since. Residential building of all types for the entire country has been falling since early 1928. After a depression of such duration and severity it is to be expected that the liquidation of residential oversupply will be completed by the end of this year. The National Association of Real Estate Boards says the ratio of supply and demand in single-family and apartment houses is already healthy and normal.

Indications are that the revival of residential building will not come through houses erected singly, but through what is loosely and often unjustly called "speculative" building. Expenditures for this type, according to Dodge, have fallen off only 1% between the peak and low point of this building decline, for hotels 33%; for apartments 56%; for large scale house development projects 56%. It is in the last two classes that the depression has been worst, and that the recovery must and probably will come. They include normally about two-thirds of the total investment in residential building.

The depression may have resulted in improving the character of financing of building projects and real estate developments, putting them into stronger hands, eliminating the shoe-string operators, at least temporarily; but there is no reason to believe that

any great expansion of residential building can come without the large scale speculative production of housing for sale or rent in the form of real estate developments or apartment houses. It is into these channels that money flows easiest. Moreover, these types of building lend themselves best to lower-cost large scale production methods and so to a wider market demand.

It is in this field that technological improvements in materials and methods of construction to cut costs are being developed most rapidly. Whether the factory-built and locally assembled single house or the mechanically constructed apartment will win out remains to be seen; in any case, it appears that another boom in residential building must be a matter of large scale production and sale, at lower cost.

ARCHITECTS MAY SUPERVISE WORK THROUGH OTHERS

An architect may supervise work through others employed for that purpose and personal appearance on the job is not necessary in the opinion of Judge Leon R. Yankwich of the superior court of Los Angeles County, who gave judgment in favor of W. Douglas Lee against Fred Horowitz, attorney and owner of the fashionable Chateau Marmont apartment house in Hollywood, says Southwest Builder and Contractor.

Mr. Lee, who is an architect, and also a builder, had a contract for the construction of the concrete shell of the building for which he was to receive \$74,500. In addition to that, he was to supervise construction of the building. For this portion of the work he was to receive \$14,000. He sued for \$27,314.61, alleging that \$12,065 was due him on the building of the shell, \$10,958.15 on the supervision, and \$4290.85 for extras.

Horowitz contested the claim. He contended that Lee had broken his contract for supervision by not being on the job at least once a day, as required by the contract. He also claimed damages for faulty supervision.

The case was originally tried by Judge Edward W. Engs of Oakland, sitting in the Los Angeles superior court. He heard the evidence for several days, but died without deciding the case. It was therefore necessary to retry it. The retrial occurred before Judge Yankwich and lasted nine days. The plaintiff was represented by Patterson, Bailey & Montgomery. The firm of Willebrandt, Horowitz & McCloskey represented Horowitz.

Judge Yankwich gave judgment for the plaintiff in the sum of \$23,939.59. He allowed Lee the full contract price of supervision. This is taken as a ruling that, although an architect may not be personally present on the job, he is nevertheless entitled to compensation if the supervision is done under his direction. This on the theory that it is a substantial performance. Judge Yankwich allowed Horowitz \$3201.21 on his counter-claim for damages alleged to have been suffered through defective construction resulting from failure or defective supervision.

Judge Yankwich's ruling is taken to mean that one who is hired to supervise construction may exercise supervision through others. So doing, he substantially complies with his agreement. It is also taken to mean that the owner may recover from the supervisor for any defects in the work done by the sub-contractors, where it appears that they might have been avoided by more careful supervision.

THE OBSERVER

What He Hears and Sees on His Rounds

At a meeting of the Interstate Merchants' Council held in Chicago, 2,200 middle west retailers heard experts advocate aggressive campaigns to spur sales. Different speakers emphasized the fact that extensive advertising would get business whether there is a depression generally or not.

"Advertising has made this country as progressive as it is today," said V. B. Russell of the Dennison Manufacturing Company, who gave one of the addresses on the program. "It is the guiding star for mass production that has made it possible for the great middle class to live like kings. Advertising might be compared to light houses, the guiding light over poor business to a better day, and if we follow that guidance wholeheartedly we shall have very little to worry about."

"If you had a small boy and the bully of the streets were attacking him, would you wait until the fight was over or get into the scrap? You would assist him when he needed it of course. The moral is, don't desert your business when hard luck has pounced upon it, but bring to it the reinforcements of vigorous advertising and promotion."

Wm. H. George, president of the National Association of Builders' Exchanges and president of the San Francisco Builders' Exchange, has been selected by President Hoover to serve on the "Planning Committee" of a group selected to study home building. The conference is to be organized by a planning committee composed of representatives of the principal national interested groups.

Secretary of Commerce Robert P. Lamont is to be chairman and John M. Gries, who for several years was chief of the Division of Building and Housing in the U. S. Department of Commerce, will serve as executive secretary.

The conference will deal with such questions as finance, design, equipment, city planning and transportation.

The date of the conference will be determined by the planning committee. Funds have been provided privately to cover the entire research and other activities of the conference.

Architectural interest in Philadelphia will shortly center largely in the new 24-story Architects' Building now rapidly nearing completion and probably the most pretentious building of its kind in the United States. Completed it will represent an investment of close to \$2,500,000.

The building is owned by the Architects' Building Corporation, Inc., among whose stockholders are most of the local architectural firms. John Hall Rankin is chairman of the board and associated with him are Walter Thomas, vice-chairman; Geo. I. Lovatt, committee on materials; Philip H. Johnson, committee on supervision, and Victor D. Abel, executive in charge.

All but two floors of the building have been rented. The local chapter of the American Institute of Architects will have headquarters, including a library, on the top floor. The nine upper floors have been leased exclusively as architects' offices. At least one floor will be used for material exhibits.

That there is always a better way to do the job and that workmen are showing keen interest in trying to find that better way is indicated by a report of the General Electric Company showing that for the first six months of this year \$56,974 was paid to employees for suggestion of plans to improve their jobs. For the first half of the present year a total of 17,474 suggestions were made and 5616 were adopted, as compared with 13,200 suggestions offered the first six months of 1929 and an adoption of 3953 for which \$49,586 was paid employees.

California is beginning to climb out of the financial depression which has characterized the past few months throughout the country, according to a report made at the governor's council meeting by Will C. Wood, director of the state department of finance.

During the month of August, bank deposits, and particularly savings bank deposits, have continued their upward trend, the report said.

"While it is too early to draw the conclusion that business will show any decided improvement during the next two or three months, we have good evidence that there is a better tone and a more optimistic feeling among business men generally," Wood declared.

New applications filed for permits to sell securities continued to show an increase over the average number of applications during July, the investment director said.

Those plumbing contractors who think that the California State law requiring all contractors to have a state license, has no teeth, will be interested in knowing that a registered master plumber, T. O. Baldwin of Los Angeles, was fined \$100 for contracting work when he did not have a state license.

In the investigation made by the department of Professional and Vocational Standards, it developed that Mr. Baldwin had been contracting work without a state license, and before securing a license had sold a water heater to an owner on a lease contract. In addition to the fine, his license, secured subsequent to the alleged offense, was revoked pending adjustment of a claim by the manufacturer of the water heater.

The state law stipulates that diversion of funds, abandonment of work or failure to complete work, fraudulent departure from or disregard of plans and specifications, without consent of owner, wilful disregard and violation of state or municipal code or the safety laws or the labor laws of the state is unlawful and punishable by a fine not to exceed \$500 or imprisonment in the county jail for a term not to exceed six months, or by both fine and imprisonment.

Latest practices and methods in the matter of finding successful locations for industries will be brought before the two-day regional conference of the Industrial Property Division of the National Association of Real Estate Boards, to be held in Detroit, Mich., October 27 and 28.

Just what use can the industrial location expert make of the new census figures? Fred A. Gossnell, field supervisor of the Bureau of Census Distribution of the United States Department of Commerce, has calculated ways in which the newly compiled government statistics can be used in the selection of locations for industrial plants. Mr. Gossnell will report the results of his study of this matter before the conference in his address on "Using Census Figures as an Aid in Selecting Locations."

The man who would be successful in locating industries must have a complete understanding of the factors which govern the fortunes of industries, and those factors are not simple, stable influences, but are the constantly developing and changing and improving processes on which industry is dependent. Professor L. C. Sorrel, of the University of Chicago, will discuss in detail two of these factors at the Detroit meeting. Professor Sorrel will speak on "Recent Changes in Transportation and Marketing Affecting Plant Location."

C. E. Ward, New York City, industrial commissioner for the Erie Railroad Company, will address the meeting on "The Development of Industrial Property From a Railroad Point of View."

The Detroit conference will be attended not only by industrial realtors, but also by industrial location specialists from railroad companies, public utilities concerns and chambers of commerce.

A recent discovery of far-reaching importance and interest to home owners and prospective builders makes available grainless all-wood floors that may be worked into any pattern and finished in a variety of colors, tile or natural wood effects to beautify every room in a house according to the owner's individual tastes, said Brown Katzenbach, vice-president of the Masonite Corporation, in a talk before the meeting of interior decorators in Chicago.

"The trend in modern home building," said Mr. Katzenbach, "is to have 'natural' floors throughout the entire house that are both decorative and easy to keep clean, which eliminate the necessity of using expensive coverings. Such floors, within the reach of the average home builder's pocketbook, are now available through the discovery that by the application of an inwood finish to pressed wood boards, any design of colored pattern or natural wood effect may be obtained. The finish has a penetrating property that makes it an integral part of the grainless wood base and seals the surface against wear and dirt, obviating the necessity of frequent renewal of surface covering. Architects and builders say this discovery is one of the most important developments in house construction in years, as the combination gives an exceptionally durable, attractive and economical floor covering that can be laid at a nominal cost."

HINT FOR DRAFTSMEN

All draftsmen know that a pencil which drops or rolls off the drawing table almost invariably strikes point first, necessitating resharpening. To overcome this tendency, remove the metal tip holding the eraser from a pencil of that type and fill it partly with lead. This tip, when slipped on to the end of a drawing pencil, will cause the heavy end to strike the floor first and obviate much breakage. The same idea can easily be applied to lettering pens, ruling pens and similar instruments which may be damaged by falling.—Morton Schwalm, Philadelphia, Pa.

ALONG THE LINE

R. H. Thomson, who served as city engineer of Seattle, Wash., under a number of administrations previous to 1912, has been named to succeed William D. Barkhuff, who was killed in an automobile accident last month. Since leaving the service of the city, Mr. Thomson has been engaged in private practice.

Link-Belt Co., Chicago, Ill., announces the appointment of William Piez as European correspondent, with headquarters at Paris, France.

Ephraim Field, architect, formerly located at 318 American Bank Building, Oakland, announces the removal of his offices to 1535 Shattuck Avenue, Berkeley.

HERE — THERE —
EVERYWHERE

The American Society of Heating and Ventilating Engineers, a national organization, recently granted a charter for the formation of a Southern California chapter of the society. Headquarters are at Los Angeles.

The membership of the new chapter at present exceeds fifty. The officers of the new chapter are: O. W. Ott, president; E. L. Ellingwood, vice-president; H. B. Keeling, secretary; Leo Hungerford, treasurer.

The International Congress of Architects will be asked to hold its 1931 meeting in the United States, it is announced by the American Institute of Architects. The opening sessions are planned for Washington in connection with the annual convention of the institute. Later the congress would convene in New York, and, as a part of the architectural program of the World Exposition, in Chicago.

Five city officials will represent Alameda at the annual State convention of the California League of Municipalities at Long Beach the week of October 7. They are: City Manager C. E. Hickok, City Attorney Edward J. Silver, City Clerk William E. Varcoe, City Engineer Burnett Hamilton and City Physician Arthur Hieronymus.

PROSPERITY'S INDEX

The index of prosperity. In the opinion of Irving Fisher, Professor of Economics at Yale, horsepower used per worker is the best index of a nation's prosperity.

"Steam and electricity," he says, "more than all else, have increased the worker's pay, shortened his working day, increased his leisure time and revolutionized the world economically, socially and politically. In the short period between 1919 and 1925, inclusive, primary power per worker increased by 36.5 per cent, and this largely explains the even greater increase in productivity per wage worker—53.6 per cent between 1919 and 1927. In the United States, where power is most highly developed, wages are the highest in the world. In China, Mexico, India and other countries where power is least developed, wages are lowest."

TRADE NOTES

Weyerhaeuser Sales Co. (lumber), has opened a district sales office at 260 California Street, San Francisco, with W. E. Barwick in charge. A district office to cover the Southern California and Arizona territory has also been opened in the Chamber of Commerce Building, Los Angeles, with W. H. Morrison as district manager.

California Pacific Lumber Co., Ltd., of Los Angeles, with offices in the Citizens National Bank Bldg., Los Angeles, has been formed to conduct a wholesale business in Southern California, handling soft woods from the Pacific Northwest. Robert Forgie is president and manager; W. J. Nichols, secretary and treasurer. F. B. Cobb, the third owner, is a director.

Vista Del Rey Plumbing and Heating Supply Co., operated by E. Raymond Gardiner, has opened new quarters at the Junction of Lake street and the Castroville highway in Seaside, Monterey county. The company will engage in a general plumbing and heating business.

Construction of a new plant on a ten acre site on the Waterloo Road at Stockton, will be started within two months, it is announced by R. E. Le Tourneau, president of the Le Tourneau Manufacturing Company, builders of earth-moving and road building equipment. The new plant will be of steel welded construction and will cost \$40,000.

Work is nearing completion on the new \$100,000 plant of the Calrock Asphalt Company on the Santa Cruz-Davenport Highway, six miles northwest of Santa Cruz, and crushing operations will be started within sixty days. J. E. Hays is manager of the Calrock Company.

TERMITE PUBLICATION ISSUED
BY U. OF C.

A new publication on termites has just been issued by the experiment station of the college of agriculture, University of California. It is known as Circular No. 318 and is titled "Termites and Termites Damage." The result of two years' intensive research on termites and investigations as to the best methods of repairing structures damaged by termites and of preventing their attacks by proper building methods, it gives the most complete and authoritative information on these subjects published to date.

In addition to laboratory and field research the practical experience of architects, building inspectors, industrialists, and others concerned with housing problems was used to make the publication as up to date as possible. It abounds in illustrations which makes information readily available to all.

The circular is divided into three parts: (1) biological information; (2) the use of chemicals in termite-proof construction and repair work, and (3) construction methods.

Copies of the circular may be obtained from the college of agriculture of the University of California at Berkeley.

Additional information on termite damage may be obtained from the termite investigations committee at 215 Market street, San Francisco.

TRADE LITERATURE

Hay Foundry & Iron Works, Newark, N. J., has issued an elaborate illustrated brochure commemorating the completion of 100 years in business under the management of the same family. This contains illustrations of many modern buildings for which the company has erected the structural steel frames.

General catalog 20, issued by the Victor L. Phillips Co., Kansas City, Mo., is an exceptionally elaborate and attractive 608-page illustrated book describing in detail all items of the large line of construction equipment handled by this distributor. Besides this descriptive material, the back of the catalog contains a number of pages of useful information, including tabular freight rates from the various warehouses of the company to points in its territory.

"Modern Methods of Ash Handling" is the title of a new 24-page catalog illustrating several methods of handling ashes by pipe line, as well as by other types of conveyors, issued by the Brady Conveyors Corp., 20 West Jackson Boulevard, Chicago, Ill.

An article describing the new water-supply system for Fort Lauderdale, Fla., by F. J. Keis, which appeared in Engineering News-Record for February 20, 1930, has been reprinted by the De Laval Steam Turbine Co., Trenton, N. J., for general distribution.

Tinius Olsen Testing Machine Co., 500 North 12th St., Philadelphia, Pa., has issued a folder describing the Olsen Testing Machines for road materials.

ELECTRICAL APPLIANCE SALE
8.8% AHEAD OF 1929

Despite general business depression, sales of electrical appliances for the first half of the year were greater than in the same period last year.

Indicative of the gains made in the entire appliance field are the reports of the principal electric light and power companies to Electrical Merchandising on their appliance sales for the first six months. These reveal a total sales increase of 8.8% over the same period in 1929. The utility companies do about one-third of the total appliance business.

Somewhat of a surprise, also, in view of general conditions, is the fact that chief gains were made by the more expensive appliances; the smaller ones did not hold up so well. Refrigerators showed a 6% increase; ranges, 45%. Growing popularity of the ironer is indicated by a 34% increase; washers, 10%. Vacuum cleaners alone, of the major appliances, showed a falling off—4%.

OPENS S. F. BRANCH

Bates Valve Bag Corporation, with headquarters in New York City, has recently established branch sales offices in San Francisco at 1014 Thelan Building. The company manufactures "Bates" multi-wall paper bags for plaster and cement. The company has just completed the construction of a branch factory in Seattle. G. A. Culom is manager of the San Francisco offices.

Building Officials To Meet At Long Beach

Focusing the attention of city building officials and every branch of the construction industry on better building and building legislation, the 9th annual meeting of the Pacific Coast Building Officials' Conference will be held at Long Beach September 29 to October 4, inclusive.

Program and entertainment features announced by H. E. Plummer, president of the Conference and chief inspector of buildings, Portland, Ore., point to a gathering of exceptional interest and practicality. Convention headquarters will be at the Virginia Hotel. Following the usual custom, all general sessions and committee meetings are open to anyone desiring to attend.

Activities of the Pacific Coast Building Officials' Conference are centered around the maintenance and promotion of the Uniform Building Code prepared and published by the Conference. This code has been adopted and is in satisfactory operation in 81 municipalities, 72 of which are on the Pacific Coast. Interest in the code is increasingly widespread because of the number of cities using it and the additional number considering its use.

Open discussions of the code will occupy more than two days' time at the convention. This will include three informal breakfast discussions on enforcement, an afternoon presentation of six papers covering the entire code with a discussion following each, and parts of three days devoted to open discussions of proposed code additions and changes under the guidance of six code changes committees headed by building inspector chairmen.

A number of well qualified men have consented to present papers, among which are mentioned: A. C. Horner of San Francisco, "The establishment of limits for fire zones;" Henry D. Dewell of San Francisco, "Factors of safety in wood construction;" Leonard S. Smith, formerly of the University of Wisconsin, "Some neglected phases of our housing problem;" James F. Collins, director state department of professional and vocational standards, "Cooperation between building departments and the state in the licensing of contractors;" H. G. Ufer of Los Angeles, "Methods used by Underwriters Laboratories, Inc., in making standard fire tests;" R. L. Dunlap, fire prevention engineer Los Angeles county, "Fire prevention as related to theater construction;" Norman W. Kelch of Los Angeles, "Reinforced brick masonry;" and Jas. M. Evans of Los Angeles, "General problems encountered by an electrical inspector." Arrangements are being made for other papers of similar interest.

Entertainment has been planned for the wives of delegates. Group entertainment for all in attendance will include a spectacular night trip through a steel mill and an all-day excursion to the world-renowned Catalina Island.

Recognizing the practical value of the sessions, an increasing number of men is attracted each year to the conventions of the Pacific Coast Building Officials' Conference. Judging from the way reservations are being received this year, Conference Secretary David H. Merrill, whose headquarters are at Long Beach, estimates that this year's attendance will far exceed that of any previous year.

Ransome Concrete Machinery Co., Dunnellen, N. J., has issued Bulletin No. 125, describing the new Ransome 27-E Master Paver. This paver is the only one on the market using the double-skip pivot.

PACIFIC COAST BUILDING PERMITS SLUMP IN AUGUST

Following is a report of August, 1936, building permit activities in the Pacific Coast area as reported by building department executives in the cities listed, together with the valuation of permits granted in August, 1929, for comparative purposes:

CALIFORNIA

WASTE IN PRELIMINARY ESTIMATES WOULD BE AVOIDED WITH USE OF QUANTITY SURVEY

(By Louis LaBeaume, Director American Institute of Architects, at Fifth Annual Convention of American Institute of Quantity Surveyors in St. Louis, Mo., April 15, 1930)

The architect, of course, regards himself in moments of prosperity and active occupation as a very important member of the community and a very important member of the building industry. He has the idea that his training and his talents equip him to graphically set down on paper the requirements of the client with regard to his home, his factory or office building, or his church. He takes himself, as a rule, very seriously. Sometimes justifiably so, sometimes less justifiably so.

The architect's progress during the last half century in this country has been considerable and his prestige in the public eye has increased not a little.

Architects, Taking an Increased Attitude of Co-operation, With the Contractor and Sub-Trades

As the years have gone by, the architect has come to take his profession more and more seriously, and to take an increasing attitude of co-operation toward the contractor and the sub-contractor and the various persons whose efforts go to make up the finished building.

The architect may conceive a building on paper, and plan it wisely; he may design it beautifully, but it is only the program of a building until it is put into action by the forces of the building trades. It is true that it can give satisfaction as a prepared design, just as a play may give satisfaction by being read in the study, but the play only takes on its real value when its different characters are interpreted intelligently by the actors and properly directed by the stage manager. As the whole scheme of the play must be intelligently, sympathetically carried out by the persons on the stage so also all of these forces in the building industry are co-operative with the architect; and the wise architect realizes that it is only by the co-operation of these forces that a just and satisfactory result can be obtained.

The architect has come into a professional position only probably within the last two hundred years. But the great buildings of the past were designed by architects as far back as the Pantheon. Architects had charge of the work, but their relations were somewhat different from the professional attitude of the architect today. They were master masons, they were builders themselves in those days, and in many instances designed the building on the site, surrounding themselves with a corps of workmen,

craftsmen, carvers, glass makers, and metal workers, and they all worked together. Often some of the beautiful detail of the buildings in the past was in a measure improvised on the site by the carver, the sculptor, or the artisan in charge of the special bit of work. Today, much of that detail is designed on paper, although the architect still realizes that he must have the sympathetic cooperation of expert workmen in carrying out the work. He writes a specification, and definitely outlines what the work should be, what its character and qualities should be. But he may be ever so definite in that specification and yet be very much disappointed in the result.

The American Institute of Architects, of which I have the honor to be one of the directors, is seeking closer and closer cooperation with the contracting forces. It respects and honors all of the craft engaged in the building industry and wants to weave them into closer cooperation with the architect.

The New York Chapter and other chapters have been working assiduously to come into closer contact with actual craftsmen on the building, so that the brick mason and the stone mason and the carpenter and the various craftsmen on the building will feel that they are not doing a perfunctory work, not simply laying one brick on top of another, but really breathing some of the spirit of the design into their work so that they may take the same pleasure in the execution of the work which the architect sometimes takes in the designing of it and which clients sometimes take in possession of it (sometimes, not always).

Sinful Waste, Because of Present Day Repetition in Preparing Estimates

The Institute has been interested in the subject which is of such importance to you and all of us, namely, that of quantity survey, realizing that there is a terrible waste in the construction industry. There is a terrible waste in nature for that matter, and I am not so niggardly, not so parsimonious to decry all waste, I like to be wasteful at times myself; nevertheless, there is sinful waste in the repetition of work involved in preparing estimates for buildings.

The building industry in this country is only recently coming to put itself on a sound business basis, and

we all know the scant respect which, let us say, the ignorant public forty years ago had for the term, contractor.

I have as much confidence in my contractor as I have in my own father, trust him with a key to my safe deposit box. I have the box, I say that as a figure of speech. The reason for superintending a building is not to guard against dishonesty. It is simply to guard ourselves against our own mistakes and to interpret, with the contractor, the true intent of the drawings, not to set a guard against fraud or dishonesty on the part of building contractors.

I often hear today the lament that the good old days of honest workmanship have passed. I resent that, too, because I know of ever so many men in all of the building trades who respond to the appeal of good workmanship, and take just as much pride in their work as any of the builders who worked on the cathedrals in the past. It is sometimes true that their opportunity for glorious, artistic expression may not be so great. I know brick masons, I know painters, and cabinet makers who take just as pride in their work and are just as much artists in their way as we artists who pride ourselves on being the great designers of the building. Personally, my contact with those men has added to the joy of my own work and gives me the kind of pleasure I want to get out of my work. So much for the architect's relation to the building industry.

The architect is a business man. Under our form of building, he has to be. He has to be the fiduciary agent of his clients, he has to make the contracts for the actual execution of the work, he has to make a businesslike contract with everything set down in black and white, and though the owner sometimes regards him as his personal cat's paw or agent, I mean the ignorant owner, to get the best and as much as he can, the attitude of the modern architect is that of mediator, who tries to be as just and as fair to the owner, and he is on the job to see that each one gets his just due and that the letter of the bond is fulfilled. For that reason alone, if there are no other reasons for the existence of the architect, I am convinced in my own mind that the threat that is sometimes made against the architectural profession, to-wit: That the engineering fraternity and contracting fraternity would usurp the prerogative of the architect and furnish the owner with specifications and then "poppycock." There are a few every now and then who can be persuaded by a contractor or an engineer into believing that they are going to have their building designed, eliminating the architect and pay just for the building, but that scheme won't work if, granting the engineer and the contractor could draw the architectural profession entirely within their control and employ the architect as draftsman and designer and then go to the people of the United States and say, "We are designers," they would never get anywhere. So much for the architect.

Americans Like to Take a Chance, Don't Want to Know the Truth

You Quantity Surveyors are all engaged in the zealous mission to eliminate the elements of chance from the building industry. We architects share your enthusiasms for that mission, but we beg you to remember that the American people are a set of gamblers. They like to take a chance and they don't want to know the

truth. That is the psychological barrier you will have to leap over before you get that idea firmly planted in their minds.

No Question About the Economical

Value of Quantity Survey

There is no question about the economy wisdom, of a complete quantity survey, but just as some owners now think that they get a set of plans for nothing, some of them, they are evading the cost of the figures of a job, and if I should go to my richest friend in this town and tell him I wanted him to pay for taking off the items on the job, I would have to do a lot of missionary work before penetrating the ivory which encases this money-making apparatus. Of course, owners know in a general way that when nine contractors figure on a job, they are all spending their time and money, which goes into the cost of their overhead, and they know when one of them gets that job he is charging in his overhead the cost that has been accumulated by the nine jobs that he has lost before, but they don't like to face that fact. They want to wait for somebody else to come to that conclusion. That is your difficulty.

England Knows the Economic Value of Quantity Survey

Now, it would be an ideal thing, I think, for the public to recognize the waste that goes on in the building industry and to try to eliminate it by the program that you have in view, and I am sure the American Institute of Architects is committed to that ideal and I think they will cooperate with you in informing the public of the justice of that process. You know what we think of the English temperament, it is conservative. The English are a wise, hard-headed people and they know the economy of the quantity survey. When it comes to business, why business is business with them, and they realize the advantage of the elimination of the elements of chance in building.

Advices the Elimination of Gamble in Construction Industry

Now then, our contractors, some of them are not as sympathetic in all respects as they might be. Some fellows have a little sporting element in putting in a bid still. I think myself the sooner they get over that particular form of gambling, the better. Keep your gambling outside your business, have business as one thing and pleasure as another thing. We architects are trying to eliminate the element of gambling in our business.

We are in sympathy with this movement, to eliminate waste and chance. Think of the waste in the building operation when you have 23 bidders on a school house.

In all lines of industry wasteful competition is being eliminated as rapidly as possible. All the big men in industry are centering their attention on wasteful competition, and the only point is this: If you can eliminate wasteful competition and give the public the benefit of the saving, then you have accomplished something. The trouble with some of the combinations is they eliminate competition and keep the price up.

Quantity Survey Should Be the Public Interest

Now, we believe and I think you can get the public to believe in the quantity survey when it is shown to be in the public interest. All that the public will want to know is that the electrical contractor, or the plumbing contractor, or the brick or the mill men are not monarchs of all they survey.

Safety of Building

Loan Associations Told By Deputy Commissioner

California building and loan associations hold a unique record for safety, unparalleled by any other type of financial institution, according to a statement by Roy Dorothy, Deputy Building and Loan Commissioner, to Harry S. Wanzler, Sacramento, president, California Building and Loan League. No investment certificate holder in a California association has ever lost a dollar of his money since the reserve requirements for this type of investment were written into the California laws in 1907. The three most important factors of safety contributing to this splendid record are: First, the type of security required by law back of its loans—namely, first liens on real estate; second, the guarantee stock element; and, third, state supervision.

The statutes provide that for every loan made, the association must take a note secured by a first lien on real estate, usually on homes. Our statutes also provide for the issuance of guarantee stock which stock specifically guarantees all other stockholders and creditors against loss, and this guarantee stock must be kept unimpaired.

One of the most important provisions of law for the protection of the public's funds invested in building and loan associations is that requiring a thorough examination of the books, accounts and securities of every association in the state at least once each year. Not only do our examiners ascertain the true financial condition of each association annually, but the Division now employs a staff of appraisers who visit a large number of properties upon which the associations have made loans and determines the actual physical condition and value of the properties held as security. If it appears from these appraisals that any loans are excessive, the association is required to set up reserves to take care of possible losses on such loans.

As a further protection to the investing public, our laws make it a felony for any official or director of a building and loan association to make loans to himself, or to be personally interested in any loans made, even to the extent of accepting a commission thereon. Also all officers, directors and employees of associations having access to cash or securities are required to give good and sufficient bonds to the association, and all such bonds are required to be filed in the office of the Commissioner.

Furthermore, every association is required by law to make an annual written report at the close of its fiscal year, setting forth the true financial condition of the association, which report must be verified by the oath of its president and secretary. In addition to this report, there is a detailed called report required four times each year.

The Division of Building and Loan Supervision, which is by law charged with the duty of enforcing the laws and regulations under which building and loan associations operate, now employs thirty persons especially trained in this work, including expert examiners and appraisers. The expenses of the Division are met from funds contributed by the associations themselves, through annual assessments based on assets and levied by the State Building and Loan Commissioner under powers conferred by law.

CURTAINS PRODUCTION

Roy Barto, president of the Cadwallader-Gibson Co., Los Angeles, reports the production of Philippine mahogany

at the company's mills in the Philippines has been curtailed more than 60 per cent. Other large mills in the islands are making similar reductions and the small mills are closed, due to lack of orders.

LICENSE DEPARTMENT

Because many contractors failed to renew their licenses and the revenues of his office were thereby reduced, the Registrar of Contractors has been compelled to release a number of investigators from the field force, it was stated in the report of W. F. Collins, director of the Department of Professional and Vocational Standards, to the Governor's Council at Sacramento, August 28.

LOW PRODUCTION CONTINUES

Continuing the low production schedule maintained since late in May, a group of 350 mills reporting to the West Coast Lumbermen's Association for the week ending August 23 operated at 46.77 per cent of capacity. This compares with 47.21 per cent of capacity for the preceding week and an average of 63 per cent from January 1 to June 1.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1684).

R-3303-S ENGINEER, not over 35, graduate in chemical or mechanical engineering, with 4-7 years' experience as designer or estimator and a record indicating considerable initiative and executive ability. Salary \$200-250 per month. Permanent for right man. Apply by letter. Location, Northern California.

R-3316-S SAFETY INSPECTOR, experienced in accident and compensation insurance work. Permanent. \$150-200 month and travelling expenses. Headquarters, San Francisco.

R-3309-S ENGINEER, mechanical or electrical, not over 30 years, with 3 to 5 years' experience on hydroelectric plant operation for service and testing work. Must have mechanical skill, agreeable personality and be willing to travel. Salary about \$175 month and expenses in the field. Apply by letter. Headquarters, San Francisco.

K-312-W-1562-S SAFETY ENGINEER, technical graduate, mechanical or electrical. Should have had a varied engineering experience in industrial safety problems and understand the rating of risks for casualty insurance. Work will include many public relations. Salary \$8000 year. Apply by letter. Location, New York and some traveling.

R-3287-S PUMP DESIGNER, capable of working out problems without supervision. Previous experience in the design of centrifugal pumps necessary. Temporary. Salary open. Location, San Francisco.

R-3311-S DRAFTSMAN, first class mechanical or electrical with experience on high pressure steam plant layouts or substations. Salary \$200-225 month for experienced men only. Location, San Francisco.

R-3246-S RESEARCH CHEMIST, technical graduate with some experience in paint testing, for similar work in industrial laboratory. Salary \$175-200. Apply by letter with references and photo. Location, San Francisco.

ARCHITECT DENIED LONG TERM CONTRACT BASIS ON INCOME TAX

An architect rendering services under contracts extending over a period of more than one year and receiving part payment in advance is not entitled to report his income on the long-term contract basis, according to a ruling of the general counsel of the Bureau of Internal Revenue. The position of the architect is held to be different from that of a contractor who does not know until the work is actually completed whether he has sustained a loss or made a profit. Following is the text of the ruling, which is styled "General Counsel's Memorandum 7998:

Charest.—An opinion is requested as to whether the taxpayer is entitled to report income from his contracts as an architect, from the years 1925 to 1927, on the completed contract basis under the provisions of article 36 of Regulations 69.

The taxpayer is an architect and his business includes the drawing of plans to be used in the construction of buildings and the furnishing of the necessary supervision to secure the following of such plans by the builder. The taxpayer does no building or constructing himself. Beginning in 1924 he was engaged on a substantial extent as an architect for buildings taking more than one year to construct. Under his contracts drafting and supervisory services were required for periods extending over more than one year.

Payment of Fees

Under the contracts the taxpayer received 60 per cent of the fee upon the completion of the drawings, which included the specifications and general working drawings, exclusive of details. At the time that this 60 per cent of the fee was received less than 60 per cent of the costs allocable to such contracts had been incurred or paid. In a number of instances only 50 per cent of the costs had been paid or incurred when 60 per cent of the fee was received, and in one instance only 40 per cent of the costs had been incurred or paid.

The taxpayer contends that the income thus reflected for the first year is excessive, because there is not charged against the income a fair share of the cost of earning the same, while the income reflected for the subsequent year or years is unduly depressed because more than a fair share of the cost of earning that portion is charged against it. The taxpayer does not contend, however, that the costs incurred during the later period are incapable of fairly accurate ascertainment at the outset.

In other words, the taxpayer does not contend that he was compelled to make more drawings than he contemplated when the contracts were entered into, or that supervision was more extensive and hence more costly than he expected. By choice the taxpayer contracted to be paid in advance when he bargained for and received 60 per cent of the fee at a time when only 50 per cent or less of the cost had been incurred or paid.

Regulations Are Cited

The taxpayer, beginning with the year 1925, has kept his books upon the completed contract basis and has made income tax returns on that basis, claiming the right to do so by virtue of article 36 of Regulations 69. That article provides in part as follows:

Long-term contracts are taxable for the period in which the income is determined, such determination depending upon the nature and terms of the particular contract. As used herein the term "long-term contracts" means building, installation or construction contract covering a period in excess of one year. Persons whose income is derived in whole or part from such contracts may, as to such income, prepare their returns upon the following bases:

(b) Gross income may be reported in the taxable year in which the contract is finally completed and accepted if the taxpayer elects as a consistent practice so to treat such income, provided such method clearly reflects the net income.

Architect or Contractor

The taxpayer contends that his contracts were "long-term contracts" upon the ground that they were construction contracts covering a period in excess of one year. The taxpayer also contends that he drew the plans and supervised the erection of the buildings, and that he was accordingly the contractor of the buildings. It is the view of this office that the taxpayer did not build or construct anything, but simply drew the plans and supervised the work of construction in so far as necessary. The person who had the construction contract was the building contractor.

It is true that the services performed by the taxpayer under the contracts were coincident with the actual work of building, but the work done by the taxpayer could not be called building or construction work. It was rather in the nature of personal services. The case of *In re Harrington* (1 Fed. (2nd), 749), which held that engineering contracts might be reported on the completed contract basis, was decided under article 36 of Regulation 45, in which the only requirement was that the person so reporting be engaged in "contracting operations." It was conceded by the court, however, that under subsequent regulations in which a more restricted definition of long-term contracts is given, the engineering firm could not have reported its income on the completed contract basis.

One of the reasons why permission to report on a completed contract basis is given in the case of building, installation and construction contracts is the fact that there are changes in the price of articles to be used, losses and increased costs due to strikes, weather, etc., penalties for delay, and unexpected difficulties in laying foundations which make it impossible for any construction contractor, no matter how carefully he may estimate, to tell with any certainty whether he has derived a gain or sustained a loss until a particular contract is completed. This situation, however, does not obtain in the case of architects. None of the foregoing vicissitudes affect them.

If after plans have been drawn the owner desires to have them materially changed, thus causing the architect additional work and expense, the custom is to charge an additional fee to cover the same, and the additional fee is generally provided for by contract. The fact that there may be some disproportion in the net income reported each year, due among other things to the fact that the architect is paid partly in advance of services

rendered, does not justify a resort to the completed contract method of reporting income. As the contracts in the instant case only involved the drawing of plans and the supervision of construction to accord therewith, it cannot be held that the taxpayer's income was derived from building, installation or construction contracts within the meaning of the regulations.

It is, therefore, the opinion of this office that the taxpayer is not entitled to report his income as an architect on the completed contract basis.

BUSINESS REVIVAL "JUST AROUND CORNER"

A Consolidated Press dispatch from New York, dated Sept. 4, says:

Signs of a return to an active market were found on every hand in Wall Street today. One firm reports that in the past two weeks business has increased 10 per cent, most of which was accounted for by inactive accounts that have come to life again. Most of the new business, the firm reports, is on the buying side of the market, with a considerable slice of an investment nature.

Another house reported that of its new business over 90 per cent is in industrial stocks and over half in shares selling below \$50.

Two large houses, which were complaining a fortnight ago that they were showing a deficit, now declare they will show a profit on August owing to business done in the last week.

This pickup in activity is reflected in an increased number of want ads appealing for statisticians, customers' men, telephone clerks, page boys and other brokers and personnel.

One of New York's largest department stores announced today that 1,000 men and women will be added to its staff in the next month.

SAN JOSE FIRMS SHARE IN SCHOOL EXPENDITURES

The expenditure of \$1,240,000 voted for school expansion in San Jose this year allowed only \$123,553 to be spent in contracts to companies outside of Santa Clara county.

A large majority of the bond money, or 65 per cent, was spent directly in San Jose. Of nearly a million and a quarter dollars allowed for school housing, \$585,874 in contracts went to local contractors. Another 25 per cent, or \$239,067, was awarded in contracts to county contractors not residing in San Jose.

Walter L. Bachrodt, superintendent of schools, stated that these figures show local contractors to be more than equal to outside companies, many of which are larger organizations. He stated that due to comparatively low building cost, the school department was able to realize an extra \$100,000 worth of work on the schools that would not have been available five years ago.

BAKERSFIELD ARCHITECT IS INTERVIEWED IN N. Y.

Clarence Cullmore, Bakersfield architect, who, with his wife, recently returned from a three-month tour of Europe, had the pleasure of giving Paris his idea of California and American architecture. In the Paris edition of the New York Herald, issue of August 17, Mr. Cullmore was given six inches of space to express his ideas of architecture in the United States and particularly the Spanish type, so prominent in California. He did justice to both.

Building News Section

APARTMENTS

Sub-Bids Being Taken.

APARTMENTS Cost, \$150,000
SAN FRANCISCO. Pacific Ave. and Baker St.
 Three-story steel frame and concrete semi-fireproof apartments (six 6-room apts.)
 Owner and Builder—W. R. Voorhies, Inc., 369 Pine St.
 Plans by A. D. Janssen, 369 Pine St.

Sub Bids Being Taken.

APARTMENTS Cost, \$60,000
SAN FRANCISCO. NE North Point and Broderick Sts.
 Three-story frame and stucco apts. with brick basement (15 3-room apts.)
 Owner and Builders—Robinson & Johnston, 871 31st Avenue.
 Plans by Lawrence Ebbets, 320 Fulton Street.

Will have steam heating system, Kewanee boilers, composition 10-year roof and terra cotta tile, kelinator refrigeration, canvass walls and ceilings.

Plans Being Prepared.

APARTMENTS Cost, \$60,000
SAN FRANCISCO. Buchanan St. near Washington St.
 Three-story frame and stucco apts. with brick basement (12 3-room apts.)
 Owner and Builder—T. I. Strand, 822 26th Ave.
 Plans by Lawrence Ebbets, 320 Fulton Street.

Will be modernistic type of architecture.

Sub Bids Being Taken.

APARTMENTS Cost, \$40,000
SAN FRANCISCO. S Jefferson St. W Broderick.
 Three-story and basement frame and stucco apartments (6 5-rm. apts.)
 Owner and Builder—Ben Liebman, 1555 Francisco St.
 Plans by Lawrence Ebbets, 320 Fulton Street.

Automatic oil burning system, separate showers, brick basement, steel sash, etc.

Plans Completed.

APARTMENTS Cost, \$20,000
MARTINEZ, Contra Costa Co., Cal.
 One-story and basement frame and stucco apartments.
 Owner—Jas. F. Croll, Martinez.
 Architect—F. H. Slocombe, 85 Cambridge Way, Piedmont.
 Project will not go ahead for about two months.

Plans Being Figured.

ALTERATIONS Cost,
OAKLAND. Alameda Co., Cal. Madison and Lake Sts.
 Alterations and additions to one-story frame apts. (add porch, etc.)
 Owner—San Jose Bldg. & Loan Assn., 16th and San Pablo, Oakland.
 Architect—W. E. Schirmer, 700 21st St., Oakland.

Preparing Plans.

APARTMENTS Cost, \$500,000
LOS ANGELES. Calif. Sunset Blvd. near Kings Road.
 Sixteen-story reinforced concrete apts. (168 rooms).
 Owner—Wm. I. Moffett.
 Architect—L. A. Bryant, 6513 Hollywood Blvd., Los Angeles.

Plans Being Completed.

APARTMENTS Cost, \$150,000
OAKLAND. Alameda Co., Cal. Crescent Ave. near Santa Clara.
 Three-story frame and stucco apartments with Class C concrete garage.
 Owner and Builder—R. E. Mayer, 1129 McKinley St., Oakland.
 Architect—Douglas Stone, Great Western Power Bldg., Oakland.
 Bids will be taken in two weeks.

Contract Awarded.

APARTMENTS Cost, \$15,000
SAN FRANCISCO. E Mission Street N Excelsior St.
 Three-story and basement frame and stucco apartments (4 apts.)
 Owner—Steve Torrance.
 Plans by L. O. Ebbets, 320 Fulton St.
 Contractor—M. P. Jorgensen, 2225 No. Point St.

Segregated Bids To Be Taken in One Week.

APARTMENTS Cost, \$50,000
OAKLAND. Alameda Co., Cal. 35th St. near Telegraph Ave.
 Three-story frame and stucco apts. with concrete basement.
 Owner—Nelson Bros., 13th and E 36th Sts., Oakland.
 Architect—Chester Treichel, American Bank Bldg., Oakland.

Preparing Plans.

APARTMENTS Cost, \$275,000

LOS ANGELES, Cal. 1745 N Gramer-
cy Place.
Seven-story class A reinforced con-
crete apts. (87x166-ft.; 220 rooms).
Owner—Edith A. Kassing, 1745 North
Gramercy Place, Los Angeles.
Architect—E. W. Greene, 1612 Cosmo
St., Los Angeles.
Contractor—A. J. Showalter, 1354 N
Harper Ave., Los Angeles.

Plans Being Completed.

APARTMENT-HOTEL Cost, \$150,000
OAKLAND, Alameda Co., Cal. Lake-
side District.
Six-story and basement steel frame
and brick class C apartment-hotel
(100x115 ft.; 162 rooms; 2-3- and
4-room apts.)
Owner—Withheld.
Architect—L. H. Ford, 1435 Harrison
St., Oakland.
Segregated bids will be taken in one
week.

BONDS

MADERA, Madera Co., Calif.—Peti-
tions have been presented to the
county supervisors seeking bond is-
sue for \$100,000 to finance erection
of new county hospital.

SAN DIEGO, Cal.—November 4 bal-
lot will include proposal to vote bonds
of \$1,000,000 for new city and county
building on tidelands. Proposed build-
ing would house all departments of
both the city and county governments.

CHURCHES

Sub Contracts Awarded.

REMODELING Contract Approx., \$25,000
SAN FRANCISCO, California and
Franklin Streets
Remodel Sunday school basement.
Owner—First Church of Christ
Scientist.
Architect—Henry H. Guttererson, 526
Powell St., San Francisco.
Contractor—Moore & Madsen, 557
Market St., San Francisco.
Painting—D. Zellnsky, 165 Grove St.
Cabinet Work—Brass & Kuhn, 1917
Bryant St.
Plastering—Ed. Severenson, 928 Da-
rien Way.

Contract Awarded.

CHURCH Cont. Price \$16,339
DUNSMUIR, Siskiyou Co., Cal.
Two-story and basement concrete
church.
Owner—Roman Catholic Bishop, Sacra-
mento.
Architect—Harry Devine, California
State Life Bldg., Sacramento.
Contractor—R. Pedroncelli, Dunsmuir.

Contract Awarded.

CHURCH Cost, \$150,000
LOS ANGELES, Cal. 34th near Uni-
versity Ave.
Class A reinforced concrete and brick
church (85x130-ft.)
Owner—University Methodist Church.
Architect—C. R. Johnson, University
of Southern California, Los Ange-
les.
Contractor—Wm. Simpson Const. Co.,
Architects' Bldg., Los Angeles.

FACTORIES AND WARE-
HOUSES

Contract Awarded.

PLANT Cost, \$.....
KING CITY, Monterey Co., Cal.
One-story fireproof addition to pro-
duction plant (60x30-ft.; Mfg Milk
Products).
Owner—The Lactol Corp., 203 Cal-
ifornia St., San Francisco.
Plans by Eng. Dept. of Owner.
Contractor—Hugh Thompson, King
City.

Contract Awarded

HANGAR Cont. Price, \$3192
STOCKTON, San Joaquin Co., Calif.,
Municipal Airport.
Frame and galvanized hangar (4 plane
capacity; 50x60-ft.)
Owner—City of Stockton.
Plans by Lyle Payton, city engineer,
City Hall, Stockton.
Contractor—H. E. Vickroy, 1122 N.
Commercial St., Stockton.

Plans Prepared.

BAKERY Cost, \$——
SANTA BARBARA, Cal. E Mason St.
Masonry bakery (116-ft. frontage).
Owner—Geo. K. Freeman.
Architect—Henry W. Howell, 19 East
Canon Perido St., Santa Barbara.
Lessee—Western Bakeries.

Preparing Plans.

FACTORY Cost approx. \$10,000
RICHMOND, Contra Costa Co., Calif.
Extension of 13th St.
One-story brick sheet metal factory.
Owner—Richmond Paint Products Co.,
E. Duffy, president, 1401 Barrett
Ave., Richmond.
Architect—Withheld.
Bids will be taken in about 60 days.

Contract Awarded.

PRECooling PLANT Cost, \$——
RIVERSIDE, Riverside Co., Calif.
Two-story and basement reinforced
concrete pre-cooling plant (90x70
feet).
Owner—Casa Blanca Packing House.
Architect—None.
Contractor—Gay Engineering Corpora-
tion, 2650 Santa Fe Ave., Los An-
geles.

Plans To Be Prepared.

FACTORY Cost, \$——
OAKLAND, Alameda Co., Cal. 81st
Ave. near 14th Street.
One-story reinforced concrete factory.
Owner—Blue Bird Potato Chips, Inc.,
68th Ave. and Beck, Oakland.
Architect—Not Selected.

LOS GATOS, Santa Clara Co.,
Calif.—R. J. Swan of the San Jose
Flying Club plans immediate con-
struction of a factory in Los Gatos
for the building of gliders.

Sub Bids Being Taken.

SHOE & LOFTS Cost, \$30,000
SAN FRANCISCO, N Howard W 7th
Street.
Two-story and mezzanine floor con-
crete shop and loft.
Owner—D Harband.
Engineer—A. C. Griewank, 208 Mis-
sion St.
Contractor—Schultz Const. Co., 46
Kearny St.
Sub bids are wanted on rein. steel,
structural steel and plumbing.

Plans Being Prepared.

ADDITIONS Cost approx. \$150,000
OAKLAND, Alameda Co., Cal.
Brick and concrete additions to ter-
minal depots.
Owner—Drayage Service Corp., 1640
18th St., Oakland.
Plans by Eng. Dept. of Owner.

Plans Being Completed.

CREAMERY Cost, \$——
SAN FRANCISCO, 18th and York Sts.
(137-6x200-ft.)
Two-story and basement class B con-
crete creamery (foundation laid
for two additional stories to be
added later).
Owner—Challenge Creamery and But-
ter Assn., 307 Montgomery St.
Architect—Dodge Riedy, Pacific Bldg.
Bids will be taken in two weeks.

Plans Being Completed.

WAREHOUSE Cost, \$125,000
SAN FRANCISCO, 11th and Bryant
Streets.
Two-story reinforced concrete central
storage warehouse (flat slab con-
struction).
Owner—City and County of San Fran-
cisco.
Architect—Dodge Riedy, Pacific Bldg.
Bids will be taken in about 3 weeks.

Correction In Owner's Address.

MFG. BLDGS. Cost, \$150,000
SALINAS, Monterey Co., Cal.
Group of rubber manufacturing bldgs.
Owner—American Rubber Producers,
Inc., Alisal Road, Salinas.
Plans by Eng. Dept. of Owner.
Contractor—F. Reese, 158 Central
Ave., Salinas.

Main building will be one-story con-
crete, wood frame and corrugated iron
(102x100 feet). Sub-bids will be taken
shortly.

Contract Awarded.

LAUNDRY Cost, \$12,000
SAN FRANCISCO, S Lombard St. E
Steiner St.
Two-story and basement frame laun-
dry (flat above).
Owner—L. Pouey, 747 Call Bldg.
Architect—R. R. Irvine, 747 Call Bldg.
Contractor—Louis Franceschi, 125 Cer-
vantes Street.
Will have concrete floor and founda-
tions.

Bids Being Taken.

INDUSTRIAL BLDG. Cost, \$——
SAN FRANCISCO, SE Russ St. and
Howard St.
Three-story reinforced concrete in-
dustrial building.
Owner—Eng-Skell Co., 208 Mission St.
Engineer—A. C. Griewank, 208 Mis-
sion Street.

Bids are now being received on deep
well, turbine pump and boiler, steel
sash and electric work. Plans may be
figured by contractors at the office of
Mr. Griewank.

MARTINEZ, Contra Costa Co., Calif. Reinforced concrete signal tower.
 Owner—Southern Pacific Railroad Co., 65 Market St., San Francisco.
 Plans by Eng. Dept. of Owner.
 Contractor—Spivock & Spivock, Hobart Bldg., San Francisco.

OAKLAND, Alameda Co., Cal.—Following bids received by John H. Kimball, secretary, East Bay Municipal Utility District, 512 6th St., to furnish approximately 1350 lin. ft. of six foot chain link fence with posts and gates, as provided under Proposal No. 241: (Alta 1), omission of top rail.
 Chain Link Fence Co., \$1753; (1) \$1,537.

Trask & Squier Co., San Francisco, (1) \$1700.
 California Orn. Iron & Fence Co., Oakland, (1) \$1895.
 California Wire Cloth Co., Oakland, (1) \$1,895.
 Standard Fence Co., San Francisco, (1) \$1895.
 Maxwell Hardware Co., Oakland, \$2,083; (1) \$1895.
 Michel & Pfeffer Iron Works, San Francisco, \$2083; (1) \$1895.
 West Coast Wire & Iron Works, San Francisco, \$2083; (1) \$1895.
 Talman Fence Co., San Francisco, \$2083; (1) \$1895.
 Bids held under advisement until Sept. 10.

Contract Awarded.
GOLF COURSE Cost, \$12,500
SAN FRANCISCO, S Market St. bet. 14th St. and Van Ness Ave.
 Miniature golf course.
 Owner—A. Stern, Alexander Bldg.
 Architect—R. De Witt Norris, William Taylor Hotel.
 Contractor—A. J. Stern, Alexander Building.

Reinforcing Steel Contract Awarded.
GRAND STAN, ETC. Cost, \$1,250,000
SAN FRANCISCO, Fifteenth St. and Potrero Avenue.
 Baseball Park, class A steel and concrete grandstand, 1000 ft. long.
 Owner—San Francisco Baseball Club, 15th and Valencia Sts.
 Engineer—H. J. Brunner, Sharon Building.
 Contractor—Lindgren-Swinerton, Inc., 225 Rush St.
Reinforcing Steel—Pacific Coast Steel Corp., 215 Market St.
 As previously reported, lumber contract awarded to Christensen Lumber Co., 5th and Hooper Sts.; lawn sprinkler system to The Turner Co., 329 Tehama St.; excavation to Sibley Grading & Teaming Co., 165 Landers St.

Preparing Plans.
TOWER Cost, \$—
LOS ANGELES, Cal. Western Ave. near Wilshire Blvd. (4-acre site).
 Observation tower (600 ft. in height and 100 ft. square at base; stores, shops and cafe will be provided).
 Owner—Los Angeles Tower Co., Ltd., Pershing Square Bldg., Los Angeles.
 Architect—A. Godfrey Bailey, Hillstreet Bldg., Los Angeles.

MISCELLANEOUS SUPPLIES AND MATERIALS

ANTIOCH, Contra Costa Co., Cal.—Anchor Post Fence Co. of California, 460 5th St., San Francisco, at \$3,197.14 awarded contract by city clerk to furnish all materials and labor for building protection fence 8,763 ft. in length around Antioch Municipal reservoir.

Following is a complete list of bids: Anchor Post Fence Co., S. F. \$3,197 Calif. Orn. Iron Fence Co., S. F. 3,444 Standard Fence Co., S. F. 3,923

EL CERRITO, Contra Costa Co., Cal.—Until September 29, new bids will be received by city council to furnish and deliver oil and gasoline as required by various municipal departments. Previous bids rejected. Specifications on file in office of clerk.

BUSINESS OPPORTUNITIES

Michigan Seamless Tube Co., South Lyon, Michigan, manufacturing cold drawn seamless steel tubing, desires to secure a reliable, well-established sales representation in San Francisco and surrounding territory.

David W. Stallard, Matteson-Forgarty-Jordan Co., 307 North Michigan Ave., Chicago, Ill., desires manufacturer's agent to represent his line of notions in this city and surrounding territory.

OFFICIAL PROPOSALS

September 5, 1930
STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M. on October 1, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

San Mateo County, between San Mateo and Redwood City (IV-S.M.-88-C), about seven and three-tenths (7.3) miles in length, to be surfaced with bituminous treated crusher run base.

Los Angeles County (VII-L.A.-60-F) a bridge across Alamitos Bay near Long Beach, consisting of fifteen 19-foot timber spans with concrete deck and one 41-foot 4-inch steel beam removable span.

Los Angeles County, at Castaie Creek VII-L.A.-4-A), about one (1.0) mile in length, to be graded and paved with Portland cement concrete.

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a Contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of proposal bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding,

Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received by the Department of Public Works, Division of Highways, at the office of the District Engineer, 211 State Building, San Francisco, California, until 2:00 o'clock P. M., on Wednesday, September 17, 1930, at which time they will be publicly opened and read, for performing work as follows:

The erection and completion of a maintenance station in Mendocino County, about 3 1/4 miles north of Ukiah which consists of the following group of buildings and appurtenances: Superintendent's cottage, truck shed, of-

fice and store house, loading platform, gasoline and oil house, septic tank, single wood shed, station sign and yard trellis.

The work of this contract comprises excavation, concrete and masonry work, carpentry and mill work; lathing and plastering, sheet metal work, painting, plumbing, heating and electrical installations.

Plans may be seen and forms of proposal, bonds, contract and specifications may be obtained at the above address.

A deposit of twenty-five dollars (\$25.00) will be required on plans and specifications, the deposit to be returned immediately on the return of the plans and specifications in good condition.

No bid will be received unless it is made on a proposal form furnished by the District Engineer. Each bid must be accompanied by cash or a certified or cashier's check made payable to the Director of Public Works, for an amount equal to ten (10) per cent of the amount bid, such guaranty to be forfeited should the bidder to whom the contract is awarded fail to enter into the contract.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DIVISION OF HIGHWAYS

C. H. PURCELL,

State Highway Engineer.

By JOHN H. SKEGGS,

District Engineer, District IV.

Dated: Tuesday Sept. 2, 1930.

URGES MORE ADVERTISING

More advertising to relieve the present depression in business was advocated by Frederick M. Snyder, Redpath Chatauqua lecturer, at a meeting of the Watertown (N.Y.) Kiwanis Club recently.

"Merchants should advertise zealously," said Mr. Snyder. "Advertising is the respiration of business. When respiration becomes heavy you should advertise more. The merchant who does not advertise is like the fellow who winks at a pretty girl in the dark. He knows what he is doing, perhaps, but nobody else does."

DAILY PACIFIC BUILDER

The only daily construction newspaper affording complete coverage of the construction activities in Central and Northern California—featuring work contemplated, bids wanted, bids opened, contracts awarded, sub-bids wanted and sub-contracts let on all types of building construction; bridges, dams and harbor works, irrigation projects; machinery and equipment; water works and supplies; business opportunities; building permits; building contracts, mechanics' liens; acceptances, etc., etc.

Keep informed on construction developments in Central and Northern California, and the major projects in Southern California, the states of Oregon, Washington, Nevada and Arizona.

Engineering News Section

BRIDGES

AUBURN, Placer Co., Calif.—Palm Bridge & Iron Works, Sacramento, at \$6955 awarded contract by county supervisors for cables and steel to be used in the 210-ft. bridge to replace the Colfax-Forest Hill span which recently fell into the river. Structure will be 12-ft. wide with steel and asphalt floor. The county will construct the bridge. Complete list of bids follows:

Palm Bridge & Iron Works, Sacramento, \$6,955.

John A. Roebeling Sons Co. (cables only), San Francisco, \$2,079.

Moore Dry Dock Co. (including erection), Oakland, \$11,400.

Minneapolis Steel Co., Los Angeles, \$7,493.

Pacific Coast Engineering Co., Oakland, \$7,150.

Paynes Bolt Works, San Francisco, \$7,090.

Ralph Hunter (includes erection), Sacramento, \$12,500.

Smith Bros. (erection only), Eureka, \$2,172.

J. De Pierre (erection only), Reno, Nevada, \$1,400.

LOS ANGELES COUNTY, Cal.—Until October 1, 2 p. m., bids will be received by State Highway Commission to construct bridge over Alamitos Bay near Long Beach, consisting of fifteen 19-ft. timber spans with concrete deck and one 41-ft. 4-in. steel beam removable span.

See call for bids under official proposal section in this issue.

REDWOOD CITY, San Mateo Co., Cal.—V. Dizillo, Redwood City, at \$7,502.37 awarded contract to construct nine reinforced concrete culverts on the Woodside Road at the following streets: one at Linden St.; one at Madrone St.; one at Locust St.; one at Cypress St.; one at Murray Court; one at Central Ave.; one at Bonita Ave.; one at Nueva Ave.; one at Orchard Avenue.

EUREKA, Humboldt County, Cal.—Smith Bros., Eureka, at \$4866 awarded contract by county supervisors to construct Moseley Slough Bridge with alternative bid of \$6768.

EUREKA, Humboldt County, Cal.—Henry Padgett, Eureka, at \$9,367 awarded contract by county supervisors to construct Riverside bridge with alternative bid at \$4484 using one span of the present structure.

OAKLAND, Calif.—Until September 23 bids will be received by George Gross, county clerk, to construct two concrete bridges across Crandall Slough, between Alvarado and Centerville; estimated cost \$50,000. Project involves:

- (1) 500 cu. yds. excavating for structure below bridge.
- (2) 2,500 cu. yds. excavating for structure above bridge.
- (3) 1,800 cu. yds. grading.
- (4) 14,000 sq. ft. 3-inch W. B. macadam.
- (5) 1,570 cu. ft. concrete.
- (6) 267,000 lbs. reinforced steel.
- (7) 200 lin. ft. 12-inch corrugated iron pipe.

Plans on file in office of clerk. Geo. A. Posey, county surveyor.

YUBA CITY, Sutter Co., Cal.—Until Sept. 29, 2 P. M., bids will be received by Albert B. Brown, county clerk, to reconstruct portion of the Nicolaus Bridge over the Feather River at Nicolaus; estimated cost, \$45,000. The work will consist of one center pier with two steel spans on each end of pier. Certified check 10% required with bid. Plans obtainable from county clerk on deposit of \$5, returnable.

LOS ANGELES COUNTY, Cal.—J. F. Knapp, Financial Center Bldg., Oakland, at \$113,377 awarded contract by State Highway Commission to construct a reinforced concrete bridge over the San Gabriel river near Seal Beach, consisting of seven 57-ft. spans on concrete piers with pile foundations.

BUTTE COUNTY, Cal.—G. D. Griffith and H. Gunther, Sacramento, at \$6577 awarded contract by State Highway Commission to construct a reinforced concrete bridge over the state highway 1-mile east of Oroville, consisting of one earth-filled arch span, 46 ft. long.

LOS ANGELES COUNTY, Cal.—As previously reported, bids will be received October 1 by State Highway Commission to construct a bridge over Alamitos Bay, near Long Beach, consisting of fifteen 19-ft. timber spans with concrete deck and one 41-ft. 4-in. steel beam removable span. Project involves: 16,000 lin. ft. furnishing creosoted Douglas fir piles; 248 each driving creosoted Douglas fir piles; 135 M. ft. board measure redwood timber, dense, select all-heart structural grade; 93 M. ft. board measure redwood timber, select all-heart structural grade; 105 cu. yds. Class A Portland cement concrete (structure); 410 cu. yds. Class A Portland cement concrete (pavement); 25 cu. yds. Class E Portland cement concrete; 48,000 lbs. reinforcing steel; 92,000 lbs. structural steel; 1 lot misc. items of work.

VISALIA, Tulare Co., Cal.—L. C. Clark, Visalia, at \$2448.97 awarded contract by county supervisors to construct reinforced concrete bridge over Deep Creek, known as bridge No. 89, involving: 1.01 cu. yds. class F concrete; 183.95 cu. yds. class A concrete, including excavation; 250 cu. yds. fill. All material to be furnished by the county f.o.b. Farmersville Siding on the S. P. Ry. Complete list of bids follows:

L. C. Clark, Visalia.....\$2448
Emmett C. Lipscomb, San Diego 2723
Twardle and Lamb, Morro Bay 2778
Fred A. Kame, Visalia.....3043
Adell & Cortwright, Hanford.....3170
R. Hodgson & Sons, Porterville.....3223

VISALIA, Tulare Co., Cal.—L. C. Clark, Visalia, at \$7873.98 awarded contract by county supervisors to construct three reinforced concrete bridges over three branches of "Outside Creek," known as Bridges No. 91A, 91B and 91C, involving: 477.84 cu. yds. class A conc. incl. excavation; 38.12 cu. yds. class F conc.; 54.96 cu. yds. class A conc. in pavement; Lump sum bid on wooden guard rail

incl. material; 1000 cu. yds. earth fill. All material to be used will be furnished by the county f.o.b. Farmersville Siding on the S. P. Ry. Complete list of bids follows:

L. C. Clark, Visalia.....\$ 7,873
Fred A. Kame, Visalia.....8,514
Twardle and Lamb, Morro Bay 8,945
R. Hodgson & Sons, Porterville 9,355
Adell and Cortwright, Hanford 10,147

PORTLAND, Ore.—County Roadmaster George W. Buck is preparing plans to reconstruct Hawthorne Avenue bridge; estimated cost \$155,000. Will involve redecking, rebuilding the approaches and surface with a non-skid black top pavement.

STOCKTON, San Joaquin Co., Cal. See "Sewers and Sewage Disposal Plants," this issue. Three bridges contemplated in connection with Mormon Channel improvements.

DREDGING, HARBOR WORKS & EXCAVATIONS

SAN FRANCISCO.—Constructing Quartermaster, Fort Mason, is preparing plans for a reinforced concrete seawall to be constructed at Fort McDowell. Will be 500-ft. long and from 10-ft. to 20-ft. in height.

SANTA BARBARA, Cal.—Until 2 p. m., Sept. 11, bids will be received by the city council to construct the East Cabrillo Blvd. wall or revetment. The only bid submitted August 21 was rejected August 28. The work involves:

- (1) furnishing and placing 13,500 tons rip-rap on outside of bulkhead;
- (2) furnishing and placing 1500 tons rip-rap on inside of bulkhead;
- (3) furnishing and placing 4000 tons asph. between rip-rap;
- (4) furnishing and placing 850 lin. ft. of creosoted sheet piling or 21,500 sp. ft.

Geo. D. Gelb is the city clerk.

MARYSVILLE, Yuba Co., Cal.—Until September 18, 3 p. m., under Proposal No. 31-70, Specifications No. 2405, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, to place four retards on south bank of the Yuba River above the retards placed in 1928 at the Dantoni Orchard and below the lower end of the gold dredging tailing piles, about 8 miles above the town of Marysville. Specifications obtainable from above.

IRRIGATION PROJECTS

CALIFORNIA.—Following permits were granted during the month of August by the State Department of Public Works, Division of Water Rights, to appropriate water: Permit 3537, Application 6002 (Siskiyou County) Issued to Montague Water Conservation District, Montague, for 50 cubic feet per second from Inconstance Creek, for irrigation purposes on 19,500 acres Est. cost \$290,000.

Per. 3538, App. 6103 (Alameda Co.) J. Cassou, Oakland, for 0.37 cubic foot per second from San Lorenzo Creek,

for irrigation and domestic purposes on 60 acres. Est. cost, \$2000.

Per. 3539, App. 6173 (Alameda Co.) C. A. Crate, Hayward, for 0.15 cubic foot per second from San Lorenzo creek, for irrigation on 12.39 acres. Est. cost \$750.

Per. 3540, App. 6618 (San Bernardino Co.) Los Angeles Council of Camp Fire Girls, Los Angeles, for 0.031 cubic foot per second from Santa Ana River, for recreational purposes. Est. cost \$1000.

Per. 3541, App. 6531 (Humboldt Co.) E. L. Wright, Weitchpec, Calif., for 2 cubic feet per second from Cindar cost \$1500.

Cap Creek, for power purposes. Est.

Per. 3542, App. 6609 (Del Norte Co.) G. C. Walton, Crescent City, for 0.044 cubic foot per second from Rock Creek, for irrigation and domestic purposes on 1½ acres. Est. cost \$200.

Per. 3543, App. 6610 (San Bernardino Co.) A. W. Bercau, Los Angeles, for 0.25 cubic foot per second from 5 unnamed springs, for irrigation and domestic purposes 50 acres. Est. cost \$1500.

Per. 3544, App. 6046 (Tehama Co.) May Bouman, Cottonwood, Calif., for 0.55 cubic foot per second from South Fork of Cottonwood Creek, for irrigation on 45 acres.

Per. 3545, App. 3269 (Inyo Co.) Ballarat Mining Corporation, Ballarat, Calif., for 3.00 cubic feet per second from North Branch Surprise Canyon, for mining purposes. Est. cost \$15,000.

Per. 3546, App. 6523 (Mono Co.) Newton M. Otis, Santa Monica, Calif., for 0.01 cubic foot per second from unnamed stream, for domestic purposes. Est. cost \$75.

Per. 3547, App. 6537 (Mono Co.) U. S. Inyo National Forest, Bishop, for 0.01 cubic foot per second from unnamed creek, for domestic purposes. Est. cost \$152.

Per. 3548, App. 6538 (Mono Co.) U. S. Inyo National Forest, Bishop, for 0.013 cubic foot per second from Mammoth Creek and Owens River, for domestic purposes. Est. cost \$460.

Per. 3549, App. 6727 (Madera Co.) U. S. Yosemite National Park, Yosemite National Park, for 2.00 cubic feet per second from Raynor Creek, for recreational purposes, fire protection and domestic. Est. cost \$30,190.

Per. 3550, App. 6662 (Riverside Co.) Lucile Mann Morris, Keen Camp, Calif., for 0.2 cubic foot per second from a spring for irrigation purposes. Est. cost \$1160.

Per. 3551, App. 6513 (Trinity Co.) Trinity Farm and Cattle Company, Redding, for 15 cubic feet per second from Trinity River for irrigation and domestic purposes on 323 acres. Est. cost \$1500.

Per. 3552, App. 6298 (Orange Co.) Walter C. Aston, Los Angeles, for 1 cubic foot per second from Falls Creek for mining purposes. Est. cost \$2400.

Per. 3553, App. 6303 (Orange Co.) Walter C. Aston, Los Angeles, for 3 cubic feet per second from Trabucco Creek and Holy Jim Creek for mining purposes. Est. cost \$3000.

CALIFORNIA — Following applications were filed during the month of August with the State Department of Public Works, Division of Water Rights, for permits to appropriate water:

Application 6757 (Shasta County) Robert W. Clothier, Cottonwood, Calif., for 3 c.f.s. from Cottonwood Creek, tributary to Sacramento River for irrigation purposes (400 acres). Est. cost \$100.

App. 6758 (Sacramento Co.) A. L. White, Box 300, Rt. 3, Sacramento,

for 1.0 c.f.s., from Sacramento River, tributary to Suisun Bay, for irrigation purposes (80 acres) Est. cost \$2000.

App. 6759 (Mono Co.) Alloy Age Products Co., Ltd., c/o Frank A. Backman, 907 Consolidated Bldg., Los Angeles, for 3.00 c.f.s. from Laurel Lakes, tributary to Laurel Creek; thence Hot Creek, thence Owens River, for power purposes (122.7 h.p.). Est. cost \$1200.

App. 6760 (Colusa Co.) M. E. Hastings, Box 18, Maxwell, Calif., for 1.0 c.f.s., from Stone Corral Creek, tributary to Sacramento River, for irrigation purposes (81 acres).

App. 6761 (El Dorado Co.) John M. Ochsner, 627 22nd Street, Sacramento, for 0.0003 c.f.s., from unnamed spring, tributary to So. Fk. American River, for domestic purposes. Est. cost \$60.

App. 6762 (Mariposa Co.) John J. Fiske, Coulterville, Calif., for 0.011 c.f.s., from unnamed spring, tributary to Dutch Creek watershed, thence Bean Creek, thence Smith Creek, thence N. Fork Merced River, for irrigation and domestic purposes (4 acres). Est. cost \$100.

App. 6763 (Trinity Co.) C. M. Salver, c/o C. A. Paulsen, Weaver, Calif., for 10 c.f.s., from Clark Creek, tributary to Eltapom Creek, thence S. Fork Trinity River, for mining and domestic purposes. Est. cost \$15,000.

App. 6764 (Calaveras Co.) State of California, Dept. of Public Works, Div. of Highways, Div. V, for 0.015 c.f.s., from unnamed spring, tributary to North Fork of Stanislaus River, for domestic purposes. Est. cost \$800.

App. 6765 (El Dorado Co.) J. R. Taylor, H. Derr & Geo. Horstmyer, 3101 T Street, Sacramento, for 600 g.p.d., from unnamed stream, tributary to South Fork of American River, for domestic purposes. Est. cost \$150.

App. 6766 (Humboldt Co.) E. F. Barker and Beatrice B. Barker, Orleans, Calif., for 1 c.f.s. and 1 ac. ft. per annum, from unnamed springs for irrigation and domestic (10 acres). Est. cost \$95.

App. 6767 (San Joaquin Co.) E. A. Hahn c/o Chas. E. Widows, C. E. 327 E. Channel St., Stockton, 0.55 c.f.s., from French Camp Slough, tributary to San Joaquin River, for irrigation purposes (75.4 acres). Est. cost \$3600.

App. 6768 (Los Angeles Co.) Irving A. Swanson, 516 So. Electric Street, Alhambra, Calif., for 0.125 c.f.s., from Violin Canyon, tributary to Castaic River, for domestic purposes.

App. 6769 (Modoc Co.) Jake Recheister, Cedarville, Calif., for 1.10 c.f.s. from Cedar Creek, tributary to Middle Alkali Lake, for irrigation purposes (55 acres). Est. cost \$50.

App. 6770 (Fresno Co.) City of Fresno, c/o L. Rowe, City Att'y, Pacific Southwest Bldg., Fresno, for 500 c.f.s., from San Joaquin River, tributary to Suisun Bay, for power purposes. Est. cost \$1,000,000.

App. 6771 (Fresno Co.) for 25,000 ac. ft. per annum, from San Joaquin River, tributary to Suisun Bay, for irrigation purposes (8,500 acres).

App. 6772 (Fresno Co.) City of Fresno, for 150,000 ac. ft. per annum, for San Joaquin River, tributary to Suisun Bay, for municipal purposes.

App. 6773 (Mono Co.) Alice F. Hunewell, Bridgeport, Calif., for 1440 g.p.d., from unnamed stream, tributary to Robinson Creek, for domestic purposes. Est. cost \$150.

App. 6774 (Mono Co.) R. D. Owen, c/o Fred R. Smith, Att'y, Bishop, Calif., for 12 c.f.s., from Arrowhead Lake, tributary to Lake Mary, and thence down Mammoth Creek to

Owens River, for power purposes (818.2 h.p.). Est. cost \$50,000.

App. 6775 (Trinity Co.) Louis A. Maire, Burat Ranch, Trinity Co., Calif., for 3 c.f.s., from unnamed stream, tributary to New River, for mining and domestic purposes. Est. cost \$2000.

App. 6776 (Nevada Co.) Blue Lead Consolidated Mining Co., c/o Harry B. Gray, Supt., N. Bloomfield, Calif., for 2 c.f.s., from Logan Canyon, tributary to South Fork of Yuba River, for mining purposes. Est. cost \$500.

App. 6777 (Sierra Co.) Frank M. Phillips, Walter Olson and A. E. Lisbon, for 0.5 c.f.s., from unnamed spring, tributary to Woodruff Creek, thence Oregon Creek, thence Middle Fork Yuba River, for mining and domestic purposes. Est. cost \$500.

App. 6778 (San Bernardino Co.) William Theodore Elliot, Summit, San Bernardino Co., Calif., for 0.062 c.f.s. and 6 ac. per annum, from Little Horsethief Canyon, tributary to Mojave River, for irrigation and domestic purposes (5 acres).

App. 6779 (San Diego Co.) Talmage Lowe, c/o Philip Storer Thatcher, Att'y, El Cajon, Calif., for 3 c.f.s., from 6 springs, tributary to Carrizo Creek, for irrigation purposes (120 acres). Est. cost \$6000.

App. 6780 (Sierra Co.) R. H. Kingdon, La Porte, Plumas Co., Calif., for (1) 25 c.f.s. and (2) 25 c.f.s. from (1) Lover's Ravine and (2) Bald Mountain Ravine, tributary to Slate Creek and North Fork Yuba River, for mining purposes.

App. 6781 (El Dorado) H. L. Fowler, Georgetown, El Dorado, Co., Calif., for 12 c.f.s., from Pilot Creek, tributary to Rubicon Creek, for irrigation purposes (200 acres).

App. 6782 (Mono Co.) Emma Grace Parker, c/o Judge Pat. R. Parker, Bridgeport, Calif., for 10 c.f.s., from unnamed stream, tributary to Twin Lakes, Robinson Creek, for irrigation purposes (4 acres).

App. 6783 (Siskiyou Co.) C. H. McKendree, of Lakeview, Oregon, for 30,000 ac. ft. per annum, from North, South and Middle Forks of Sacramento River, for irrigation purposes.

App. 6784 (Plumas Co.) Mount Lassen Area Council, Boy Scouts of America, for 0.2 c.f.s., from Yellow Creek, tributary to Feather River, for recreational purposes. Est. cost \$2000.

EL NIDO, Merced Co., Cal.—A. Blakesley, care Merced Irrigation District, Merced, is completing plans for the construction of canals, etc., for the El Nido Irrigation district. Work involves:

(1) 12 miles of main canal, involving 150,000 cu. yds. canal excav., 65,000 sq. ft. 2-in. concrete lining;

(2) 15 miles of lateral canals, involving 120,000 cu. yds. canal excavation;

(3) construction of 24-in. to 48-in. siphons with headwalls, bridges, drops, stop-gates and side-gates, etc. A bond issue of \$135,000 will probably be voted at a later date.

FRESNO, Fresno Co., Cal.—Application has been filed by Fresno Irrigation District, J. Allen Hall, secretary, Griffith-McKenzie Bldg., Fresno, Fresno County, for the appropriation of 750 cu. ft. per second from San Joaquin River in Fresno and Madera counties and 200,000 ac. ft. per annum storage for irrigation of 241,300 acres of land, and 3600 cu. ft. per second for power development. Work will involve: power plant, to develop 75,000 h.p.; diversion dam, to be concrete, 120 ft. high and 1470 ft. long; storage

dam, concrete to be 247 ft. high and 3400 ft. long and located at Plamt. Geo. L. Swendsen, Griffith-McKenzie Bldg., Fresno, is the chief engineer.

STREET LIGHTING SYSTEMS

WOODLAND, Yolo Co., Cal.—Proceedings have been started by city trustees to install ornamental street lighting system, involving an expenditure of \$125,000. Streets in the district are: Third from Beamer to Woodland Ave.; West Keystone Ave. from Second to Third; Second from Beamer to West Keystone; East Keystone from Third to Fourth; Fourth from East Keystone to Beamer; First from Main to Beamer; Third from Main to Marshall; Second from Main to Bartlett; College from Main to Beamer; First from Main to Hayes; Second from Main to Beamer; Third from Main to Beamer.

FORTUNA, Humboldt Co., Cal.—Business Men's Association proposes installation of a modern lighting system in Main street.

RENO CITY COUNCIL TO BAN UNSAFE BUILDINGS

A prospective city ordinance condemning all buildings within the city limits, regarded by the fire chief, the city engineer and the city health officer, as either a danger to property, life or health, are unfit for human habitation, or are a fire menace, has been given first reading by the Reno, Nevada, city council.

The ordinance provides that the fire chief, health officer and engineer are

empowered to investigate any structures and if necessary to condemn them to be removed or destroyed. The owner is given the right to appeal to the council for judgment. Failure to observe the condemnation will subject owners of the property to a fine of not more than \$500 for maintenance of a public nuisance.

In a recent article in the Outlook and Independent, William O. Scroggs points out that, while mergers and combinations in industry are more common than ever before, the old cry of "trust" is rarely heard. The exception to this is in political circles, where periodic attempts are made to secure votes by condemning business practices in some form or other.

Mr. Scroggs gives four causes for this changed viewpoint on the part of the public. The first is that modern big business, instead of crushing small competitors by use of its power, now invites them into the family.

Second, the anti-trust laws protect the public against unfair consolidations.

Third, and perhaps most important, millions of Americans in all walks of life, now own an interest in our leading concerns.

Fourth, the public has learned that a better product can be produced and sold at a lower price through quantity production.

Nowadays, instead of blindly prohibiting the so-called "trusts," we regulate them in the public interest. Every unbiased person knows that modern business methods have made America the world's preeminent industrial nation. They have been responsible for our high wages and living standards, the thousand and one comforts and luxuries that have been placed within the reach of all. It is no wonder that American intelligence has seen through the "trust" bogey.

A "Pittsburg" Automatic Water Heater installed in the Home indicates high quality throughout.

Recommended and specified by all the leading architects, plumbers and builders.

Consider the high merit of the Pittsburg coupled with "Pittsburg Perfect Service."

"Hot water quick as a wink."

Pittsburg Water Heater Co.

Makers of "Pittsburg Automatic"—"Bungalow Automatic" Storage Systems and "Lyon" Tank Water Heaters.

N. Y. Engineers Carry Multi-Dwelling Dispute To U. S. Supreme Court

The structural engineers of New York have asked the supreme court of the United States to pass on the validity of the New York multiple dwellings law which requires that plans for such buildings be filed by a "registered architect." The engineers claim this provision is an unjust and unlawful restriction of their profession. The case was carried to the highest court on a writ of certiorari in the matter of Oscar Goldschlag, No. 410.

The case, according to the petition, arises from a petition for a writ of mandamus to compel William F. Deegan, as tenement house commissioner of the city of New York, to receive for filing certain tenement house plans prepared by the petitioner, a professional engineer, licensed to practice in the state of New York.

By virtue of Section 120 of the law, it is explained, no tenement house shall be erected until there has first been submitted to the tenement house department by the owner of his agent, a copy of the plans for the proposed building.

The petitioner alleges that he drew plans for the owner of certain property and they were refused for filing on the avowed ground that he was neither the owner of the premises, nor a registered architect acting as agent for the owner, as required by the statute.

It is contended that Section 300 of the act, requiring "a registered architect," is unconstitutional in that it is an arbitrary classification, "unjustly circumscribing, limiting, and destroying the powers and privileges inherent to the practice of the petitioner's profession of a professional engineer and with no public evil to be remedied, and with no logical public purpose to be served."

The writ of mandamus was denied and the validity of the law sustained by the supreme court of New York.

CEMENT PRODUCTION DECLINES IN AUGUST

American Portland cement mills show a decline in the ratio of operations to capacity as indicated by the figures for the 12 months period ending August 31. According to statistics released by the Bureau of Mines of the Department of Commerce, the ratio of operations to capacity for the last 12 months was 65.6 per cent. The ratio percentage for the 12 months ending July 31, 1930, was 66.1, and for the 12 months ending August 31, 1929, was 68.2 per cent.

During the month 17,821,000 barrels were produced, 20,299,000 barrels were shipped, and stocks on hand at the end of the month were 23,810,000. Production in August, 1930, was 4.1 per cent less and shipments 11.9 per cent less than August, 1929. Stocks at the mills were 18.7 per cent more than a year ago.

PRICE CUTTING

By Herbert N. Casson in the Standard Oil Bulletin.

The price-cutter is worse than a criminal. He is a fool. He not only pulls down the standing of his goods; he not only pulls down his competitors; he pulls down himself and his whole trade. He scuttles the ship in which he himself is afloat.

Nothing is to easy as to cut prices, and nothing is so hard as to get them back when once they have been pulled down. Any child can throw a glass of water on the floor, but all the wisest scientists in the world can't pick that water up.

Who gets the benefit of price-cutting? Nobody. The man who sells makes no net profit, and the man who buys soon finds himself getting an inferior article. No manufacturer can permanently keep up the standard of his goods if the price is persistently cut. Pretty soon he is compelled to use cheaper materials, and to cut down the wages of his workers.

The man who cuts prices puts up the sign: "This way to the junk-heap!" He admits his own failure as a salesman. He admits he has been defeated according to the Marquis of Queensbury rules of business. He admits he can not win by fighting fair. He brands himself a hitter-below-the-belt. If the business world were dominated by price-cutters, there would be no business at all. Price-cutting, in fact, is not business any more than smallpox is health.

Whenever you see this sign on a price-cutter's store—"Going Out of Business"—you may be sure it is a lie. How can he go out of business when he never was in?

PRESCOTT ESTATE VALUATION SET AT \$111,286.48

A valuation of \$111,286.48 has been placed on the estate of the late F. K. Prescott, pioneer business man of Fresno, in a report filed with the county clerk at Fresno. Shares in the Prescott Brick & Lumber Co., amounting to \$64,545, constitute the bulk of the estate. The value of real estate inventoried is \$20,500.

CHICO CONTRACTORS PROTEST LICENSE FEE

Protesting the \$25 contractors' license fee, ten contractors of Chico have appointed a committee to interview city councilmen with a view to having the legislation abandoned. Contractors protesting the license fee are: J. M. Evans and son, Merrick M. Evans, W. J. Shalz, Joseph Brown, Joseph Striegall, L. O. Windsor, Noah James, H. T. Brooks, J. H. Orendorff and R. A. McKinney.

San Jose Contractor Vanishes, Leaving "Subs" Holding \$11,890 Sack

While a group of sub-contractors and material dealers were meeting in San Jose to formulate plans by which they hope to secure money due them on construction of two homes, George Moody, deputy state labor commissioner at San Jose, was taking steps to bring about the return of Thomas Carpenter, building contractor.

Carpenter, according to complaints made to Moody, vanished, leaving the sub-contractors without reimbursement for their labor, and material men without payment for their materials. Carpenter's total indebtedness for labor and materials to date, it is said, amounts to \$11,890.

Among those to whom the largest amounts are owing, according to report, are L. C. Clouse, plastering contractor; the Tilden Lumber Company; Borchers Brothers; W. F. Cooper, carpenter contractor, and several others.

Clouse, as have the other contractors, it is said, has paid his employees out of his own pocket, his loss, unless reimbursed later, being in the neighborhood of \$1000.

Carpenter, said to have come here about six months ago, built a large house at the corner of Lincoln and Fairview Avenues, paying for everything in full. Later he is said to have secured the two adjoining lots on a very small down payment, borrowed sufficient money for building a house on each from a Palo Alto building and loan company, and then sub-let all of the contracts for construction.

Because of state laws and the special circumstances of the case the sub-contractors are said to have practically no redress, their liens upon the property coming after the first mortgage given to the building and loan company and the second mortgage given to the owner of the land.

ALAMEDA COUNTY TO LIMIT PAVING APPROPRIATIONS

The Alameda county supervisors have laid down an ultimatum to the city of Oakland that in no future case will it pay more than 20 per cent of any street paving job within the city limits, and it will make no appropriations at all unless detailed cost figures are filed with the supervisors with the requests for aid.

The action of the board came when requests filed by City Engineer Walter N. Frickestad for appropriations totaling \$263,250 came up for consideration.

RATES ON GYPSUM ARE HELD UNREASONABLE

That rates on shipment of gypsum by carload lots between Arden, Nev., and Monolith, Calif., are unreasonable is the report of examiners made recently to the Interstate Commerce Commission. A "reasonable basis of rates" is recommended.

ENGINEER ANSWERS QUESTIONS TO AID BUILDING INSPECTORS ON WELDED STEEL STRUCTURES

By Frank P. McKibben, Consulting Engineer, General Electric Company

As the number of electric arc welded steel buildings increases, and as the size and height of these structures become greater, municipal Building Commissioners and Chief Building Inspectors will find at the beginning of each inspector's career, a need for the latter's instruction in the elementary and fundamental features of arc welding as applied to ordinary steel building construction. As an aid in this process the following direct questions and answers have been prepared by Mr. McKibben after consultation with several welders, welding engineers, contractors and building commissioners, and after having had experience in the design and construction of a number of welded structures varying from one to eighteen stories in height. To the experienced engineers these questions and some of the answers will appear of a very elementary nature, but it must be remembered that to the man who has not been in contact with welding, nor has been thinking in electrical terms, they give ample food for thought; simple though they are.

Question 1—What is electrical arc welding?

Answer—Welding in which two pieces of steel are melted together by the electric arc.

Question 2—What is the proper procedure for the contractor for erection of steel to follow in starting, for instance, a ten-story building?

Answer—The first tier of steel, after being erected, should be plumbed true to lines and levels, and all connections should be securely bolted or clamped, before starting any welding. Each tier thereafter should be treated in the same manner.

Question 3—What is an electrode or welding wire used in electric arc welding of steel building frames?

Answer—The electrode or welding wire is a short length of specially prepared steel wire about 12 to 18 inches long, and from $\frac{1}{8}$ to $\frac{3}{16}$ inch in diameter, which is clamped in the electrode holder held in the hand of the operator and forms one terminal of the electric circuit. This wire is practically the same grade of steel as the steel parts to be welded.

Question 4—How important is the electrode?

Answer—Of the utmost importance. Care should be taken to use only the make and type specified.

Question 5—What are the base or parent metals?

Answer—The materials to be welded.

Question 6—What should be the condition of the base metals at the time of welding?

Answer—Clean and free from rust, dirt, grease, paint or other foreign substances, except for a thin coating of linseed oil if the engineer has specified its use.

Question 7—How does the operator form the electric arc which melts the base metals together?

Answer—(a) One wire cable (lead) from the electric welding machine is fastened to the electrode

holder held in the hand of the operator, while the other wire from the machine is attached to any part of the steel pieces to be welded;

(b) The end of the welding wire is touched to the steel parts, where the weld is to be made, and current flows;

(c) The wire is then withdrawn about $\frac{1}{8}$ or $\frac{1}{4}$ inch away and the electric arc is formed.

Question 8—Which welding lead, positive or negative, is ordinarily connected to the electrode holder when welding structural steel?

Answer—The negative.

Question 9—Does the electrode or welding wire last a long or a short time?

Answer—It lasts only a short time, because the heat of the arc melts it and it must be renewed when used down to two or three inches in length.

Question 10—What type of welding current, alternating or direct, is ordinarily supplied to the welding operator for use in structural steel welding?

Answer—Direct current is almost exclusively used for arc welding structural steel.

Question 11—What diameters of electrodes are ordinarily used in structural steel welding?

Answer—At present $5/32"$ or $3/16"$ diameters are generally used.

Question 12—What precautions must be taken by the operator, while welding, or the inspector of welding while watching the welding process?

Answer—The arc should not be looked at without covering the face and neck with a helmet; in which is a darkened glass for protecting the eyes against the arc. The welder should also wear gloves to protect his hands.

Question 13—Which is preferable—a short arc or a long arc?

Answer—A short arc because it makes a purer weld, gives better fusion and penetration, and causes less spattering of the molten metal.

Question 14—What are the names of the two small dials or gauges found on most welding machines?

Answer—One is the voltmeter. The other is the ammeter.

Question 15—What does the voltmeter on the electric welding machine indicate?

Answer—The voltmeter indicates the voltage, that is, shows the number of volts, or electrical pressure; somewhat as a water pressure gauge shows the water pressure in a pipe line.

Question 16—What does the ammeter on the electric welding machine indicate?

Answer—The ammeter indicates the amperage, that is, shows the number of amperes, or quantity of electric current flowing; somewhat as a water meter records the quantity or amount of water flowing through a pipe.

Question 17—Does the needle on the voltmeter record the same amount all the time?

Answer—No. When the welding operator is welding, the needle on the voltmeter records a small

number of volts. When he is not welding and the machine is running idle the needle records a larger number of volts.

Question 18—Does the needle on the ammeter record the same amount all the time?

Answer—No. When the welding operator is welding, the needle on the ammeter records a large number of amperes. When he is not welding and the machine is running idle the needle stands at zero.

Question 19—Is there any way by which the welding operator can regulate the amount of current, that is, change the amperage, in order to get more or less current as required for welds of varying sizes?

Answer—Yes. On each machine is a small crank, or similar device, which can be turned in such a way as to furnish more or less current, and therefore more or less heat, to the welder.

Question 20—Does a welding operator in welding thick steel require more current, that is, more amperes, that is, more heat, than when he is welding thin steel?

Answer—Yes. The thicker the steel parts to be welded, the greater is the amount of heat required, and the current must be greater than when welding thin steels. The thicker the steel, the greater should be the amperage.

Question 21—How would you identify each welder's work if several were working on one job at the same time?

Answer—Require each man to use a die or stencil for marking the steel at each weld he makes.

Question 22—Name the two kinds of welded joints that are sometimes used to test welding operators to find out whether they can do good welding?

Answer—(a) Butt welds, and (b) Fillet welds.

Question 23—How is a butt welded joint made?

Answer—For thin plates, say $\frac{1}{4}$ inch thick or less, by placing the edges of the plates almost but not quite together and melting them together by the arc. For thicker plates, before applying the arc, the edges to be welded should be beveled.

Question 24—How is a fillet weld made?

Answer—Fillet welds are used where one plate to be welded is lapped over the other, and the two joined together by depositing with the arc a mass of metal against the edge of one plate and against the side of the other, forming a fillet.

Question 25—If a fillet were sawed across so as to show its cross section what would be the shape of this cross section and about how large?

Answer—The cross section of a fillet is generally a triangle. The base of the triangle is ordinarily equal to its height and is about $\frac{1}{4}$ or $\frac{3}{8}$ or $\frac{1}{2}$ or $\frac{3}{4}$ inch.

Question 26—How would you describe the size of a fillet which has a triangular cross section with base and height of the triangle each

$\frac{3}{8}$ inch and the fillet extends 6 inches along the edge of the steel plate?

Answer—This would be a $\frac{3}{8}$ inch fillet, 6 inches long.

Question 27—In welding steel building frames, made up of beams, columns, and other similar structural shapes, what kind of welds are mostly used?

Answer—Triangular fillet welds are nearly always used and are generally of $\frac{3}{8}$ inch size; although they may be specified by the engineer as small as $\frac{1}{4}$ inch and as large as $\frac{5}{8}$ inch or sometimes even $\frac{3}{4}$ inch.

Question 28—For carrying ordinary floor loads in buildings what is the safe load in shear allowed by building codes for a triangular fillet weld $\frac{3}{8}$ inch size and 1 inch long; $\frac{1}{2}$ inch size and 1 inch long; $\frac{5}{8}$ inch size and 1 inch long?

Answer—For $\frac{3}{8}$ inch fillet 1 inch long 3000 lbs.

For $\frac{1}{2}$ inch fillet 1 inch long, 4000 lbs.

For $\frac{5}{8}$ inch fillet 1 inch long, 5000 lbs.

Question 29—Is a fillet of good smooth appearance free from small gas holes, better than one with a very rough surface, and badly pitted with gas holes?

Answer—Yes, smoothness of surface and freedom from gas holes indicate better workmanship and stronger welds.

Question 30—What precautions should be taken to insure good welds?

Answer—(a) Employ only welders who have satisfactorily passed qualification tests to show their skill in welding.

(b) From time to time during progress of the work, in order to maintain a high standard, require each welder to make additional tests.

(c) See that the welding wire conforms to the requirements of the specifications and shows good welding qualities.

(d) Inspect the welds while being made to see that the operator is holding a short, steady arc and using the proper amount of current.

(e) Examine the finished welds and accept only those having a smooth appearance free from gas holes or porous places; see that the crater shows that the weld has properly penetrated the base metals; see that the edges of the deposited metal are sharp and indicate good penetration into the base metals.

Question 31—About what current should be recorded on an ammeter of a welding machine when the welding operator is depositing a $\frac{3}{8}$ inch fillet? For depositing a $\frac{1}{4}$ inch fillet?

Answer—For depositing a $\frac{3}{8}$ inch triangular fillet a current of from 175 to 200 amperes should be indicated on the ammeter. For $\frac{1}{4}$ inch fillet, a current of from 150 to 160 amperes should be indicated.

Question 32—Approximately what amount of current should be used with $\frac{5}{32}$ inch diameter electrodes? With $\frac{3}{16}$ inch diameter electrodes?

Answer—This depends somewhat on the thickness of steel to be welded but generally 150-200 amperes for $\frac{5}{32}$ inch diameter electrodes and 175-225 amperes for $\frac{3}{16}$ inch diameter electrodes.

Question 33—How should a condemned weld be removed in order to permit the joint to be rewelded?

Answer—The weld metal should be cut out either with a compressed air tool or by hand.

Question 34—Are some kinds of steel floor joists welded?

Answer—Yes. Some are made in factories by welding steel parts together.

Question 35—By what methods are welded steel floor joists connected to the steel floor beams which support them in the building?

Answer—Where welded steel floor joists are used, they are connected to the steel floor beams by bolts, clamps or small fillet welds.

ACOUSTIC TALK IS MADE ABROAD BY U.C.L.A. PROFESSOR

Dr. Vern O. Knudsen, associate professor of physics of the University of California at Los Angeles, recognized as one of America's leading authorities on acoustics, delivered a paper on the subject of "Architectural Acoustics" before the Twelfth International Congress of Architects, meeting at Budapest, Hungary, Sept. 15. His paper contained a general survey of and summary of architectural acoustics at the present time in the United States and America.

In his paper he stated that at least six laboratories in the United States are now testing absorption, insulation, speech articulation and other problems in architectural acoustics, and that frequently professional consultants on acoustics are retained by architects or owners to work with architects during the entire design and construction of a building. The fees for this work range from \$100 to \$1000, he said. Manufacturers often provide acoustical surveys and engineering service gratis, and many large firms contract acoustical treatment under guarantee.

During the course of his paper he took occasion to refer to the B'Nai B'Rith Temple in Los Angeles and the Hollywood Bowl as examples of acoustics.

"It is quite usual to plan acoustics in advance of construction," he said. "The B'Nai B'Rith Temple, Los Angeles, a large, difficult room with a volume of about one million cubic feet, was treated with acoustical plaster, carpeted floors and upholstered seats, and has excellent acoustics for both speech and music. The reverberation time is 1.65 seconds with a capacity audience. Hundreds of theatres, churches and school auditoriums could be cited as other successful examples. Nearly all large public buildings are now designed to have good acoustics.

"Speech tests in three large auditoriums, before and after acoustical correction, showed an average improvement in articulation of from 55 to 79 per cent. Similar improvements have been obtained in hundreds of other rooms."

In speaking of theatres he said upholstered seats were commonly used in acoustical correction, but that some accommodations were provided by different stage drops.

"Reflections delayed as long as 40 feet or more, especially from curved surfaces, are detrimental," he continued. "Echoes from a rear wall in one auditorium and from a domed ceiling in another mar the acoustics in rooms which otherwise have ideal reverberation.

"Speech, articulation falls off to 75 per cent in a quiet, open space at about 125 feet in front of, 100 feet to the side of, and 75 feet behind the speaker. The presence of a slight wind, or slight audience noise, greatly reduces these limits. At

Hollywood Bowl, loud speech can be heard distinctly at a distance of 300 feet, music at 550 feet, but dramatic dialogue only about 125 feet."

Conditions Improving Says Business Analyst

Colonel Leonard P. Ayres of the Cleveland Trust Company, one of the most widely known of American economists, and a banker whose former business forecasts have been borne out by the developments, has recently issued the following statement:

When we can look back at this depression, and examine it in fair perspective, we shall in all probability see that the lowest point and slowest pace of business activity came in July of this year. Commerce and industry always slow down in summer, but in July activity was abnormally low even for a summer season in an exceptionally bad year. A large part of the automobile industry was closed for inventory taking, and for the new machinery plantatory to getting out improved models. Activity in the steel industry declined to the lowest pitch since the summer of 1921. The aggregate of all manufacturing output was relatively small, and the movement of railroad freight fell to new low levels.

Now the automobile plants are resuming production, steel output is increasing, miscellaneous manufacturing is enlarging its outputs, and the railroads are beginning to receive the greater tonnage of shipments that always come in the second half of the year. It is already clear that the statistics of business will make a better showing in August than they did in July, and a better one in September than in August. In all probability a gradual improvement is beginning that will carry on through the remaining months of the year. Business is low, but it is looking up."

INSULMESH IS NEW PRODUCT OF GENFIRE

The newest of a long series of contributions to the building field, an insulating paper-backed plaster base is announced by the Genfire Steel Company of Youngstown, Ohio.

The new product, known as Insulmesh, is composed of wide mesh expanded metal with a backing of corrugated paper board which has been chemically treated to render it non-inflammable. It combines the rigidity and fire-resistance of metal lath with insulating qualities afforded by dead air cells.

Insulmesh is furnished in sheets of 27"x48" and is very easily handled and erected. The smooth surface of the expanded metal makes for easy plastering and the mesh becomes completely embedded. Economies in the plaster are made possible because the paper backing prevents any wastage and the corrugations, while saving plaster, also form ribs which add to the rigidity of the finished wall.

Insulmesh provides finished walls and ceilings which are rigid, fire-safe and soundproof, at a cost comparable with that of a job plastered over wood lath. It may be used as an interior or exterior plaster base.

ENTERS INSURANCE FIELD

A. L. Porter, for many years secretary of the Western Retail Lumbermen's Association at Seattle, has quit the lumber business and is now selling life insurance for the Pacific Mutual at Los Angeles.

THE OBSERVER

What He Hears and Sees on His Rounds

Misinformation is the weapon upon which opponents of the Golden Gate bridge are placing their entire reliance for the defeat of the \$35,000,000 bond issue November 4.

This is the statement of Alan MacDonald, general manager of the Golden Gate Bridge and Highway District, who is taking a leading part in the bridge bond campaign.

MacDonald enumerated garbled statements that are being circulated by word of mouth. Here are two outstanding ones, together with the general manager's answers:

"The cables will never support the bridge and it will fall into the water, blocking the Golden Gate."

"This is ridiculous on its face. The United States government, in granting the permit for construction, definitely answered this question."

"The Golden Gate bridge will not pay, and will increase the burden of the taxpayers of the district."

"Here is the old bugaboo, reared to terrify the timid taxpayer. As a matter of fact, the directors of the district, with the aid of the most competent traffic experts, have proven, beyond a doubt that the bridge will not only pay off its principal, interest and upkeep over a forty-year period, but will accumulate a reserve of more than half the total bond issue of \$35,000,000."

Announcement last month that the new \$20,000,000 New England building in Boston would be topped with an aluminum dome and that this metal would be used extensively to obtain special decorative effect again calls attention to the rapid progress being made in its introduction for building purposes, says Construction Methods. On the 85-story Empire State Building in New York City, to be the highest in the world, aluminum spandrels were specified, involving a large tonnage of light alloy. Recently the possibility of using aluminum or duralumin structural in the upper stories of sky-scrapers was discussed as a means of lightening the supported load throughout the structure.

Engineering construction contracts were awarded in August at the rate of 60 million dollars per week, compared with 53 millions in July and 70 millions in August, 1929, says Engineering News-Record. Public works accounted for 48.4 per cent of the total, compared with 37.8 a year ago. The average for the 35 weeks of 1930 is 12.4, compared with 11.5 in that period of 1929 and 10.35 for the whole of that year.

Streets and roads averaged 12.3 millions, compared with 14.6 in July and 16.5 millions in August, 1929. Other classes ahead of last August are sewers, excavation, and unclassified structures, both private and public. All sections of the country, except the Middle Atlantic and Far Western states, record a larger volume than a month ago.

For the eight months only New England is ahead of last year. The total drop is 19 per cent. Private construction is down 30 per cent; public up 5 per cent.

What are local chambers of commerce doing to adjust their activities and policies in the matter of bringing industries into their communities to the changed points of view of those industries under present business conditions? What new developments have chambers of commerce worked out to meet the constantly changing demands of industries? Just how are location experts making readjustments to meet new times in industry?

H. Findlay French, director of the Industrial Bureau of Baltimore, Maryland, will answer these questions and will outline new activities of chambers of commerce which are proving successful in acquiring industries for their communities when he speaks before the Industrial Property Division of the National Association of Real Estate Boards at the Division's Industrial Conference, to be held in Detroit, Michigan, October 27 and 28. French has as his subject "Recent Developments in Chambers of Commerce With Respect to Location of Industries."

The meeting will bring together representatives of large industries interested in the location problem, location experts from chambers of commerce and industrial bureaus engaged in drawing new industries to cities, heads of the industrial departments of railroads and realtors who are specialists in fitting industries into the most advantageous locations.

On a field trip scheduled for the second day of the conference, industrial areas of Detroit will be studied by the group attending the meeting.

Portland (Oregon) Chapter of the Associated General Contractors of America, has launched a movement to secure accurate data on the type of buildings most needed in Portland. The data is to serve as a guide to investors, helping them to realize more on their investments by wisely spending money for buildings of a type which are really needed rather than structures of a variety which may be overbuilt.

The Fresno City Council is considering the proposal of J. Harold McDowell, architect of New York City, to finance construction of a new civic auditorium without cost to the city in taxes or added bonded indebtedness. Tentative offers bring out the fact that Architect McDowell represents a New York firm which will finance construction of the new auditorium under a first mortgage plan. The auditorium would not cost the city anything for the first two years, and after that time, according to the architect, the auditorium may be so operated that it will pay for itself from its own earnings. The cost would be amortized in a period of about twenty years. The proposal will be given further consideration by the city council with the arrival of a representative of the New York firm proposing to finance the structure.

The State Department of Public Works announces that approximately \$63,259,000 will be available for improvement of highways in the com-

ing biennium. This is an increase of \$3,259,000 over the income in the present biennium budget.

The state's share of the 3-cent gasoline tax is estimated at \$46,400,000 for the coming biennium and approximately \$8,337,000 is expected from the federal aid allotment for highway construction. The remainder will come from motor vehicle taxes.

A large share of the income will be apportioned to counties for road improvement and will not be available for improvement of the state highway system. The department's budget is to be submitted to Governor Young the latter part of November.

Industrial building costs are the lowest in eight years, according to a survey of The Austin Co., engineers and builders. Except for a period in 1922 costs have not been so low since 1916. All of the decline is due largely to falling prices of materials and greater efficiency of labor and construction equipment. Wage rates at 18 1/2 per cent over the 1913 level continue at the peak for all time, while all building costs, including labor, are less than 40 per cent over 1913. A modern factory building, 200 feet long and 100 feet wide of steel and concrete construction can be erected in the average mid-western city for \$1.40 a square foot against \$1.87 in 1923, a high mark of \$2.55 in 1920 and \$1.60 in 1913. The decline in costs is resulting in a marked increase in inquiries from manufacturers contemplating new construction, according to Austin Co. officials.

"Seven to ten per cent difference in the volume of retail business marks the differential between a good and a bad year. If all of the unemployed in San Francisco were now to be employed their buying power would swing the balance from a period of depression to one of prosperity."

"The more we patronize San Francisco manufacturers the more jobs we provide for our own workers. Quality and price and service being equal it is the part of wisdom to spend our money with our own people."

These were the statements of L. H. Marks, director of the Chamber of Commerce, at the opening luncheon of the San Francisco Trade Week.

"The 'buy at home' idea, 'like everything else, could be carried to extremes," continued Marks. "We have here in San Francisco branches of Eastern establishments employing hundreds of local people, and they must be recognized, but generally speaking, I think that we would all of us prefer to do business with people who have our own interests at heart, people whom we know, than with salesmen who come here once or twice a year, collect their commissions on their sales and go their way." Contrasting the difference in business conditions of a few years ago, during, and immediately following the war, Marks said: "The margin of profit then was such that if we were shown merchandise that looked attractive we bought it without scrutinizing the cost, but with the return to normal conditions it was a different story. We buy carefully, and, speaking as one retailer, I believe that all things being equal we should buy at home."

TO DISCUSS EARTHQUAKES

Earthquakes and Earthquake Resistance will be discussed in a series of lectures to be given during the spring of 1931 by Prof. K. Suyehiro, well-known Japanese authority, under the auspices of the American Society of Civil Engineers. The talks will be delivered at a number of American universities yet to be se-

TRADE LITERATURE

Caterpillar Tractor Co., San Leandro, Calif., has issued a 32-page illustrated booklet and a large broadside describing the new model 60 leaning wheel grader.

How pure water can be obtained from the ocean at low cost by means of the Lea distillation process is told in a 14-page booklet published by Henry I. Lea, Santa Monica, Calif.

Book 1252 of the Link-Belt Co., Chicago, Ill., describes the improved "Clean Water" traversing intake screens manufacturer by the company.

Jordan Concrete Pipe Company, operating a plant at McKinley Ave. and the Golden State Highway, Fresno, is completing negotiations for the purchase of the plant of G. H. Holston and Sons at Caruthers.

Linatex, a resilient abrasion resisting rubber with many uses in mining and general engineering, is described in a 24-page booklet of the Wilkinson Process Rubber Sales Corp., 53 West Jackson Blvd., Chicago, Ill.

Recent bulletins issued by the Sullivan Machinery Co., Chicago., include the following: 83-R, portable air compressors; 83-T, direct motor-driven vertical compressors; 83-X, belt-driven single-stage compressors; 83-Z, vertical, high-pressure compressors; 87-C, rotating drills; 87-E, self-rotating water stoppers.

The large variety of construction machinery produced by the six divisions of the National Equipment Corp., Milwaukee, Wis., is described and illustrated in a 36-page catalog M-5. A separate publication of 43 pages is devoted to the Koehring line of pavers.

Simplex Oil Heating Corp., a national institution, with main offices at 30 Church street, New York, and branches at 820 Parker street, Berkeley, and Hunter-Dulin Bldg., San Francisco, has issued a 12-page illustrated bulletin featuring Simplex Oil Burning Systems of the industrial type. The bulletin is available on request to the main or branch offices of the company.

United Roofing Co., Ltd., capitalized for \$5000, has filed articles of incorporation with the county clerk. Incorporators are Frank A. Young, Mary S. Young and Vincent Surr. The principal place of business is San Francisco.

The second of a series of centrifugal pump selection chart bulletins has been issued by Goulds Pumps, Inc., Seneca Falls, N. Y. This book, bulletin 201, covers multi-stage pumps for capacities up to 2000 gal. per minute and heads up to 2400 ft. Within the limits indicated, it contains charts enabling the prospective pump user to determine just what pump is best suited to his individual requirements, and also complete descriptions and dimensions for pumps manufactured by the company.

HERE — THERE —
EVERYWHERE

The council-manager form of government will be placed before the voters of Oakland at the November election. The city council has adopted a resolution directing that the proposal be placed on the ballot.

A Pacific Northwest chapter of the Institute of Scrap Iron & Steel, Inc., has been formed by industries in Washington, Oregon and British Columbia, according to announcement made by Julius Giant of the Pacific Iron and Metals Co., of Seattle, who was elected president of the chapter.

Material for construction or repair of hotels in Mexico may henceforth enter that country duty free under a decree issued by the treasury department. The object is to encourage establishment of hotels and consequently to boost tourist travel. Hotels must pay duty on their furniture, however.

A prediction that men in the future all over the world will work but three days a week and be paid high wages is made by Sir William Jovitt, attorney general of England. The Englishman said there will be ups and downs in the wide world economic situation, but no permanent recovery until that time. Sir William placed a share of the blame for England's unemployment situation on the Wall Street crash last fall.

St. George Holden was elected president of the Home Builders' Association of San Francisco at the annual election of officers held at the Hotel Sir Francis Drake last Thursday. Other officers elected were: Edward Jose, first vice-president; J. V. Campbell, second vice-president; L. B. Ham, third vice-president; Grace Perego, secretary-treasurer; directors are: James Arnott, R. H. Stevenson, Louis J. Stoff, Fred Grannis, H. C. Mangels and H. Grahn.

The International Congress of Architects will hold its 1931 meeting in Washington, D. C., it was voted at the closing session of the 1930 meeting held at Budapest, Hungary, September 13. The opening sessions are planned for Washington in connection with the annual convention of the Institute. Later the Congress will convene in New York and, as a part of the architectural program of the World Exposition, in Chicago. The invitation to hold the 1931 meet in the United States was extended by Frank C. Baldwin of Washington, secretary of the institute, who was designated by President Hoover as the American delegate to the Congress.

Among recent publications of the General Electric Co., Schenectady, N. Y., are the following: Illustrated booklets on the arc welding of structural steel, centrifugal compressors, airport illumination and the Selsyn system of remote signaling, control, and indication; catalog leaflets on atomic-hydrogen arc-welding equipment, industrial haulage locomotives and miscellaneous electrical apparatus including controllers, starters, resistors, switches, thermostats, photoelectric relays and motors.

ALONG THE LINE

Resignation of O. H. Carter, manager of the Fresno Lumber Company, as a director of the Fresno Building Exchange, and appointment of Eugene Thompson of Thompson Brothers' contracting firm to fill Carter's unexpired term, is announced by C. E. McMullin, president of the Exchange. Thompson will serve until the organization's annual election next March.

Owners of property in the first fire district of Providence, R. I., have been notified to have the roofs of their buildings covered with non-inflammable roofing by October 1, 1931, when the roofing law passed ten years ago becomes effective. Many roofs in this district are now of wood. Outlying sections of the city will not be affected by the law until 1935.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., has appointed two assistant district managers: Fred T. Whiting for the Northwestern district, and T. R. Langan for the Northeastern district. Mr. Langan will continue as manager of the transportation division of the Northeastern district.

Charles Gulick has joined the staff of the engineering department of the College of the Pacific at Stockton. Mr. Gulick is a former Stockton engineer and was in charge of construction of the College of the Pacific buildings during the three years in which he was associated with the architectural firm of Davis-Pearce, Inc., of Stockton. During the past four years he was associated with the Riverside Portland Cement Company.

M. C. Woodruff, city building inspector of San Jose, has been named by the Jan Jose city council to represent that city at the annual convention of the Pacific Coast Building Officials' Conference to be held in Long Beach, September 29 to October 4.

Eugene Chapter of the Northwest Master Painters' Association was organized recently at Eugene, Ore. E. A. Kurnutt was elected president; S. L. Lyons, vice-president; Burr E. Fisher, secretary-treasurer. Other charter members are Earl Kast, M. O. Plato and Jepsen Bros., Earl Ludford, Ray Farnbrook and Louis W. Waldorf are dealer-associate members.

HONOR FOR SKILL

The Architects Club of Chicago is pushing a scheme for a permanent plan of Craftsmanship Awards to worthy building trades mechanics in construction work when a committee after careful study decides who are worthy of receiving a diploma and a button. Recently 40 mechanics were rewarded and given public recognition for their outstanding ability in performing their different types of construction in the Board of Trade Building.

A number of contractors favor the plan and express a willingness to go along and have it applied on their jobs. It is expected to have it in general use next year.

TRADE NOTES

Border Lumber and Commercial Co., Ltd., of San Diego, organized to engage in the lumber business, has filed articles of Incorporation with Secretary of State Jordan. The company is capitalized at \$100,000.

Wood preserving Corporation of Pittsburgh, Pa., has been formed, uniting the Ayer & Lord Tie Co. of Chicago, and the Century Wood Preserving Co. of Pittsburgh. The two companies will continue under their present names and managements.

Osthoff & Company, with headquarters in San Francisco, has recently established a branch factory in Oakland. The company manufactures flasher signs for advertising purposes. This old established San Francisco manufacturer has 30 on its payroll in San Francisco, and has opened the Oakland branch factory with five on its payroll. C. F. Goss is Oakland manager.

Los Banos Lumber and Supply Co. of Los Banos, announces change of firm name to Reeves Lake Land Co., Ltd., of Fresno. Notice of change was recently filed with the county clerk at Merced.

MODESTO ADOPTS UNIFORM BUILDING CODE

The uniform building code as recommended by the Pacific Coast Building Officials' Conference has been officially adopted by the Modesto city council.

The code provides a uniform building standard and is flexible, according to City Engineer Frank J. Rossi, at whose request city officials adopted the measure.

The code establishes four building districts—the strictly business, the area immediately adjoining the business section, the residential district, and industrial zone.

Various fire restrictions are imposed on buildings erected in each district and, in addition, the nature of the business to be conducted is taken into consideration. The feature of the code which provides for close fire protection regulation is the most important, Rossi said.

It fits in with the city zoning ordinance, recently adopted at a municipal election, setting aside certain sections for residences and other parts of the city for residential use.

LAND PRICE HOLDS UP P. O. PROJECT AT MODESTO

William Arthur Newman, supervising federal architect for the Pacific states and Hawaii, announces that construction of the proposed federal building in Modesto must be postponed indefinitely because of the attitude of one Modesto property owner.

Newman said the government has offered a property owner \$14,000 for a 50-foot strip adjoining its Modesto lot which has been assessed at \$2000, and was refused.

"The government has gone the limit in this case," Newman said, "but will not stand for holdups." He said the "selfishness" of one property owner may delay construction years.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1684).

R-3220-S ENGINEER, college graduate in mechanical, chemical or mining preferred. Must not be over 35 years and with at least five years' experience in designing and estimating plant equipment. Salary \$250-\$275 mo. Permanent. Location, Bay Region, and only local applicants can be considered for interview.

K-318-W-1461-C-S ENGINEER, specialist in forestry engineering, with long experience in logging operation, with knowledge of ice roads and construction of same, horse and mechanical transfer, construction of chutes, flumes and logging railroads. Should be capable of planning the felling of trees in a mountainous region, as well as the handling and transportation of the logs to the sawmills. Work will be on an area of about 1,500,000 acres. Apply by letter. Location, foreign.

K-305-W-1856-C-S METAL FURGIST, iron and steel, with thorough technical background and considerable actual experience in steel foundries. Must be familiar with the problems of steel foundries and capable of solving such problems in a consulting capacity. Must be able to convince clients and inspire confidence in advice given. Man should have good presence and be able to talk before engineering societies and write technical articles for publication. Salary open. Location, East and travelling.

R-3324-S CHIEF DRAFTSMAN, preferably not over 40, for large engineering drafting room. Will not be responsible for design but applicant should be a university graduate with wide experience. Must know how to handle men and get results through leadership. Salary depends upon ability. Apply by letter. Location, Northern California.

R-3303-S ENGINEER, not over 35, graduate in chemical or mechanical engineering, with 4-7 years' experience preferably as designer or estimator and a record indicating considerable initiative and executive ability. Oil refinery experience desirable. Salary open. Permanent opportunity for right man. Apply by letter. Location, Northern Calif.

R-3322-S ELECTRICAL ENGINEER graduate, preferably not over 35 years, for special work requiring several years' experience with telephone company. Salary \$175-\$225 mo. Permanent. Apply by letter. Location, San Francisco.

W-1028 CONSTRUCTION SUPERINTENDENT, 35-40, to take charge of the building of a fertilizer plant. This experience essential. Salary \$450 a month and expenses. Apply by letter. Loc., British Columbia.

BRICK MANUFACTURERS ISSUE PUBLICATIONS

Two recent publications issued by the Common Brick Manufacturers Association of America, Cleveland, Ohio, are of special interest to architects and builders. These are: "Contemporary Detail in Common Brick" and "Brickwork Specifications." The former, in loose-leaf form, reproduces pictorially many interesting examples of artistic construction with brick as the medium of expression.

BUILDING CHIMNEYS TO WITHSTAND WINDS

Figures on wind strong enough to threaten chimneys and smokestacks have been compiled by the Bureau of Standards in an effort to eliminate guesswork in building such structures, it is announced by the Bureau, says the U. S. Daily.

The Bureau has found that building designers are safe if they calculate a wind pressure of 20 pounds per square foot, and bases this recommendation on a wind speed of 100 miles an hour, according to the statement, which was made public by the Department of Commerce.

The statement follows in full text:

One of the major elements determining the cost of a large chimney or stack is the amount of wind pressure which the chimney is to withstand. Many specifications are drawn up in which the chimney is required to withstand a wind of 100 miles per hour, but since there are many opinions and little knowledge as to the pressures imposed by a wind of this amount, different bidders often design for different loads and therefore do not bid on structures of the same strength. In many instances it is felt that the values of wind pressure used are too high, thus increasing the cost without corresponding benefit.

For several years an investigation of the wind pressure on chimneys and other cylindrical structures has been in progress at the Bureau of Standards. Model testing in wind tunnels does not give a sufficiently satisfactory answer in this instance and it has been necessary to supplement these tests by measurements on large structures in natural winds. The investigation showed that the wind pressure is a function of the ratio of the height of the chimney to its diameter and that a wind pressure corresponding to 20 pounds per square foot of projected area at a wind speed of 100 miles per hour is a safe value to use in designing chimneys of which the exposed height does not exceed 10 times the diameter.

This investigation will be discussed at greater length in the September number of the Bureau of Standards Journal of Research.

GOOD IDEA

"In these dull times when contractors are not overburdened with work and have plenty of leisure time, it would be a good idea for them to get together and talk over their own situation," says a bulletin of the National Ass'n of Building Trades Employers. "There are many trade problems to be solved, so why not do it now, rebuild if necessary, but augment your associations with new timber and new activities that are necessary to make any organization a growing adjunct to a successful business."

STEEL ORDERS DECLINE

U. S. Steel Corporation reported unfilled tonnage on August 31 totaled 3,580,204 tons, a decrease of 411,851 tons from the total of 4,022,055 tons on July 31. This compares with unfilled tonnage of 3,968,064 on June 30, and 3,655,211 on August 31, 1929.

A. G. C. TO FORM RESIDENTIAL UNIT

Development of assured skill, integrity and responsibility in the residential field of the construction industry, with a view to stimulating activity and gaining public confidence in this body having a branch of building, is to be undertaken by the Associated General Contractors of America at the fall meeting of its executive board October 6, 7 and 8, at Rye, N. Y.

A plan for the creation of a residence contractors' section of the association's building division has been recommended by A. E. Horst, of Philadelphia, president of the organization and his cabinet and is expected to be approved and launched at the fall board meeting, which will be attended by several hundred of the largest general contractors of the country.

The proposed new section of the association is in line with the objective of President Hoover's White House Conference on Home Building and Home Ownership, to the planning committee of which Mr. Horst recently was appointed by the President.

Under the current conditions and past trends in the home building field, according to Edward J. Harding, assistant general manager of the contractors' organization, indicates that much constructive work can be done through the establishment of such a section on the same principles that have marked the progress of the Associated General Contractors in handling outstanding problems facing construction in other fields.

Although the Associated General Contractors heretofore has been primarily devoted to the problems of the larger contractors as a group, leaders of the industry now feel that some national trade association should be provided the residence builder to assist him in bettering trade practices and help him in promoting the construction of more and better homes, Mr. Harding states.

In taking this step toward providing for the affiliation of the residence contractors with the Associated General Contractors special attention will be given to see that methods of promotion, quality of workmanship, appraisal methods and conditions in the second mortgage field are placed on a sound basis, Mr. Harding said. The present depression he stated, has put emphasis to the fact that the credit system in home building is not as soundly organized as other branches of credit and this subject will be one of the important questions to be dealt with by the board.

Building and loan associations and other financial institutions, small house architects, building supply interests, manufacturers of home building materials, real estate men and other agencies directly involved in the field will be invited to meet on common ground, set up new standards of procedure and initiate soundly conceived active programs for the stimulation of home building, the creation of new confidence in the minds of the public and work out equitable solutions to the numerous ills that at present hinder the effective functioning of the industry.

The initiative taken by A. G. C. units in Minneapolis, Minn., Portland, Ore., and Spokane, Wash., where home builders divisions already have been formed, indicates that the contractors of this section of the industry are alive to the possibilities for construction work and that the basis of national affiliation and national effort will meet with their approval, Mr. Harding believes.

Petitions have been presented to the Inadera County supervisors requesting that a body be called an election to vote bonds of \$100,000 to finance the erection of a new county hospital group. The petitions contain 719 signatures.

\$29,650,000 For Oregon Power Projects

In seven separate applications filed with the Oregon state engineer the California Oregon Power Co. has asked for authority to appropriate a total of 3355 sec.-ft. of water from the North Umpqua River for the purpose of developing approximately 138,661 hp. The estimated cost of the seven projects will be \$29,650,000. According to information in the office of the state engineer the utility has already received a preliminary permit from the Federal Power Commission for right-of-way over government lands.

Partial descriptions of the contemplated projects, as given in the applications, are as follows:

Rock Creek Project—Appropriation of 800 sec.-ft.; concrete arch dam 215 ft. high and 1350 ft. long; tunnel 4300 ft.; fall 221.5 ft.; horsepower 20,136; estimated cost \$8,700,000.

Clearwater Project No. 1—Appropriation of 150 sec.-ft.; concrete slab and rock dam 20 ft. high and 350 ft. long; canal and pipe line 34,000 ft.; fall 555 ft.; horsepower 10,091; estimated cost \$1,500,000.

Clearwater Project No. 2—Appropriation of 235 sec.-ft.; pipe lines and canals 35,500 ft.; concrete arch dam 53 ft. high and 320 ft. long; fall 875 ft.; horsepower 23,366; estimated cost \$2,100,000.

Lemolo Project No. 1—Appropriation of 400 sec.-ft.; rockfill and concrete slab dam 60 ft. high and 430 ft. long; pipe lines and canals 38,600 ft.; fall 775 ft.; horsepower 35,227; estimated cost \$3,500,000.

Lemolo Project No. 2—Appropriation of 400 sec.-ft.; simple masonry dam; tunnels and pipe lines and canals 19,200 ft.; fall 750 ft.; horsepower 34,091; estimated cost \$2,100,000.

Tonketee Project—Appropriation of 600 sec.-ft.; concrete spillway dam with rockfill ends; tunnel 27,600 ft.; fall 715 ft.; horsepower 48,750; estimated cost \$6,500,000.

Boundary Project—Appropriation of 800 sec.-ft.; concrete arch dam 220 ft. high and 450 ft. long; tunnel and penstock 2600 ft.; fall 137 ft.; horsepower 17,000; estimated cost \$5,350,000.

MILLWORK INSTITUTE OF CALIFORNIA WILL INCORPORATE

As a result of action taken at the recent tri-annual conference of the Millwork Institute of California the Institute will be incorporated under the laws of the state as a non-profit organization.

L. G. Sterett, manager of the service bureau since headquarters were moved to Fresno, has been appointed secretary of the Institute. Miss Caroline Wood will be his assistant. As soon as finances permit Mr. Sterett will be given an assistant for trade promotion work.

Indebtedness of the association is rapidly being liquidated and the Institute is now in a sound financial position, according to President A. W. Bernhauser.

An effort will be made by the Institute to have either the University of Southern California or Stanford University make a survey of the industry in the state to determine the distribution of the millwork dollar.

A legislative committee to look after the interests of the industry at the coming session of the legislature will be named by the board of directors.

The question of having two instead of three meetings a year, one in the fall in the north and the other in the south in the spring, will come up at the annual meeting to be held in San Francisco next November.

Californians Lead In Forest Fire Prevention

The State of California receives more Federal funds for fire prevention under the Clarke-McNary Act than any of the other forty states participating in the appropriations made under this law.

This is not only on account of the high estimated cost of protecting private lands in California but also because the state and private owners have spent more money for fire prevention than elsewhere in the U. S.

The outstanding feature that impresses visitors to this state, says Regional Forester S. B. Show, is the general public observance of state legislation and county ordinances, and the number of clubs and civic organizations that wholeheartedly support all laws and regulations relating to the prevention and suppression of fires. Examples of such regulations found only in the national forests of California are the special requirements of the U. S. Forest Service relating to the carrying of a shovel and ax by all camping parties, the no-smoking rule in the national forests except at flag stations or at camps and places of habitation. The state and some of the counties have enacted laws prohibiting the throwing of burning matches and tobacco from moving vehicles and a state law requires campers to obtain a permit from the owner before building a camp fire on private lands outside of the national forests to supplement a similar requirement by the Forest Service in the national forests.

The underlying cause, according to Mr. Show, of this widespread sentiment is the increase in fires within the past ten years in California that are attributed largely to ignorance and carelessness on the part of persons who do not realize how inflammable the grass, brush and forest cover is during the hot, dry summer months.

Southern California, with one-half of the population of the state living on 1.4 per cent of the land area and having available 7/10 of the water supply, is foremost in regulations and laws that will help prevent fires. In that region the conservation of water supply, which comes from the brush and forest covered mountains, is of vital importance. A strong public sentiment stands behind all such laws and rules, whether Federal, State or county, and is reflected in the activities of numerous fire prevention and protection organizations and in the fines meted out by judges in fire law enforcement cases. The San Joaquin and Sacramento valleys are rapidly approaching similar conditions with respect to water in relation to their growing population, increasing acreage of irrigated lands, and the question of water supply for large municipalities, so that the public sentiment regarding forest preservation is increasing in proportion in these sections of the state.

VOCATIONAL TRAINING SCHOOL OPENED AT PITTSBURGH

Pittsburgh's new \$2,000,000 trade school began activities Sept. 1. It will be used for training students for the building and industrial trades. The school will offer vocational instruction for those who plan to continue their education in college as well as for those who expect to enter directly into industry.

The new building is six stories high and contains shops completely equipped.

1930 Revised Edition of San Francisco Building Laws now on sale at office of Daily Pacific Builder; \$1.00 per copy.

HIGH EDGES ON SIAMESE ROADS PREVENT WASHOUTS

As motorists who travel unfrequented roads have occasion to know, a newly constructed dirt road generally has a high crown in the center, sloping off toward the edges so that it will shed water.

This practice, accepted as standard in most countries, is just the reverse of the method in far-off Siam where, instead of a crown, the road is so constructed that the edges are eight and one-half inches higher than the center, according to a report submitted for the Sixth International Road Congress which will be held in Washington next month. This report was submitted by Luang Prinayogavibulya, chief of the Department of Ways, Bangkok, Siam.

Because Siam is generally flat, it was stated in the report, the highways consist mostly of embankments. Due to frequent and torrential rains, if the roads were built with crowns, the surfaces would soon be seriously damaged. To eliminate this they are constructed originally with the sides higher than the center and thus the water is retained in the roadway, seeping through the earth and helping to compact it, says Prinayogavibulya. Within a year, it has been found, a new road will be fairly compact by this method, while of the other type of road virtually nothing would remain.

The writer points out that timber being plentiful, bridges on new highways are made of wood.

PHOENIX VOTES BONDS FOR WATER IMPROVEMENTS

Bonds of \$2,364,000 have been voted by the city of Phoenix, Ariz., to finance construction in connection with the municipal water system. The program includes:

Construction of a flow line from the sand trap to reservoir, 48-inch diameter, to cost about \$1,300,000.

Construction of a flow line from the reservoir to 16th St. and Thomas Road, 48-inch diameter, to cost \$500,000.

Construction of a 42-inch pipe-line from 12th St. and McDowell Road, to 16th St. and Thomas Road, to cost \$146,000.

Construction of a 24-inch pipe-line from 16th St. and Thomas Road to 7th Ave. to cost approximately \$140,000.

Construction of belt line distribution system to cost \$138,000.

Installation of five well pumping plants at Verde River, \$25,000.

Construction of pump station at Verde River to cost \$24,000.

Bank protection at Verde, \$110,000.

Construction of a 10,000,000-gallon reservoir to cost \$92,000.

Purchase of well field, \$3000.

Water main in city, \$78,000.

NEW NEON COMPANY IS ORGANIZED

Business of western Neon tubing and sign manufacturers operating under Q. R. S.-DeVry corporation patents will be substantially increased this year through the formation of a new company which will consolidate the activities of licensees in 11 western states, T. M. Fletcher, president of Q. R. S.-DeVry corporation, recently announced in Chicago.

The new company, Q. R. S. Neon Corp., Ltd., was formed by the California Electric Sign Co., Ltd., of Los Angeles and San Francisco; "Sun" Beem Neon Corp. of Seattle, Wash.,

and Butte, Mont., and Britte Lite Signs, Inc., of Denver and its subsidiary, Britte-Lite Neon Advertisers of Amarillo, Texas.

ALAMEDA COURTHOUSE HEARING SET FOR SEPT. 22

An alternative writ of mandate has been signed by Superior Judge T. W. Harris compelling the Alameda County board of supervisors to appear before him Sept. 22 to show cause why the board has not rebuilt the Alameda county courthouse.

In appearing before Judge Harris the supervisors—Ralph Richmond, Charles W. Heyer, Walter M. Davis, Redmond C. Staats and William J. Hamilton—must also show why no provision has been made for the preservation of law books, records, papers, pleadings and documents.

The writ was signed following the filing of a petition by Richard Liebman, attorney.

Liebman declares that by reason of the age of the structure, built in 1871, and its constant use and lack of repair, it has deteriorated and rotted to such a degree that it cannot be repaired to make it safe to life, health or the records.

Successive grand juries, the petitioner declares, have condemned the courthouse as obsolete, overcrowded, unsanitary, dangerous to life and property and a fire hazard.

A recent investigation of the structure by the state industrial accident commission, finding a mong other things, that the courthouse was and is a fire hazard.

The petition charges that the supervisors, "many times notified of the unsafe condition of the building and the conditions set forth in the document," have refused to rebuild the courthouse or provide a safe place for documents.

Three successive bond issues for the erection of a new courthouse have failed. At present the board is considering the possibility of placing the question again before the voters at the November general election.

ENGINEERS AT U. OF C. NAME STUDENT HEADS

Students in engineering to head activities for the year have been named by Harry C. Stanley, of Oakland, secretary of the University of California chapter of the American Institute of Electrical Engineers. The committees will have charge of the student activities in the College of Engineering during the present year.

Included in the appointments of those who will serve on the committees are:

Tring—Robert W. Hollis, chairman, San Diego; Edward B. E. Atkinson, Berkeley; Arthur C. Jenkins, San Francisco.

Refreshments—Charles J. Miller, chairman, Oakland; Allison J. Haun, Shively; William D. Hudins, Calverico.

Initiation—Warren Andresen, Berkeley; Americo Lazzari, Henry C. Kruger, Los Angeles; Edward V. Carlson, Oakland; Charles W. Hunter, Riverside; John D. Riner, Anaheim; Louis Zable, Los Angeles; Lois R. Rockholt, Yuba City.

Banquets—George L. Powell, chairman, Willowbrook; George H. Carlson, Berkeley; Victor T. Johnson, Los Angeles.

Dues—Clifford L. Merkle, chairman, San Francisco; Robert E. Cooper, Jr., Alameda; Arthur C. Forster, I. Morgan White, Harry C. Stanley, Oakland.

ADOPT GROUP SELLING

The Clear Fir Lumber Co., the Tacoma Harbor Lumber Co., the Gange Lumber Co. and the DeLance Lumber Co., all of Tacoma, Wash., have joined in a group selling policy to market their products in California. A. C. Penberthy has been appointed exclusive distributor for the group of mills in this state. He will be assisted by R. F. Martin, formerly of Tacoma.

DRAFTSMEN WANTED BY U. S.

Positions are open under the civil service for senior topographic draftsman, \$2,000 a year; topographic draftsman, \$1,800; assistant topographic draftsman, \$1,620, and junior topographic draftsman, \$1,440. Applications must be on file with the Civil Service Commission, Washington, D. C., by Oct. 1. There will be no examination.

In order to set up a standard guide for realtors in the appraisal of typical office buildings, the Appraisal Division of the National Association of Real Estate Boards has just issued a complete appraisal of an actual office building in an hypothetical location. The model valuation, which is being sent to every member of the Appraisal Division, conforms in all particulars to the Appraisal Standards of Practice adopted by the Division. The appraisal was made by Henry A. Babcock, Chicago, chairman of the Appraisal Division, and the report is edited by Dr. Arthur J. Mertzke, director of education and research of the National Association.

The report contains all the data which the Appraisal Standards of Practice enumerate as necessary for a comprehensive and exact computation of the value of this type of building, including: income, expense and net earnings of the building; net returns allocated to the building; earnings on both the land and the building and total earnings; the estimated cost of replacement of the structure; summary and detailed accounts of rentals and vacancies; summary and detailed accounts of appraised rentals; anticipated normal annual operating expenses for the building; a record of income, expense and net earnings, and a record of operating expenses. Photographs, charts and diagrams included in the model valuation are: a view of the building, a plat of the site, a location map, two graphs, one showing future rentals from signed leases and the other presenting the relation between earnings and value, and plans of the first and second floors and a typical upstairs floor.

This model office building valuation is the second of a series of four complete appraisals, of as many types of properties, which the Appraisal Division is issuing this year. The first model appraisal to be issued was on the valuation of an apartment building, not a mammoth structure, but the type of apartment house to be found in any growing city. E. L. Somerville, Minneapolis, Minnesota, made the appraisal of the apartment house. The two remaining model appraisals, shortly to be issued, will include a valuation of a single unit dwelling and a valuation of a store property. The former is to be made by Philip Kniskern and Charles T. Uphoff, New York City. Maurice Rely, Worcester, Massachusetts, a member of the board of directors of the National Association of Real Estate Boards, will make the valuation of the store property.

Building News Section

APARTMENTS

Sub-Contracts Awarded.
APARTMENTS Cost, \$175,000
SAN FRANCISCO, NE Buena Vista Ave. and Waller St.

Six-story class C basement and sub-basement apartments (36 2- and 3-room apts. and one 10-room apartment).

Owner—Suncal Investment Co.
Architect—Albert H. Larsen, 447 Sutter St.

Contractor—Mission Concrete Co., 270 Turk St.

Rein. Steel—W. S. Wetenhall, 17th & Wisconsin Sts.

Steel Forms—Steelform Contracting Co., Monadnock Bldg.

Sub-bids are being received by architect on all portions of the work, except excavation, concrete work, rough carpentry, metal trim, lathing and plastering, which are being handled by the general contractor.

Plumbing and Heating Contract Awarded.

APARTMENTS Cost, \$35,000
SAN FRANCISCO, NE Broderick St. and Golden Gate Ave.

Three-story and basement frame and stucco apts. (12 apts.)

Owner—C. E. Lynn, 1435 Steiner St.
Plans by L. O. Berg, 675 Corbett Ave.
Plumbing and Heating—N. George Wienholz, 1450 Howard St. As prev. rep.

Brick Work—Albert Nelson, 242 Ocean Avenue.

Concrete and Excavating—D. Fazio, premises.

Carpentry Labor—W. B. Zane, premises.

Owner is taking bids on all other portions of the work.

Plans Being Prepared.
APARTMENTS Cost, \$1,225,000
LOS ANGELES, Cal. Sunset Blvd. & Alta Loma Drive.

Thirteen-story and basement reinforced concrete class A apts.

Owner—Sunset-Loma Holding Co.
Architect—Arthur I. Rouda, Lissner Bldg., Los Angeles.

Preparing Working Drawings.
APARTMENTS Cost each, \$50,000
SAN FRANCISCO. Richmond District (exact location withheld).

Three 3-story and basement frame and stucco apartments.

Owner and Builder—M. P. Storheim, 475 Euclid Ave.

Plans by Lawrence Ebbets, Call Bldg.

Sub-bids will be taken Sept. 17th.

Bids to Be Taken in One Week.
APARTMENTS Cost, \$40,000
SAN MATEO, San Mateo Co., Cal. Bayview Heights.

Two-story and basement frame and stucco apartments.

Owner—E. J. Warren, Los Angeles.

Plans by Carl Schuetz, 1125 The Highway, Redwood City.

Preparing Preliminary Plans.
ALTERATIONS Cost, \$—
SAN FRANCISCO. 499 Buena Vista Avenue.

Alter residence for apartments.

Owner—Mrs. J. A. Wilcox, 499 Buena Vista Ave.

Architect—Henry H. Gutterson, 526 Powell St.

Construction Indefinitely Postponed.
APARTMENTS Cost, \$300,000
OAKLAND, Alameda Co., Cal. Excelsior and Capelli Sts.

Eight-story Class A, B and C steel frame apartments (brick exterior, concrete and wood floors).

Owner—Leonard Thomas et al, 731 E-Tenth St., Oakland.

Plans by Leonard Thomas, 731 E-10th St., Oakland.

Plans Completed.
APARTMENTS Cost Approx. \$70,000
SAN FRANCISCO. Vallejo St. near Octavia.

Six-story and basement concrete apartments.

Owner—A. Anderson.

Architect—Clausen & Amandes, Hearst Bldg., San Francisco.

More information will be given in a few days.

Contract Awarded.
APARTMENTS Cost, \$250,000
HOLLYWOOD, Los Angeles Co., Cal. Argyle Avenue.

Eight-story Class A reinforced concrete apartments (90 rooms).

Owner—Douglas L. Edmons.

Architect—Thomas P. Barber and Paul Kingsbury, Union Insurance Bldg., Los Angeles.

Contractor—Peter Elvad, 6231 Afton Place, Los Angeles.

Sub-Bids Being Taken.
APARTMENTS Cost, \$150,000
LOS ANGELES, Cal. No. 535 S. Gramercy Place.

Eight-story reinforced concrete Class A apartments (42x122 feet).

Owner and Builder—Peter Elvad, 6231 Afton Place, Los Angeles.

Architect—Thomas P. Barber & Paul Kingsbury, Union Insurance Bldg., Los Angeles.

Preparing Plans.
APARTMENTS Cost, \$300,000
GLENDALE, Los Angeles Co., Cal. N. Brand Blvd.

Four-story and basement apartments (120 rooms) (brick, hollow tile and masonry construction).

Owner—Oscar A. Litchen, Leon Relch et al, Security Bldg., Long Beach.

Architect—Lewis W. Palmer, Central Bldg., Los Angeles.

Mgr. of Constr.—Walter Romey, Glendale.

Preparing Plans.
APARTMENTS Cost, \$300,000
GLENDALE, Los Angeles Co., Cal. N. Brand Blvd.

Four-story and basement apartments (120 rooms) (brick, hollow tile and masonry construction).

Owner—Oscar A. Litchen, Leon Relch et al, Security Bldg., Long Beach.

Architect—Lewis W. Palmer, Central Bldg., Los Angeles.

Mgr. of Constr.—Walter Romey, Glendale.

Preparing Plans.
APARTMENTS Cost, \$300,000
GLENDALE, Los Angeles Co., Cal. N. Brand Blvd.

Four-story and basement apartments (120 rooms) (brick, hollow tile and masonry construction).

Owner—Oscar A. Litchen, Leon Relch et al, Security Bldg., Long Beach.

Architect—Lewis W. Palmer, Central Bldg., Los Angeles.

Mgr. of Constr.—Walter Romey, Glendale.

Preparing Plans.
APARTMENTS Cost, \$300,000
GLENDALE, Los Angeles Co., Cal. N. Brand Blvd.

Four-story and basement apartments (120 rooms) (brick, hollow tile and masonry construction).

Owner—Oscar A. Litchen, Leon Relch et al, Security Bldg., Long Beach.

Architect—Lewis W. Palmer, Central Bldg., Los Angeles.

Mgr. of Constr.—Walter Romey, Glendale.

Preparing Plans.
APARTMENTS Cost, \$300,000
GLENDALE, Los Angeles Co., Cal. N. Brand Blvd.

Four-story and basement apartments (120 rooms) (brick, hollow tile and masonry construction).

Owner—Oscar A. Litchen, Leon Relch et al, Security Bldg., Long Beach.

Architect—Lewis W. Palmer, Central Bldg., Los Angeles.

Sub-Figures Being Taken.
APARTMENTS Cost, \$75,000
EL CERRITO, Contra Costa Co., Cal.

Three-story frame and stucco apartments with tile roof.

Owner—B. Schapira, Richmond.

Architect—Raymond De Sanno, 2854 Melvia St., Oakland.

Contractor—Edward W. Larmer, 90 Fairview Ave., Piedmont.

Plans Completed.
APARTMENTS Cost, \$150,000
LOS ANGELES, Cal. No. 535 S. Gramercy Place.

Eight-story reinforced concrete Class A apartments (42x122 feet).

Owner and Builder—Peter Elvad, 3428 Amesbury Road, Los Angeles.

Architect—Paul Kingsbury, Union Insurance Bldg., Los Angeles.

Plans Being Floured.
APARTMENTS Cost Approx. \$70,000
SAN FRANCISCO. Vallejo St. near Octavia St.

Six-story and basement concrete apartments.

Owner—A. Anderson.

Architect—Clausen & Amandes, Hearst Bldg., San Francisco.

Sub-Bids Being Taken By Owner.
APARTMENTS Cost, \$50,000
OAKLAND, Alameda Co., Cal. 35th St. near Telegraph Ave.

Three-story frame and stucco apartments with concrete basement.

Owner and Builder—Nelson Bros., 13th Ave. and E-36th St., Oakland

Architect—Chester Treichel, American Bank Bldg., Oakland.

Segregated Bids Being Taken.
APARTMENTS Cost, \$200,000
BERKELEY, Alameda Co., Cal. Sacramento St. and University Ave.

Three-story Class C brick apartments (56 2, 3 and 4-room apts.)

Owner—Davis-Pearce Co., Grant and Weber Sts., Stockton.

Architect and Manager of Construction—Davis-Pearce Co., Grant and Weber Sts., Stockton

Lathing, Plastering and Cast Stone Contract Awarded.

APARTMENTS Cost, \$35,000
SAN FRANCISCO. NE Broderick St. and Golden Gate Ave.

Three-story and basement frame and stucco apartments (12 apts.)

Owner—C. E. Lynn, 1435 Steiner St., San Francisco.

Plans by L. O. Berg, 675 Corbett Ave., San Francisco.

Lathing, Plastering and Cast Stone—D. F. Sullivan, 121 Henry St., San Francisco.

Contract Awarded.
ALTERATIONS Cost, \$—
OAKLAND, Alameda Co., Cal. Madison and Lake Sts.

Alterations and additions to one-story frame apartments (add porch, etc.)

Owner—San Jose Bldg. & Loan Assn., 16th St. and San Pablo Ave., Oakland.

Architect—W. E. Schlirmer, 700 21st St., Oakland.

Contractor—George Swannstrom, 1723 Webster St., Oakland.

BONDS

ALTURAS, Modoc Co., Cal.—Until October 6 bids will be received by county supervisors for the purchase of \$7000 (additional) bonds of the Alturas Grammar School District; proceeds of sale to finance school improvements.

LAKEPORT, Lake Co., Cal.—Until September 26 bids will be received by county supervisors for the purchase of the \$35,000 bond issue of the Upper Lake Union School District; proceeds of the sale to finance erection of a new school, plans for which are being completed by Architect William Herbert, Santa Rosa.

CHURCHES

Preparing Working Drawings.
CHURCH Cost, \$250,000
SAN FRANCISCO, Funston Ave. and Judah St. (120x245 ft.).
Class A reinforced concrete church (2000 seating capacity).
Owner—Roman Catholic Archbishop of San Francisco, 1100 Franklin St., San Francisco.
Architect—Shea and Shea, 454 Montgomery St., San Francisco.
Plans will be ready for bids in two or three months.

Segregated Bids Being Taken.
CHURCH Cost, \$75,000
LOS ANGELES, Cal. SE Griffith Pk. Blvd. and Lucille Ave.
Three- and 4-story class A reinforced concrete church (180x130x 130-ft.).
Owner—Bethany Presbyterian Church (O. P. Bell, pastor).
Architect—Harry C. Hartley, Subway Terminal Bldg., Los Angeles.

Preliminary Plans Being Prepared.
CHURCH Cost, \$25,000
ROSEVILLE, Placer Co., Cal.
New church.
Owner—Methodist Episcopal Church. Harry W. O'Kane, Pastor, 109 Washington St., Roseville.
Architect—Chas. Dean, California State Life Bldg., Sacramento.
Whether building will go ahead or not depends upon the success of the financial campaign which commences Sept. 22nd.

FACTORIES AND WAREHOUSES

Sub-Buildings Being Taken.
BUILDING Cost, \$15,000
SAN FRANCISCO. SE Fifth and Folsom Sts.
One-story and mezzanine floor reinforced concrete industrial bldg.
Owner—Louis Lurie, 315 Montgomery Street.
Architect—S. Heiman, 57 Post Street, and O'Brien Bros. & W. D. Peugh, 315 Montgomery St.
Contractor—Louis J. Cohn, 1 De Haro Street.

Contract Awarded.
MILL Cost, \$100,000
BRODERICK, Yolo Co., Cal.
Rebuild concrete mill and construction of steel frame and corrugated iron warehouse.
Owner—California Rice Growers Assn. E. L. Adams, President, Chico.
Engineer—C. H. Snyder, 251 Kearny St., San Francisco.
Contractor—McGillivray Constr. Co., Folsom Blvd. and 65th St., Sacramento.
Work has been started on rebuilding of mill.

SANGER, Fresno Co., Cal.—Warehouse of the Prescott Brick and Lumber Co., just east of this city, was destroyed by fire Sept. 16 with a loss of \$10,000, partially covered by insurance. The structure covered an area of 150 by 300-ft.

Contract Awarded.
ALTERATIONS Cost, \$16,000
SAN FRANCISCO. SW Front St. and Jackson St.
Alterations and additions to warehouse.
Owner—Mrs. C. H. Baker, 2048 Market Street.
Engineer—L. S. Rosener, 233 Sansome Street.
Contractor—J. W. Coburn, 2048 Market St.

POWER PLANTS

UKIAH, Mendocino Co., Cal.—Until September 24, 8 P. M., bids will be received by F. C. Handy, city clerk, to

furnish f.o.b. cars Ukiah, electrical equipment, as follows:

One indoor type, single phase induction voltage regulator primary volts 2400, sec. volts 180/166 7 1/2/15% boost and lower.

Regulator to be complete with contact making volt meter, line drop compensator, motor control switch, limit switch and 220 volt 3-phase operating motor. Instruments must be wired and assembled on panelboard to regulator. Regulator must be complete for operating on 2400 volt circuit, except not to include current and potential transformers.

Delivery is to be made before Dec. 1. Further information obtainable from city clerk.

SAN FRANCISCO.—A second Wire and Cable Co., New York N. Y., awarded contract by Pacific Gas and Electric Co. to furnish and deliver 168 miles of one-inch hollow-core copper cable; delivery to be made before Feb. 1, 1931. The cable will be used in construction of a transmission line to connect up the company's new \$40,000,000 hydro-electric development on the Mokelumne River with the distributing substation at Newark, Alameda county.

This line will be 110 miles long, but having two circuits, will require 220 miles of wire. Fifty-four miles in the mountain regions will be of steel-core aluminum cable. The balance will be of copper. The line will operate at 220,000 volts. The transmission system will cost \$4,260,000 and \$2,000,000 more is being spent installing new equipment at the Newark plant to handle the additional power.

SAN FRANCISCO.—Until October 17, 11 A. M., bids will be received by the Regents of the University of California, Berkeley, to install distribution system for electricity, air and steam on the San Francisco Campus of the University of California. Plans obtainable at Cashier's Window, California Hall, Berkeley, on deposit of \$50, returnable.

SACRAMENTO, Cal.—City Manager James Dean seeks the authorization of the city council to proceed with grading, surfacing, and drainage work at the municipal airport, for which bonds of \$150,000 were recently voted. City Manager Dean proposes to carry on the work under the day-labor system, purchasing all materials necessary under the usual bidding procedure. The amount involved in this particular work is \$50,000. The request will be acted upon at the next meeting of the city council. Fred J. Klaus is city engineer.

CALIFORNIA.—Lyman Kins, State Director of Finance, is preparing a budget for submission to the new Governor involving an expenditure of \$8,000,000 for construction at state institutions.

Permanent improvement items for the next biennium in Governor Young's ten year State building program total \$6,532,500.

There is additionally \$1,000,000 appropriated for the new mental hospital in Southern California, \$375,000 available for the new prison for first offenders and \$200,000 in State Athletic Commission funds for barracks construction at the Yountville State Veterans' Home.

The proposed distribution of \$6,532,500 in the Young ten year program by departments is follows:

Department of Finance—State fair improvements, \$250,000.

Department of Institutions—Construction and repairs at hospitals, correctional schools, etc., \$2,640,500.

Department of Military and Veterans' Affairs—National Guard facilities

and Veterans' Home improvements, \$815,000.

Department of Education—Permanent improvement at teachers' colleges and special schools, \$2,147,000, including \$750,000 for proposed building work at San Francisco State Teachers' College.

Department of Penology—Construction and repairs at the prisons, \$680,000; San Quentin receiving \$360,000 and balance going for improvements at Folsom.

FRESNO, Fresno Co., Cal.—City council has appropriated \$3000 to finance erection of grading at the northwest section of the airport and for fencing fronting the hangars. H. S. Foster is city clerk.

SAN MATEO COUNTY, Cal.—City Planning Boards of Burlingame, San Mateo and Hillsborough are considering a proposal to finance construction of a \$1,500,000 tri-city waterfront playground from Coyote Point to Broadway, Burlingame, and east from the Southern Pacific tracks to San Francisco Bay. The plans provide for a bathing beach, breakwater and yacht harbor and a golf links.

BURLINGAME, San Mateo Co., Cal.—City Purchasing Agent Frank Bloom authorized by city council to purchase a time clock for installation on the Burlingame Neon signs.

SAN FRANCISCO.—Until September 22, 8 P. M., bids will be received by Frank T. Kennedy, secretary, Fire Commission, 2 City Hall, for drydock-ing and repairing fireboats "Dennis T. Sullivan" and "David Scannell." Spec. and further information obtainable from secretary.

20460—Hardwood Charcoal. Culiacan, Mexico. Exporter of charcoal made of hard woods desires to communicate with brokers and consumers of this commodity.

National Electric Corp., 1810 Benedum-Trees Bldg., Pittsburgh, Pa., (R. C. Montgomery, president), desires to get in touch with companies or individuals calling on builders, contractors and mantle and tile companies, to handle an electric wall heater.

James A. Ratchford, 428 South Salina St., Syracuse, N. Y., wishes to communicate with some engineering or mercantile firm of merit desirous of making connections in Central New York or who now has such connections and requires the services of a firm to act as a district manager.

Goodman Manufacturing Co., Halsted St. and 48th Place, Chicago, Ill., (Attention A. M. Grasse), manufacturing mining machinery and electric locomotives, seeks a connection with business and manufacturing firms in this city to handle their manufacturing in the East. They are in a position to offer excellent manufacturing facilities for complete machinery weighing from 500 pounds to 50 tons, and could also produce heavy parts for manufacturers who might wish to ship the lighter operating parts and have the entire equipment assembled there.

PAVING BRICK ON IRON BASE FOR ILLINOIS

Three different designs of brick paving with a sheet-iron base will receive their first test in 150 ft. of pavement on the Grand Ave. connection with the Rochester Road near Springfield, Ill., a contract for which has just been awarded, says Engineering News-Record. The road will have a carefully rolled and leveled subgrade on which the iron base will be laid. Next will follow a mastic sand cushion upon which will be placed a layer of 2½- or 3-in. brick with asphaltic filler. Three 50-ft. sections will be laid with the iron base, one using blue annealed flat sheets, the two others galvanized corrugated sheets, in one case with corrugations parallel to the road and in the other transversely. The flat iron base will be ¼ inch thick, while the corrugated iron will be 10 gage. Expansion and contraction in the flat iron section will be provided for by overlapping sheets along the center line. One transverse edge will be turned down to grip the roadway, while the other edge, lying transverse to the road, will be supported upon the adjoining plate section to provide free movement. The ends of the plates at the edge of the pavement will be turned up to form retaining walls for the paving material.

In the section where corrugated galvanized sheets run parallel to the highway, the outer edges will be turned up as in the flat iron section, while one edge of each other sheet will be turned down to grip the roadway. Sheets will be lapped one corrugation, with a T-bar used under each transverse joint. Where the corrugations run transversely, a 16-ft. 8-in. L-section will be welded along the outer edge to retain the brick, while the sheet ends along the center line will be laid on a T-bar. One transverse edge of each sheet will be turned down to grip the roadway, while the other edge will lap no the adjoining section.

DREDGING, HARBOR WORKS & EXCAVATIONS

PORTLAND, Ore.—Until October 16 3 P. M., bids will be received by U. S. Engineer Office, 321 Customhouse, Portland, for repair and extension of jetty at entrance to Tillamook Bay and for furnishing stone in connection with the project. Specifications obtainable from above.

BERKELEY, Alameda Co., Cal.—See "Wharves and Docks" this issue. Plans awarded for improvement of Berkeley waterfront, including dredging, construction of wharves, slips, etc.

IRRIGATION PROJECTS

TURLOCK, Stanislaus Co., Cal.—Until October 6, 4 P. M., bids will be received by Anna Sorensen, secretary, Turlock Irrigation District, for improvements under ten schedules, involving:

- (a) 933,000 sq. ft. 2-in. thick canal lining;
- (b) 620 cu. yds. concrete in canal structures;
- (c) 5,000 lin. ft. 30- and 36-in. dia. concrete pipe.

All above work located in Improvement Districts Nos. 10, 34, 38, 41, 45, 58 and 53 and Lateral Lower No. 7. Certified check 5% payable to Turlock Irrigation District required with bid. Plans obtainable from R. V. Meikle, chief engineer of the district, and on file in office of the secretary.

TERRA BELLA, Tulare Co., Cal.—Until October 7, 11 a. m., bids will be received by Edward H. Robinson, secretary, Terra Bella Irrigation District, for cleaning and covering with a protective coating, the inside of the district's 8,000 barrel stand pipe, 5 miles east of Terra Bella and approximately 20,000 feet of 26-in. to 30-in. riveted pipe, which is laid in the ground with approx. 18-in. of covering. The pipe line is located from about 1½ miles east of Terra Bella to a point about 1 mile north and 1½ mile west of Terra Bella. Certified check 5% payable to district required with bid. Separate bids are desired for the tank work and the pipe line. Further information is obtainable from the secretary.

STREET LIGHTING SYSTEMS

OAKLAND, Cal.—Butte Electric & Manufacturing Co., 556 Folsom St., San Francisco, at \$24,432 submitted low bid to city council to install ornamental street lighting system in East 12th St., bet. Lake Shore Ave. and 12th Ave., involving 77 ornamental duplex standards together with underground system. 1911 Act. Complete list of bids follows:

Butte E. & M. Co.....	\$24,432
City Imp. Co., Berkeley.....	26,700
R. Flatland, San Francisco.....	26,952
McPage-McKenney Co., Oakland.....	27,675
H. C. Reid Co., San Francisco.....	28,450
T. L. Rosenberg, Oakland.....	32,825

All bids taken under advisement.

Walter N. Frickstad, city engineer.

SAN RAFAEL, Marin Co., Cal.—City council declares intention (543) to install ornamental street lighting system together with underground system in Fourth St. from E St. to point 77-ft. west of H St., involving 24 Westinghouse M 111 on 15 trustee standards. 1911 Act. Bond Act 1915. Hearing October 6. Herbert K. Brainerd, city manager. Eugene W. Smith, city clerk.

PETALUMA, Sonoma Co., Cal.—Property owners in Western Avenue between Main and Keller streets, contemplate installation of a modern electrolier system. Gladys V. Roberts, city clerk.

SAN LEANDRO, Alameda Co., Cal.—City council plans immediate installation of a modern lighting system in Dutton Ave. bet. E 14th St. and Kennelworth Ave. W. A. Richmond, city manager.

MACHINERY AND EQUIPMENT

SACRAMENTO, Cal.—Until Sept. 29 5 P. M. bids will be received by C. Hughes, secretary, Board of Education, Administration Bldg., 21st and L Sts., to furnish and install vocational training equipment for school department.

Certified check 10% required with bid. Specifications obtainable from Business Manager of the Board of Education at the above address.

MARYSVILLE, Yuba Co., Cal.—Until September 23, 7:30 P. M., bids will be received by C. L. Bowen, clerk, Marysville Union High School District

to furnish and deliver one Ford motor truck. Further information obtainable from clerk.

CASTROVILLE, Monterey Co., Cal.—Until September 29, 8 P. M., bids will be received by J. P. Gambetta, clerk, Castroville Union School Dist., to furnish school bus; 4 or more cylinder; 4-speed transmission; 4-wheel brakes; dual rear; seating 50 to 60 pupils and driver; glass 4-inch plate, all around body. Further information obtainable from clerk.

RAILROADS

LAS VEGAS, Nevada—Merritt, Chapman and Scott Corp., P. O. Box 607, San Pedro, awarded contract by Union Pacific System, Pacific Electric Bldg., Los Angeles, for grading, trestles and culverts for the 22-mile branch line to be built from a point on the main line of the Union Pacific, 7 miles south of Las Vegas, to Summit, the designation given the junction of the Union Pacific branch line and the 7-mile line to be built by the government to the main construction center of the Boulder Dam project on the Colorado River. The work will involve 218,000 cu. yds. of common excavation, 22,400 cu. yds. of loose rock, 64,600 cu. yds. of solid rock, 36 pile trestles, 6 frame trestles and 62 corr. iron pipe culverts. Materials for the trestles and culverts will be supplied by the Union Pacific. Time required for completion is six months with work to start on or about October 1. Junction of the branch and main lines is 327 miles from Los Angeles. Under the initial Boulder Dam appropriation of \$10,660,000 the government has allocated \$2,500,000 to provide rail facilities, \$900,000 for the Union Pacific branch line and switching track at Summit and \$1,660,000 for the 7-mile government line to the dam site. Work on the government line will probably not be started until completion of the Union Pacific branch.

McAVOY, Contra Costa Co., Cal.—Hutchinson Co., 1450 Harrison St., Oakland, at \$3167 awarded contract by Southern Pacific R. R. for grading 6500-ft. of standard gauge r.r. track at McAvoy Station to connect S. P. San Aquilino Valley line with plant of Shell Chemical Co., now in course of construction.

WASHINGTON STATE—Examiners of the Interstate Commerce Commission have recommended that the Northern Pacific Railroad and the Oregon-Washington Railroad & Navigation Co. be authorized to construct a branch line from Mocpils to a point on the Hoh River, 6 miles northeast from Spruce in Grays Harbor and Jefferson counties, Washington, a distance of 57 miles. The examiners also recommend that the Oregon-Washington R. R. be authorized to operate over the Northern Pacific between Hoquiam and Mocpils, Wash.

FIRE EQUIPMENT

WATSONVILLE, Santa Cruz Co., Cal.—Eureka Rubber Co., at \$120 ft. and Pioneer Rubber Co., at \$115 ft., awarded contracts by city council to furnish 400 ft. of fire hose, each bidder to furnish 200 ft.

PIPE LINES, WELLS, ETC.

SACRAMENTO, Cal.—Until September 25, 3 P. M., under Order No. 2247, bids will be received by U. S. Engineer Office, California Frust Bldg., to furnish and deliver Rio Vista, Solano county, 1,004 lin. ft. 14-inch internal diameter, machine-made high pressure concrete irrigation pipe. The sections

of pipe shall be either 24- or 30-in. long; bell and spigot pipe. It shall have a wall thickness of at least 1½ in. and an average weight of at least 70 lbs. per lin. ft. The concrete mixture shall be 3½ aggregate to 1 cement. The aggregate shall consist of 70% fine crushed rock with dust, and 30% best grade clean washed river sand. The sections may be hand made but machine made pipe is preferred. Each section shall be solid and homogeneous throughout and shall stand a hydrostatic pressure of 15 lbs. per square inch.

SEWERS AND SEWAGE DISPOSAL PLANTS

ANTIOCH, Contra Costa Co., Cal.—City Engineer E. L. O'Hara preparing plans for B St., sewer extending 1077 ft. on B St., to provide outlet to the di Piazza Tract, the line to run from 6th to 10 Sts.; estimated cost \$2440.

RENO, Nev.—Until September 22, 5 P. M., bids will be received by J. B. Reese, city clerk, to construct sewer lines in various subdivisions, involving:

- (1) 340 lin. ft. 6-in. pipe;
- (2) 59,000 lin. ft. 8-in. pipe;
- (3) 1,300 lin. ft. 10-in. pipe;
- (4) 145 sewer manholes.

Certified check 10% payable to city required with bid. Plans obtainable from city engineer on payment of \$10, not returnable.

REDWOOD CITY, San Mateo Co., Cal.—Redwood City city council will petition the San Mateo county supervisors to construct a storm sewer system on the west edge of Redwood City to control the winter flood waters from the Redwood Hills. Existing sewers are inadequate to carry away the flood waters. Redwood City property would be included in an assessment district to assist in financing the work, according to tentative agreements.

REDWOOD CITY, San Mateo Co., Cal.—Until October 6, 3 P. M., bids will be received by B. E. Myers, city clerk, to construct storm sewers in El Camino Real, one fronting the Sequoia High School Campus, another at Finger Ave. and a third in the vicinity of Jackson St. Will be 18-in. conc. pipe. Funds from \$55,000 bond issue. Plans obtainable from C. L. Dimmitt, city engineer.

MADERA, Madera Co., Cal.—Until October 1, 3 P. M., bids will be received by Jas. Wakefield, city clerk, to construct extensions to sewer system for which bonds of \$20,000 were recently sold to finance. Andrew M. Jensen, engineer, 68 Post Street, San Francisco. Certified check 10% payable to city required with bid. Plans on file in office of city clerk.

SAN FRANCISCO—T. E. Connolly, 461 Market St., at \$254,317 submitted low bid to Board of Public Works to construct Section K of the College Hill sewer, extending from the Mission viaduct to Valencia and Army Streets. Hanrahan Co. next low at \$256,123. Complete list of bids will be published tomorrow. Project involves:

- 4,319 lin. ft. 48-ft. 6-in. reinf. conc. tunnel;
- 1,508 lin. ft. 48-ft. reinf. conc. sewer;
- 318 lin. ft. 3-ft. 6-in. x 5-ft. 3-in. reinf. conc. sewer;
- 315 lin. ft. 6-ft. circular reinf. conc. sewer;
- 75 lin. ft. 18-in. V.C.P. sewer;
- Reinforced concrete junction struc. at 29th and San Jose Ave.;
- Reinforced concrete junction struc. at San Jose Ave. and Army St.;
- Reinforced concrete junction struc. at Valencia and Army Sts.;

- 7 brick or conc. manholes complete on conc. sewers,
- 3,800 lin. ft. 7-in. V.C.P. underdrain covered with conc. or imbedded in broken rock;
- 1,900 lin. ft. 8-in. do;
- 500 lin. ft. 10-in. do;
- 300 lin. ft. 12-in. do.

WATER WORKS

ANACORTES, Wash.—Puget Sound Machinery Depot, Seattle, submitted low bid to city council to construct 16-in. pipe, 16 miles in length, in connection with municipal water system. A complete list of the bids follows:

- Puget Sound Machinery Depot, Seattle, (a) all-steel line, \$459,927; (b) alternate bid for steel with exception of 3,000 ft. of 24-in. wood pipe, \$459,471.
- Chastain and Dorsey, Bellingham, Wash., (a) \$491,396; (b) \$492,490.
- Hans Pederson, Seattle, Wash., (a) \$493,031; (b) \$493,791.
- General Const. Co., Seattle, (a) \$496,164; (b) \$497,076.
- J. H. Coyne, Port Angeles, (a) \$515,636; (b) \$516,852.
- Rowland Const. Co., Seattle, (a) \$518,638; (b) \$519,550.

SEATTLE, Wash.—Bids will be asked shortly by Board of Public Works to construct pipe line and reservoirs in connection with water system; estimated cost, \$2,000,000, of which \$650,000 will finance construction of new reservoir for West Seattle section to replace present pumping system. The reservoir is to be built at First Ave. south and Cloverdale St.; a 48-inch main will be used with this system. The pipe line planned for the city will run from the control works at Lake Youngs to Seattle where it will connect with the main supply line at 51st Ave. south and Leo St. The main will be 66 inches in diameter. Wm. B. Severns is superintendent of the Municipal Water Department.

SAN FRANCISCO—Enterprise Foundry Co., 2902 19th St., at \$9,04875 lb. awarded contract by Board of Supervisors to furnish and deliver c. l. pipe fittings for S. F. Water Department as may be required from time to time during fiscal year 1930-31.

SANTA BARBARA, Cal.—The city water commission has recommended to the city council that a \$2,100,000 water bond issue be called to provide funds for improvements to the city water system. The work proposed, as recommended by Quinton, Code and Hill, consulting engineers, includes:

Raising the present Gibraltar Dam and constructing new rock fill dam within a period of five years, \$2,000,000.

Underground water development, \$200,000.

El Cielito and La Mesa Reservoirs with necessary connections, \$30,000.

Repairs to the Sheffield reservoir, \$80,000.

Replacement of 24-in. redwood line, \$60,000.

Tunnel repairs, \$50,000.

Repairs and replacements must be built from earnings, and the commission recommends the items reduced to bring the issue to \$2,100,000.

SAN FRANCISCO—Until October 6, 11 A. M., bids will be received by Constructing Quartermaster, Fort Mason, to construct a 50,000-gallon steel water tank on a 55 ft. trestle at Fort Miles. Present steel water tank and trestle to be taken down by contractor for the new work. Plans and further information obtainable from above.

ANACORTES, Wash.—Puget Sound Machinery Depot, 322 First Avenue south, Seattle, at \$444,392 (revised bid due to changes in specifications),

awarded contract by city council to lay approx. 16 miles of steel pipe line, varying in size from 16- to 24-inches and c. l. pipe from 8- to 10-in.; also construction of intake, pier, screen chamber, pump house, coagulation basin, valve house, chemical house and equalization reservoir. Changes in the specifications eliminate a commercial pipe line running from the filter plant to a terminus within the city. W. C. Morse Co., engineers, Smith Tower, Seattle.

STREETS AND HIGHWAYS

SALINAS, Monterey Co., Calif.—A. Teichert and Sons, 1846 37th Street, Sacramento, awarded contract by county supervisors to crush and stockpile broken stone at Greenfield in Supervisor District No. 3.

PACIFIC GROVE, Monterey Co., Calif.—City council declares intention (3248) to improve 3rd, 7th, 8th, 9th and 10th Sts. between Ocean View and Lighthouse Aves., and 4th St. and 6th St. between Central and Lighthouse Aves., involving cement concrete gutters; old macadam surface with 4-inch crushed rock base, 1911 Act. Bond Act 1915. Hearing Sept. 18. L. C. Fisher, deputy city clerk.

BUTTE COUNTY, Calif.—Following bids received Sept. 15 by C. H. Whitmore, district engineer, State Highway Commission, Sacramento, for 5.0 miles of pit run gravel borders between north city limits of Chico and north county boundary:

C. Mankel, Sacramento.....	\$1.49; \$4,470
C. A. Howard, Richmond.....	\$1.97 \$5,910
Hemstreet & Bell, Marysville.....	\$2.00 \$6,000
F. J. Chesson, Yuba City.....	\$2.00 \$6,000

STOCKTON, San Joaquin Co., Cal.—Moreing Bros., Savings and Loan Bldg., Stockton at \$10,029 awarded contract by county supervisors to improve Brumel road in the Lockeford district. Engineer's estimate \$11,000.

COLUSA COUNTY, Cal.—Following bids received Sept. 15 by C. H. Whitmore, district engineer, State Highway Commission, Sacramento, for 5.0 miles of pit run gravel borders between 1 mile south of Arbuckle and Geneva:

H. Sykes, Patterson, \$1.55 cu. yd., total.....	\$4,650
Harms Bros., Galt.....	\$1.65 \$4,950
F. J. Chesson, Yuba City.....	\$1.71 \$5,130
C. Mankel, Sacramento.....	\$1.86 \$5,580
Pereira & Reed, Tracy.....	\$2.06 \$6,180
A. Teichert & Sons, Sacramento.....	\$2.24 \$6,720
J. R. Reeves, Sacto.....	\$2.44 \$7,320
Chas. Howard, Richmond.....	\$2.53 \$7,590
Hemstreet & Bell, Marysville.....	\$3.00 \$9,000

EUREKA COUNTY, Nevada.—Bassett Rock Co., Napa, Calif. at \$30,387.94 awarded contract by State Highway Commission to furnish as-

phaltic fuel oil, apply and mix with crushed rock or crushed gravel surface on a portion of the state highway from Hay Branch to Eureka, a distance of 11.65 miles. A. D. Drumm, Jr., Fallon, Nev., only other bidder at \$31,782.40; engineer's estimate, \$36,949.67.

OAKLAND, Alameda Co., Cal.—Hearsey Moore Co., 344 High St., Oakland, at \$4235 awarded contract by City Port Commission, 424 Oakland Bank Bldg., for surface pavement on apron wharf at Ninth Avenue Pier.

YOLO COUNTY, Calif.—Following bids received Sept. 15 by C. H. Whitmore, district engineer, State Highway Commission, Sacramento, for 5.9 miles of pit run gravel borders between Cache Creek and Zamora:

Harms Bros., Galt, \$1.24 cu. yd., total.....	\$4,216
Leroy Kerr, Yolo.....	\$1.22 \$4,488
F. J. Chesson, Yuba City.....	\$1.36 \$4,624
C. Mankel, Sacramento.....	\$1.52 \$5,168
J. R. Reeves, Sacramento.....	\$1.54 \$5,236
C. A. Howard, Richmond.....	\$1.65 \$5,610
A. Teichert & Sons, Sacto.....	\$1.94 \$6,596
Pereira & Reed, Tracy.....	\$1.67 \$6,678
Hemstreet & Bell, Marysville.....	\$1.30 \$7,820
Sheif Const. Co., Oakland.....	\$2.35 \$7,990

MARYSVILLE, Yuba Co., Cal.—A. Teichert and Son, Inc., 1846 37th St., Sacramento, at \$4294.10 awarded contract by county supervisors to place seal coat on road extending from Horstville to and across Wheatland, thence west to a point 1 mile east of the Bear River bridge.

MARYSVILLE, Yuba Co., Cal.—Hemstreet Bell, Marysville, at \$1306.55 awarded contract by county supervisors to place oil surface (road mix) on Main and Second streets in the town of Wheatland.

SANTA ROSA, Sonoma Co., Cal.—Until September 22, 12 noon, bids will be received by Geo. P. Sanborn, county clerk, to grade Lakeville-Sears Point Road, Section "A" in the First Supervisorial District. Project involves:

- (a) \$309 cu. yds. excavation;
- (b) 1100 cu. yds. rock surfacing.

Specifications on file in office of clerk and obtainable from County Surveyor E. A. Peugh at Santa Rosa.

STOCKTON, San Joaquin Co., Cal.—Until Sept. 29, 11 A. M., bids will be received by Eugene D. Graham, county clerk, to pave Lower Sacramento Road from Acampo to Forest Lake on that portion of the San Joaquin County Highway system in Road District No. 2.

Certified check 10% payable to the Chairman of the Board of Supervisors required with bid. Plans obtainable from Julius Manthey, county surveyor, at Stockton.

OROVILLE, Butte Co., Cal.—Until October 6, 1:30 P. M., bids will be received by C. F. Belding, county clerk, for grading one-half mile of the Oroville-Pentz-Magalla bond highway between Lockerman's Place and the Parish House Camp.

Specifications obtainable from County Road Engineer J. A. Baumgarner at Oroville.

LANDER CO., Cal.—Until September 24, 2 P. M., bids will be received by State Highway Commission, Carson City, to grade, construct structures and place selected surface material on 11.70 miles from town of Austin to point 12 miles east. Certified check 5% required with bid. Plans on file in office of U. S. Bureau of Roads, 461 Market St., San Francisco, and obtainable from S. C. Durkee, state highway engineer at Carson City, on deposit of \$15, of which \$10 is returnable.

OROVILLE, Butte Co., Cal.—Until October 6, 1:30 P. M., bids will be received by C. F. Belding, county clerk, for grading the La Porte road from the Farrington Ranch to the Turner Ranch, west of Bangor. Specifications obtainable from County Road Engineer J. A. Baumgarner at Oroville.

STOCKTON, San Joaquin Co., Cal.—Until Sept. 29, 11 A. M., bids will be received by Eugene D. Graham, county clerk, to improve subdivision road in the vicinity of Stockton on that portion of the San Joaquin Highway System in Road District No. 1, involving approximately 40 miles of graveling and oiling.

Certified check 10% payable to the Chairman of the Board of Supervisors required with bid. Plans obtainable from Julius Manthey, county surveyor, at Stockton.

SANTA BARBARA COUNTY, Cal.—Until Oct. 8, 2 p. m., bids will be received by State Highway Commission to grade and pave with Portland cement concrete, 0.6-mile about 1/2-mile north of Santa Maria.

See call for bids under official proposal section in this issue.

SAN BERNARDINO COUNTY, Cal.—Until Oct. 8, 2 p. m., bids will be received by State Highway Commission to pave with Portland cement concrete, 0.3-mile at Malaga street.

See call for bids under official proposal section in this issue.

MARYSVILLE, Yuba Co., Cal.—Until Sept. 22, 8 p. m., bids will be received by Chester O. Gates, city clerk, (38) to improve 12th St. bet. B and Chestnut Sts.; E St. bet. 4th and 5th Sts.; E St. bet. 5th and 6th, and E St. from 16th to 17th Sts., involving removal of concrete curbs and sprinkler system and trees; grading pave with 2 1/2-in. asph. conc. base and 1 1/2-in. asph. conc. surface; construct concrete curbs and gutters, 1911 Act. Bond Act 1915. Plans on file in office of clerk and obtainable from city engineer.

KING CITY, Monterey Co., Calif.—A. J. Raisch, 46 Kearny St., San Francisco, only bidder at \$4,060.81 awarded contract by city trustees (6) to improve portions of First St., involving grading; hyd. concrete curbs; 5-inch hyd. cem. conc. pavement.

SACRAMENTO, Cal.—The state department of public works, B. B. Meek director, has announced that approximately \$63,250,000 will be carried in the department's budget for road work in California during the coming biennium.

SAN FRANCISCO—W. J. Tohn, 527 Balfour Ave., Oakland, at \$3,757 submitted low bid to Board of Public Works to improve 25th St. bet. Fountain and Burnham Sts., including crossing at Fountain St., involving grading; armored concrete curbs; one-course concrete sidewalks; br. catch-basins; 12-in. vit. pipe sewers; vit. clay pipe side sewers; 6-in. class E conc. pave. with 2-in. asph. concrete surface and 6-in. class F base pave. E. J. Treacy next low at \$3,767.

SAN FRANCISCO—California Construction Co., Standard Oil Bldg., at \$97,890 submitted low bid to Board of Public Works to construct Section 1) of the Sunset Blvd. from Noriega to Irving Street. Next three low bidders were: Meyer Rosenberg, \$104,995; J. M. Smith, \$107,539; Charles Harney, \$109,242. A complete list of bids will be published tomorrow. Project involves:

133,600 cu. yds. excavation;
61,700 cu. yds. imported borrow;
192,900 sq. ft. asph. macadam pave.;
2 1/2-in. asph. conc. surface on 10-inch waterbound macadam base.
38,600 sq. ft. asph. conc. pave., 2-in. asph. conc. surf. and 6-in. class F conc. base;
242 tons of asph. conc. conform pave.;
90,700 sq. ft. 4-in. waterbound macadam pavement;
46,700 sq. ft. 6-in. do;
13,560 sq. ft. 1-course conc. sidewalks;
13,400 lin. ft. unarmored conc. curb;
470 lin. ft. 2x6-in. redwood header;
240 lin. ft. 18-in. V.C.P. sewer;
240 lin. ft. 15-in. do;
120 lin. ft. 12-in. do;
570 lin. ft. 10-in. do;
5 brick manholes;
650 lin. ft. 3-in. black pipe conduit;
2,100 lin. ft. 1 1/2-in. black pipe conduit;
Eight 9-unit yellow reflectors mounted on 2 1/2-inch standard wrought iron pipe posts;
2 "Keep-to-the-right" signs;
920 cu. yds. loam;
1,860 cu. yds. manure;
3 tons of hay for slope protection.

SACRAMENTO, Cal.—Clark & Henry Const. Co., Chancery Bldg., San Francisco, at \$5,499 submitted low bid to supervisors to construct concrete shoulders in Marconi Ave. in North Sacramento district.

SAN FRANCISCO—Until October 1 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve San Mateo Ave. between San Diego and Niantic Aves. (where not), involving armored concrete curbs; 6-in. vit. clay pipe side sewers; 2-in. asph. conc. surface pave. on 6-in. class F conc. base. Estimated cost, \$800.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

SAN FRANCISCO—Until October 1 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve the uncompleted portions of 26th Ave. bet. Ortega and Pacheco Sts.; 41st Ave. bet. Noriega and Ortega Sts.; 44th Ave. bet. Noriega and Ortega Sts., etc., involving armored concrete curbs; side sewers; 6-in. conc. base pavement with 1 1/2-in. asph. conc. surface. Est. cost \$6,000.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

AMADOR COUNTY, Cal.—Following three low bids received Sept. 17 by State Highway Commission to grade and surface with untreated crushed gravel or stone, 13 miles between Amador City and Marietta: V. Gledits Bros., San Diego, \$149,461; E. C. Coates, Sacramento, \$152,103; Centoules Constr. Co., S. F., \$152,983. Bids held under advisement.

SANTA BARBARA COUNTY, Calif.—As previously reported, bids will be received Oct. 8 by State Highway Commission to grade and pave 0.5-mile about 1/4-mile north of Santa Maria. Project involves: 4000 cu. yds. roadway excav.; 11,000 sta. yds. overhaul; 450 cu. yds. struc. excav.; 160 cu. yds. remove concrete; 6800 sq. yds. subgrade; 1520 cu. yds. A conc. (paving and struc.); 34,000 lbs. reinf. steel; 88 ft. 30-in. corr. pipe; 100 ft. timber guard rail; 44 tons cutback asph. road oil; .55 mile new property fence; 32 sta. finish roadway; 8 monuments.

SANTA BARBARA COUNTY, Calif.—As previously reported, bids will be received Oct. 8 by State Highway Commission to grade and pave 0.3-mile at Malaga St. Project involves: 3000 cu. yds. rdwy. excav.; 820 cu. yds. struc. excav.; 7600 sq. yds. subgrade; 1600 cu. yds. A conc. (paving); 50 cu. yds. A conc. (struc.); 450 cu. yds. A conc. (slope paving); 320 cu. yds. A conc. (curbs, walls, etc.); 7676 lbs. reinf. steel; 63 ft. 18-in. reinf. conc. pipe; 120 ft. 8-in. corr. pipe; 30 ft. 18-in. do; 17 sta. finish rdwy.; 1 pumping equipment; 7 monuments.

SAN FRANCISCO—Until October 1 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to construct sidewalks and walls in Grand View Ave. bet. north and south intersections with Market St. Est. cost \$6,000.

Certified check 10% payable to the Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

CLOVERDALE, Sonoma Co., Cal.—City Engineer A. M. Jensen, 68 Post St., San Francisco, preparing specifications to pave certain areas in the residential district; estimated cost \$4,000.

SAN FRANCISCO—Until October 1 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to remove sand from roadway and sidewalk and construct bulkhead 3-ft. high in south side of Trumbull St. 250-ft. east of Crant St. Est. cost \$400.

Certified check 10% payable to the Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

OFFICIAL PROPOSALS

ADVERTISEMENT FOR BIDS

Subject to conditions prescribed by the undersigned, sealed bids are invited for the General Construction of the Engineering Group (Engineering Building, Engineering Laboratory Building and Hesse Hall Addition) on the grounds of the University of California, Berkeley, California. No bids received after 11:00 A. M. Monday, October 6, 1930. The right to reject any and all bids is reserved. For full information apply to Cashier's Window, California Hall, University of California, Berkeley. A deposit of \$500 is required for each set of Drawings and Specifications.

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M. on October 8, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

Santa Barbara County, about one-half mile north of Santa Maria (V-S. B-2-A), about six-tenths (0.6) mile in length, to be graded and paved with Portland cement concrete.

San Bernardino County, at Malaga Street (VII-SB-5-A), about three-tenths (0.3) mile in length, to be paved with Portland cement concrete.

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a Contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino, and Bishop.

A representative from the district office will be available to accompany

prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS
C. H. PURCELL,
State Highway Engineer.

Dated Sept. 10, 1930.

HEATING-VENTILATING BUREAU PROPOSED FOR CITY OF PORTLAND, ORE.

Provision for a heating and ventilating division of the Portland, Ore., city bureau of buildings to handle the inspection of furnace installations is sought by H. E. Plummer, chief of the building bureau, in response to requests from furnace men that rigid inspection be provided by the city.

In a letter to Commissioner Barbur, Plummer pointed out that the fees from the division would finance the inspection and that W. A. Trout, who has been doing the work, has been unable to keep up with the installations. Trout may head the new division.

Plans of the furnace men, now that the city has specified that furnaces must be large enough to heat the houses they are installed to heat, plan to extend the ordinance to take in hot water, steam, sawdust burners and other heating equipment.

In his letter Plummer said that from February to August, inclusive, the city has issued 949 furnace permits of a value of \$235,150 and received fees amounting to \$2,444.50. So far only 486 of the installations have been inspected. He estimated that in the next three months there will be 1175 furnace installations and that three inspectors will be necessary to handle the work. The income will be about \$2700 and the expenses would be about \$2205.

In the budget for next year an item of \$8220 was asked to provide for the new division throughout the year. Plummer also suggested that the smoke prevention work be assigned to the new division.

DIRECT TAX PROBABLE FOR BERKELEY SCHOOLS

Probability that the direct tax plan of financing school improvements will be submitted to the voters of Berkeley at either the general election in November or at the city election next spring was indicated at the last meeting of the Berkeley Board of Education.

With the proposal to vote bonds three times defeated, civic leaders propose to secure funds for new schools and additions to the standing school structures via the direct tax method. An increase in the school tax from 30 to 50 cents, it is estimated would provide \$450,000 every year for school building purposes—one \$300,000 high school unit and two \$75,000 elementary units.

MCDONALD AND MAGGORIO WIN MILL VALLEY STREET CONTRACT

MILL VALLEY, Marin Co., Cal.—McDonald and Maggorio, Sausalito, at \$89,677.90 awarded contract by town trustees under Resolution of Intention No. 755, to improve portions of Summit Ave., etc. A complete tabulation of the bids follows:

Construction costs in the United States during August were lower than at any time in the past two years and indications are that they have reached their bottom level for the general readjustment period, according to a statistical analysis just completed by the Associated General Contractors of America.

The average of construction costs in the principal construction centers of the country in August showed a decline for the fifth consecutive month, dropping to index number 198.4, or 3/5 of a point below July and 4.6 points below that for the corresponding period a year ago, the chart of the association shows.

Taking a line through the cost trends following the general business recessions of 1924 and 1927, when average construction costs declined 5 and 4 points, respectively, and which are closely paralleled by the present trend, Edward J. Harding, assistant general manager of the Associated General Contractors, states that any further downward movement is hardly to be expected.

Mr. Harding points out that following the general recession in 1927 construction costs gradually decreased 4 points in five months, and that also following the depression in 1924 they declined 5 points in a period of three months to the low levels of those periods. In both instances the index reached its low figure within a year from the low point in general business, which in the present cycle is believed to have been in December of last year.

The cost of construction has varied but little in the last seven years, Mr. Harding states, as the upward trend of the cost of labor in general has been just about offset by the downward trend of the cost of material. During the current year the index number for labor wages has remained stationary at 232, the charts show, while the index for basic material prices has declined 8 points in the last five months to 176.

In both the previous recessions cited wages were a factor in reduced construction costs, whereas in the present movement they have played no

part, having been maintained at their highest levels, Mr. Harding states. Material prices, however, are at a lower level than at any time in the past four years and as costs have apparently hit bottom, the present is a particularly advantageous time for economical construction, he believes.

Complete success of the program of the Associated General Contractors of America to eliminate unsound practices in the writing of surety bonds finally has been achieved and is redounding to the inestimable benefit of the industry, according to a report to be made to the executive board of the association at its fall meeting, October 6, 7 and 8, at Rye, New York.

The actual accomplishments in the program are such as to indicate that this problem has been practically solved through the agency of the Surety Division of the Affiliated Bureaus of the association, Edward J. Harding, assistant general manager, declared in commenting upon the report.

The extent of the investigation which surety companies made of applicants for bonds was a matter of issue between responsible contractors and the surety companies for some years, he pointed out, but through the repeated representations of the Associated General Contractors member companies of the Surety Association of America finally agreed to co-operate with the A. G. C. for the improvement of bond writing practices and the development of better procedure in the industry generally.

"For carrying out this work the Surety Division of the Affiliated Bureaus of the Associated General Contractors was formed and is now instrumental in promoting ethical and business-like practices governing relations between surety bond writers and contractors," he said.

"A report to this bureau of the efforts of surety agents to inject irresponsible contractors into business,

of the existence of rebate agreements between agents and contractors, of cut-rate offers on bonds, of the payment of any commissions to individuals or organizations that are not regularly engaged in the business of writing surety bonds or insurance policies as the principal means of livelihood, or any other unethical or discriminatory practice will secure prompt attention and will be corrected through the joint efforts of the Associated General Contractors and the surety companies," he said.

Adding nearly \$1,000,000 to its 1930 dollar volume in one sale, the Home Construction Division of Sears, Roebuck & Co. has agreed to sell 100 of its standardized dwellings to Brady, Cryan & Collieran, Inc., promoters of Massapequa Park, Long Island, says The Business Week.

The transaction reflects some marked departures from presumably ironclad policies.

To prevent ready identification as "another one of those Sears, Roebuck houses," roofs and exteriors will be finished differently than specified in catalogue, stucco side walls substituted for clapboard, brick veneer for stucco. Interior arrangements will remain substantially unchanged.

Sales resistance is further reduced through a new finance plan so that for instance the "Strathmore" home, priced at \$4995, can be bought for \$995 down. Sears, Roebuck carries a mortgage for \$7700, the promoters taking a second mortgage for \$800 on which they promise a substantial discount if cash is paid at time of settlement. Monthly payments of \$65.91 will amortize the Sears mortgage in 15 years including all interest charges.

All construction material except lighting fixtures will be furnished by Sears, Roebuck & Co., while actual erection of houses is in charge of Massapequa Construction Co., offspring of the promoters.

A "Pittsburg" Automatic Water Heater installed in the Home indicates high quality throughout.

Recommended and specified by all the leading architects, plumbers and builders.

Consider the high merit of the Pittsburg coupled with "Pittsburg Perfect Service."

"Hot water quick as a wink."

STATE COMPLETES STUDY OF SACTO AND SAN JOAQUIN RIVERS

Five years of study of the Sacramento and San Joaquin Rivers are covered with a bulletin issued by the State Division of Water Resources. The report covers engineering investigations, measurements of diversion and return waters, conservation, waste prevention, and the administration of stream flow.

The diversion undertook the study in the dry season of 1924 and the work was supported the first year by voluntary subscription of the persons in the territory affected. Since 1925, however, the studies have been financed by state appropriation.

The report of the run-off and water supply conditions for the years 1924 to 1928, inclusive, shows that the season of 1927 was above normal but 1924 and 1926 were especially dry. The season of 1928 was about 75 per cent of normal and compared closely with 1925 but was not marked by the difficulty to navigation experienced in that year.

There was no serious shortage of water for irrigation purposes in 1928 and salinity to the extent of 100 parts of chlorine per 100,000 parts of water did not reach higher in the delta than Twitwell, Webb, and the Jersey Islands.

A comparison of return flows in the two major drainage basins indicates that the average percentage of diversions occurring as return water in the San Joaquin River is considerably smaller than that for the Sacramento River. This is due largely, the report says, to differences in topography which allow rapid return of drainage waters to the Sacramento River, but drainage from foothill diversions in the San Joaquin Valley passes to the underground flow and may be pumped from there for reuse in irrigation. Much of the San Joaquin return water, it is stated, never reaches the river to be accounted for in the division's measurements.

A complete census of the acreages and crops irrigated in the delta region has been secured as well as information on the period of irrigation for various crops and a general soil classification of the areas. Through the information obtained in the five years of study and the increased confidence of the growers affected, the water supervisor expects to be able to initiate on short notice, in case of water shortage, schedules or plans which will provide an equitable and efficient administration of the water supply and prevent serious losses.

The Laughlin method of mechanical sewage treatment is outlined in bulletin A, published by the Filtration Equipment Corp., 350 Madison Ave., New York City.

CONTRACTOR FINED AT FRESNO ON STATE LICENSE VIOLATION

Found guilty of violating the state contractor's license law, Dave Wells was fined \$25 last Tuesday at Fresno by Police Judge J. G. Crichton. Trial of the case was in the nature of a test.

Keith Carlin, attorney for the state department of professional vocational standards, was associated with Herbert P. Briggs, of the district attorney's office, in prosecuting Wells and Arthur Pangburn, special investigator for the department, was one of the principal witnesses.

The state introduced evidence to show that Wells obtained a plastering contract on the Tranquility Union High School on a bid entered as an individual, while his only license to contract was as a partner of Jacob Stuckert. Stuckert admitted on the witness stand that he, too, entered a bid for the work sought by Wells, although both maintained that their bids were entered "for the benefits of the partnership."

In handing down his decision Judge Crichton declared that people hiring contractors and contractors sub-letting work are entitled to protection as to the responsibility of those seeking to do the work and that Wells evaded the license law by not making known to those from whom he sought work that he had no individual license.

Carlin argued that Wells had not applied for an individual license until after he "was in a jam" with the state department and three Fresno contractors testified that they accepted bids from Wells not knowing that his only license to do business was as a partner of Stuckert.

Wells submitted the low bid on the Tranquility job but later declined to do the work, according to Roy Martin, the general contractor.

ELECTRICAL GUILD OF NORTH AMERICA ORGANIZED

Organization of the Electrical Guild of North America by sixty-three firms engaged in electrical construction in nineteen cities, to "modernize and stabilize the industry, is announced in The Business Week.

The guild will promote industrial co-operation "on a scale hitherto unknown and untried" by the prevention of strikes and lockouts "through open understandings with union labor" and an active co-operation with the International Brotherhood of Electrical Workers. A research bureau is to be opened in Washington to work for the stabilization and development of the electrical construction industry and the adjustment of difficulties between employer and employee through the Council on Industrial Relations. L. K. Comstock, who heads the Council on Industrial Relations, is president of the new organization.

EMPLOYMENT PLAN OF CEMENT INTERESTS LAUDED BY EXECUTIVES

Secretary of Labor James L. Davis has voiced his strong approval of the nation-wide employment service established by the cement industry to retain its trained workers and to solve its own employment problems.

This approbation was given in a letter to Wm. M. Kinney, general manager of the Portland Cement Association, who is in charge of the clearing house through which the cement industry is endeavoring to prevent the loss of skilled employees.

"I am confident that your plan will be very helpful," writes Secretary Davis. "Because it will retain the skilled and experienced worker within the industry. Both you and I know that as soon as business picks up you will need the services of all these men. It is beneficial to the company also to retain them according to your plan."

Senator Robert F. Wagner of New York also expressed his approval of the cement industry's effort, as did Assistant Secretary of Commerce Julius Klein, and William Butterworth, president of the United States Chamber of Commerce.

Senator Wagner said: "Anything to my mind which shortens the waiting time between the loss of one job and the discovery of another promotes efficiency of the industry and the welfare of the worker."

Mr. Butterworth declared "There has long been need for efficiently operated employment bureaus to facilitate the employment of industrial personnel. Your association is to be commended for its enterprise in attempting to fulfill this need." Mr. Klein expressed the opinion "that service of this kind will react favorably to everyone concerned."

Mr. Kinney explained that cement companies which have no positions open are referring their applicants to the association, which is also notified of openings in other companies. He said that trained men are one of the greatest assets of the cement industry and that the industry wishes to keep them for its own sake, as well as for the sake of the worker.

Five days a week on all city contracts has received the approval of the San Francisco supervisors in unanimously adopting a resolution calling upon the Board of Public Works to take up the matter with all firms now doing work for the city.

The short work week was urged to lessen unemployment. Many men are now engaged on city jobs. New boulevards, sewers, street grading and sand removal, new schoolhouses and other structures are underway.

The resolution was approved by the Board of Public Works. President Timothy A. Reardon states a number of additional men could be put to work under the plan.

AMERICAN CITIES TODAY UNTHINKABLE WITHOUT TALL BUILDINGS, SAYS COL. STARRETT

(By Col. W. A. Starrett, President, Starrett Corporation)

Building is the expression of our national genius for the progressive creation of wealth, and the most characteristic, all-American thing in the world is the great metropolitan skyscraper. Those of us who are engaged in building as a profession find in an absorbing occupation, for the skyscraper has grown out of our national genius for devising the most efficient implements for the accommodation of our complicated, modern metropolitan life.

But first let me say something of how these great buildings came into being and what lies behind the scenes of one of these fascinating dramas of construction that suddenly start on our busiest corners amid the swirl of congested traffic and, as if by magic, in a few short months, grow before our very eyes into the great modern marvels of convenience and beauty that we know.

The incentive behind a skyscraper is the creation of new wealth. A centrally located piece of property, either vacant or encumbered with obsolete structures, has become so valuable that the owner finds it uneconomical and naturally desires to put the land to its most productive use. Moreover, mounting taxes and diminishing income force the consideration of a tall building of some sort. The science of realty values is here involved, but, admitting the dictum that intensively valuable metropolitan land is worth what it can be made to earn, we have the sound basis upon which the contemplated improvement is to be considered. Not always is the original owner the one who realizes or senses the potential possibilities of a piece of metropolitan property. In many cases, it is the adroit specialist in real estate values who arranges to purchase the land, and at the same time plans its immediate improvement with a new and more adequate structure.

Economic Necessity

So we see the skyscraper rising out of an economic necessity and, in this great business of building them, we see that careful analysis and wise planning are the forerunners of the building operations that so suddenly appear. The great profession of architecture, highly developed and specialized in our large cities, comes into play and we find the owner and architect and builder in conference as to the possibilities of the plot under consideration. Sketches are made—"space studies"—they are sometimes called—and from these the owner or prospective purchaser determines the nature and extent of the contemplated improvement. The expert and well-organized builder advises on the approximate cost of the improvement, for the builder is the one who knows costs and the ways and means by which the structure is to be brought into being in the shortest possible time and within the budget that the improvement demands. For now we are dealing in millions, and it must be borne in mind that, during construction, the land is earning nothing, while the capital invested is drawing interest, items that have a major bearing when the finances of the operation are being weighed. Also, the renting agent is an indispensable factor,

(Address of Col. Starrett, who as a guest speaker on the Halsey, Stuart & Co. Radio Program, September 10, 1930, over a Coast to Coast network of the National Broadcasting Company and associated stations.)

for, unless the owner has in advance a tenant for his structure, expert advice is needed on the subject of renting.

Costs Determined

From the sketches, the size, height, and general character of the building are determined, as well as design or exterior appearance. Also, if the examination of the problem is complete, the builder's budget is constructed, based upon the sketches, for, as has been said, it is the builder who knows costs and is in the best position to advise the owner on this important aspect of his problem. From the sketches, the next important development is the working drawings, and it is here that the combined forethought and experience of the architect and builder are brought to the service of the owner with such telling effect.

Foundations, all-important and of first consideration, are designed, not by rule or by guess, but by expert examination of the soil and study of the geological formations of the locality under consideration. Borings

are made and test pits sunk; examinations of engineering records of contiguous foundation structures are considered, for it must be understood that, supplementing the work of the architect, the foundation and structural engineer have been in the conferences, and it is upon their expert advice that the foundations and structural design proceed.

With the foundations determined, including consideration of the complex questions of water exclusion, deep boiler rooms, and perhaps deep safe deposit vaults, the structural frame itself is considered. And now we are launched into the whole intricacy of modern planning. Plumbing, heating, air conditioning and refrigeration, the types of construction best suited to the problem, soundproofing, types of windows, types of elevators, exterior materials and the fitting thereof to the structural frame, banking rooms and their ventilation; all of these and a hundred more considerations press for solution, and particularly, for co-ordination, and this is the work of the architect and builder working together as expert advisers of the owner who is also carrying on the plans of financing, renting, management upon completion, and a hundred other activities all germane to the problem and all interlocked with each other to the end that the property, when completed, shall justify its existence by a substantial financial return to the owner who has staked a fortune upon his judgment that the property will yield an adequate financial return.

Height Arouses Interest

We builders must have a certain amount of vision. We think we sense the trend of these great metropolitan structures. Popular imagination is always avid for our latest big

developments in terms of height, and a large building project is always announced by the number of stories, for the public imagination is always fired by the prospect of a towering height record. If the height is great or some record is to be broken, there is almost feverish public interest in the project. With pride and elation we have built them fifty, sixty, seventy stories, and now the company with which I am connected is building one eighty-five stories high, surmounted by a projected mooring mast for dirigible airships that will be nearly thirteen hundred feet above the street level. That same building will be nearly fifty per cent larger than the largest office building heretofore built—perhaps the crowning effort for years to come of our national genius for building great business structures.

Trend Toward Larger Buildings

Yet, without exaggerating the importance of height, we can vision the tendency and trend of our future building development. Skyscrapers have come to stay and are a part and parcel of our national economic life. American cities today are unthinkable without skyscrapers. Excessive heights may have been attained, but this does not arraign high buildings, and, while the value of great height may be disputed, the fact remains that the trend is toward ever larger buildings. The city block will be the limit of area, and we can safely assume that the economics of these great structures will take care of the height question. An interesting and deeply studied treatise on the problem, entitled "Skyscrapers," by two of the able authorities on the subject, W. C. Clark and J. L. Kingston, sets the economical limit at seventy-five stories. Time will tell as to the correctness of their prophecy, but we are already experiencing the whole-block structure and already the advantages have been proven. One has only to consider the average, heterogeneous city block in such cities as Chicago or New York or Detroit, with ten to twenty unrelated, independent structures, ten to twenty managements, ten to twenty heating plants, ten to twenty sets of elevators and, finally, its utter lack of intercommunication, to realize the economic waste involved. Then consider the magnificent new, whole-block structures, such as 120 Broadway, New York, the General Motors Building in Detroit, the Cleveland Union Terminal, the Carew Tower in Cincinnati, with its unified central heating and elevator service and management, and the reason for the tendency toward bigness is clear. Such properties, when properly placed and ably managed, are magnificent, comparable to the soundest railroads in stability and earning power. They are tremendous public conveniences in their acceleration of business, and play their important part, not only in the creation of sound wealth for their owners, but also in the facilitating of the creative powers and advantages of their occupants and users; for, after all, a great office building is nothing more than a great manufacturing plant where the most useful and valuable, the most creative product in the world, is turned out—

clear thinking and good ideas. Consider the great suites of offices and realize their potentialities in putting into effect the planning and thinking of the brains that direct the vast operations that emanate therefrom. Consider how every facility is made to count; how sanitation, ventilation, motorized equipment, swift elevators and, most important of all, the proximity to other great institutions of like or coordinated activities all play their part. The whole business world is, in a way, interlocked, and important executives must be of easy access to each other, even though they be in different and independent activities. Nothing has been invented to take the place of personal contacts between men important in the world of commerce, industry and finance. The time of these men and these great organizations is valued in thousands of dollars for fractions of seconds. The prime necessity of instant contacts is emphasized and served by the great modern skyscraper.

The same principles, differently applied, govern the question of large metropolitan hotels and apartments. Anything that facilitates quick and convenient personal contacts is of value in our modern scheme of things. This explains the modern American city and, more particularly, explains the skyscraper.

Skyscraper Alleviates Congestion

It is beside the question to point to traffic congestion and crowded sidewalks. The skyscraper, with its myriad conveniences, alleviates city congestion and enables the performance of busy and efficient executive life as no instrumentality devised by man has ever done before.

So we see a reason for the tendency toward ever increasing size up to the limit of city blocks, with the height question taking care of itself in various ways. And with this tendency and the proven soundness of innumerable fine modern structures in our principal cities throughout the land, we must again consider the owner and think of his problems in providing funds to make these needed improvements.

The skyscraper is very young; the first one was the Home Insurance Company building in Chicago, built in 1885, ten stories high, paid for and owned by a great insurance company. It probably cost little more than a half million dollars, both land and building, and was a stupendous event, for it revolutionized building and started the whole modern trend of city building that has made America. From that momentous and courageous beginning, we have developed into the structures of undreamed-of proportions. Ten million dollars for land and building is not uncommon. There are many of that proportion in our principal cities, and fifteen and even twenty million dollar projects cause no great surprise. At first the insurance companies supported these building ventures with cautious, conservative loans, and reluctantly followed the trend of increasing magnitude until loans of one to two millions were frequently made. Still the requirements were not met, and progress demanded a broader and more constructive vision on the part of the lender. It was here that our far-seeing investment bankers rendered what has come to be recognized as a national service. It was their vision and courage and introspection that have largely made possible the swift skyscraper development of the past

decade. No longer are building owners confined to insurance companies for their mortgage loans.

Bankers Assist in Building Development

It is probable that, through the vision of these great investment bankers, the building development of our cities is fifty years ahead of where it would have been had they not entered the field of sound metropolitan real estate financing. Not only did these bankers make the large sums necessary for huge developments available, but they brought introspection and analysis to the problem. It was they who recognized that a great office building with a diversified tenancy was in fact one of the soundest possible investments, and, with their analysis, they brought business counsel, so that we now have conservative trusteeships that regulate and administer these mortgage loans. Interest and sinking funds are promptly collected, properties are watched, and the trustees see to it that the obligations of the borrower are fulfilled. Thus we have in our large cities magnificent, sound, earning properties that pay well and fulfill their obligations. In nearly all cases the land values are increasing, for it is almost universally true that well-selected plots of land in large cities continue to increase in value from year to year.

There is no magic about this. Our recent census indicates growth of cities ranging from twenty to two hundred per cent in the past decade. It indicates that, of our total population, fifty per cent is urban, as against about thirty per cent only twenty years ago, and increasing population makes for increased realty values. It is significant that, throughout our business depressions, prime real estate fluctuates very little, and while there is no criterion comparable to the Stock Exchange by which comparisons can be made, real estate experts are agreed that there is no such decline in value of well located properties as has been observed in even the most seasoned stocks on the Stock Exchange.

Skyscraper Is A Sound Investment

We have noted the important part played by the investment banker in the stimulation of our skyscraper developments. This, of course, means that, in fact, the public has supported the whole movement and will continue to support it, because the leadership of these bankers is sound. The occasional collapse of some improper financial structure is no more an indictment of the principle of mortgage bonds, than an occasional bank failure is an indictment of our banking system. The lesson to be drawn by an occasional failure in a building enterprise is the same as it is in any other business. Be guided by the sound reputable bankers, not by the rosy promises of larger returns from concerns that have neither history nor reputation. The building of well considered skyscrapers is one of the soundest of our fundamental industries.

(Copyright, 1930, Halsey, Stuart & Co.)

SUSPENDS OPERATIONS

The C. K. Spaulding Logging Company's mill at Salem, Ore., suspended operations last Monday and will remain closed until February of next year. Fifty men will be out of work as a result of the move. Plans will be delayed until October, after which the entire plant will close. Condition of the lumber market and lack of timber supplies were given as the reason for the shut-down.

NEW BUILDING MATERIAL IS SOUGHT BY SCIENCE

Plans to develop a new kind of building material that does not now exist are under way at the Massachusetts Institute of Technology.

These plans are the answer of science to the fire hazard, to the high cost of homes and the high expense of repairs. The aim is to put better homes in reach of every one and to improve building generally.

Research has started under direction of Ross F. Tucker, professor of building construction.

"We do not know yet just how it will be done," he says, "but to find out how and to do it is one of the things this school is for. The new materials may be of gypsum or cement, or some entirely new materials.

"They may, among other things, use the wood bar instead of steel for reinforcement of concrete, to save weight. They must be something light enough so that two men can set them in place."

On Professor Tucker's desk lies an object resembling a large, white sponge. It is not much heavier than a sponge but nearly as hard as stone.

"This is cement that has been aerated," he says. "It illustrates possibilities. Chemicals caused this cement to 'rise,' as bread dough rises from effects of yeast. The compound gave off hydrogen, and expanded the cement into a structure made of thousands of airtight cells, resulting in light, strong material.

"Man has improved many necessities, but for 50 years dwellings have been made of the same materials, and by the same hand labor. No way has yet been found to apply the methods of quantity production in construction of the modern home.

"We still use many of the tools and build by the methods of our forefathers, yet we spend about six billions of dollars a year for homes.

"We seek to make dwellings that can be erected by unskilled labor, be fire resisting, more durable, insulated from cold, and yet come within limits of present homeowners' incomes."

TITLE COMPANIES CO-OPERATE WITH MORTGAGE BANKER

Title insurance, survey, escrow and tax service are placed at the disposal of the mortgage banker by the modern title company, said James E. Sheridan, vice-president, Union Title & Guaranty Company, Detroit, in an address delivered before the Mortgage Bankers Association at Detroit.

"With title insurance, there is no question about title, no possibility of delay due to title. Unquestionably, title insurance has more than done its part in establishing the liquidity of mortgage paper. In these troublesome days with their unusual amounts of foreclosures, it must be satisfying to the mortgagee to know that he now holds a title which any later buyer is bound to accept, that he may warrant the title to a new buyer, knowing that the assets of a title company are behind his title for his protection."

More and more insurance companies and other investors are using the escrow service, tax and foreclosure services of the modern title company to relieve their own organizations of the troublesome details connected with mortgage loans, Sheridan said.

THE OBSERVER

What He Hears and Sees on His Rounds

The Merced Irrigation District is asking for bids to furnish four thousand barrels of cement "manufactured in the state of California." This is in accordance with a plan advanced by the California State Chamber of Commerce to purchase local materials on construction projects where "service, quality and price are equal."

Governor Franklin D. Roosevelt, of New York State, in a letter to Frederick Stuart Greene, superintendent of public works, ordered a definite warning to contractors on State projects that they must comply with the law giving employment to New York State citizens. "I want to ask you once more to repeat this notice in very definite terms," Governor Roosevelt wrote, "as I have pointed out before the duty of the State government is primarily to its own citizens and while we sympathize with unemployment conditions in other parts of the country, it is only right that we should take care of our own citizens first."

At a recent meeting of the Building Division of the Southern California Chapter, Associated General Contractors, considerable time was given to the discussion of the ordinances in Los Angeles and other Southern California cities requiring the employment of resident mechanics and laborers on all public works except when none were available. Attention was called to the fact that observance of these ordinances was being very strictly enforced and contractors were warned to protect themselves if they would avoid the penalty. The contractors on the Los Angeles Coliseum addition are requiring all men employed on that job to sign statements as to their residence and citizenship and it was suggested that other public works contractors should do likewise. The law does not apply to superintendents and foremen.

According to a recent announcement by Mrs. Debbie E. Allen, city clerk, the city council of Whittier has adopted regulations requiring that contractors submitting bids on cash jobs furnish either a certified check or a bond by an authorized solvent surety company. Heretofore, personal surety bonds have been permitted. Bonds on street and other improvement work, for which proceedings have been taken under state improvement acts, will, of course, continue to conform to the regulations of such acts. In the latter case, either certified check or personal sureties are permissible.

Allan C. Rush, 86, former San Franciscan and more recently of Los Angeles, has appealed to the district attorney of Los Angeles, to aid in the search for three alleged bunco men who were said to have bilked him of an asserted congressional franchise and plans made 22 years ago for a bridge to span San Francisco bay from Rincon Hill to Oakland.

Rush said he completed plans for the five and one-half mile span in 1908 and interested the late James J. Hill, railroad magnate, in a financing plan to raise \$60,000,000 for construction work. Soon thereafter, he said, a bill was passed by congress giving him a franchise for the bridge. Then came the world war, at which

time the construction program was abandoned.

Rush alleged three men approached him several weeks ago and obtained the models, plans and franchise for the bridge. Since then some of the plans and models have been returned by mail, but Rush said the franchise papers still are missing. Rush said he valued the papers at \$30,000.

Grigsby-Grunow's Majestic electric refrigerator to be placed on the market in the immediate future, is said to look like a radio—somewhat higher, thicker and white. Where the dial button of a radio would be is a similar cold-control button. Refrigerator space is 5 cubic feet—84 ice cubes. Insulation is 3 inches thick. Sulphur dioxide is used as refrigerant. The box sits about 5 inches off the floor, on legs. The refrigerator will sell for about \$150. Dealers' commission will be higher than the 20 to 30% now usually paid, but somewhat under 40%.

R. M. Alvord, chairman of the Industrial Committee of the California State Chamber of Commerce, at a meeting of the district council of that body last Friday, announced that a campaign was being launched asking the cooperation of county boards of supervisors and city councils to give consideration in all construction work to all California industries, upon service, quality and price being equal, in line with the purchasing policy of the State Chamber of Commerce. He further stated that the committee has a survey of the industrial water situation in the Bay region under way, in an effort to determine how important cost of industrial water is in the program of industrial development.

Concrete paving contractors who use batch trucks often find it cheaper to hire them than own them, says Constructo Methods. When hired, the more common practice is to pay the truck owners on a piece-work basis: so much a batch, so much a batch-mile, or so much a trip. This method causes much rivalry among the truck drivers. Often they race one another to the plant; sometimes they get out of line at the mixer in an effort to cut in ahead of competitors. Such action makes rivalry bitter, cause reckless driving and frequently affect job progress adversely. Payment at an hourly rate seems less profitable to the contractor, by comparison, until one considers the advantages to be gained. It is possible to get good trucks and reputable truck owners to haul batches in most places today. These men and these machines are ready to do fast and honest hauling. By hiring at an hourly rate, the contractor obtains reliable service and the assurance of order and co-operation on the job.

Paul J. Moranti of New York, the man who put Wall street on stilts and carved a half-mile ditch through the world's greatest financial section without disturbing the powder on a stenographer's nose, is seeking new holes to dig.

He looks forward today to his next big job—building a railroad tunnel under the Mediterranean Sea to connect Spain with Morocco. The Spanish government has appointed him consulting engineer for the project and he will leave soon to make borings off Gibraltar.

Moranti's task of constructing a subway excavation to link the lines of the Brooklyn-Manhattan Transit System is practically completed—one year ahead of schedule. Seven hundred men contributed to the work and it will cost the city \$5,735,149.

In executing a job that experts said could not be done without suspending operations on the markets, Moranti jacked up thirty-five skyscrapers, shifted a solid maze of electric conduits, gas, water and steam pipes; by-passed the most valuable network of cables in the world; removed a brick sewer, sank his supports in quicksand, dumped the excavated mud twelve miles at sea and fought every step of the way against dense traffic and swarms of pedestrians on the narrow streets in the city.

And now Moranti proposes to tackle a tougher job—the railroad tunnel under the Mediterranean Sea.

It is generally understood that all construction work incidental to Boulder Dam, now known officially as Hoover Dam, will be done by contract.

This means that the larger number of men engaged on the work will be employed directly by the construction contractors, including practically all those in positions such as laborer, helper, cook, steward, skilled mechanic, storehouseman, timekeeper, cost-keeper, truck driver, foreman, construction superintendent, etc.

If done by contract, the contractors, and not the United States, will purchase and furnish all construction equipment required on the work.

Materials required, such as cement, lumber, (except form lumber), reinforcing steel, etc., and permanent operating equipment such as pipe, outlet gates, valves, etc., will be purchased by the United States, after appropriate advertisement.

"There has been a sharp increase in building construction since the middle of August," writes J. C. Royle from Washington, D. C. "This has been entirely confined to public works and commercial and industrial projects. But it is evident that it is going to be some little time before residential construction catches up with the procession.

"The home building industry is paying for individuality and this is a super-charge, according to bankers and contractors. In time of active prosperity, owners, builders and bankers are not loath to meet this charge. But in the times of business depression, none can afford it. This is one of the things which has checked building.

"Prices of building materials have receded and it should be an advantageous time to build, from the commodity market viewpoint. Many forms of structural steel are at low figures."

LUMBER FIRM SUED

The estate of the late J. Gordon Mills, attorney of Inglewood, killed when a trailer truck crashed into his automobile last July, has filed suit in Los Angeles for \$100,000 damage against the Rossman Bros. Lumber Company of Wilmington. The action charged negligence on the part of the lumber firm.

ALONG THE LINE

Henry E. Robertson, formerly Pacific coast manager for Virginia Bridge & Iron Co., is now with the Union Engineering Company, industrial engineers and contractors, Huntington Park.

Bruce L. Burlingame is now joint sales representative of the Redwood Manufacturers Co. and the Santa Fe Lumber Co., in Southern California, with headquarters at 809 Pacific Elec. Bldg., Los Angeles.

George Hogan, prominent vineyardist, brother of Walter E. Hogan, city manager of Stockton, died in a Stockton hospital Sept. 23. He had been ill several weeks. He was a native of California and spent his entire life in the Lodi district.

James M. McCurdy, 63, retired civil engineer, for 35 years associated with the Southern Pacific Railroad, died at his home in Palo Alto Sept. 19. McCurdy was born in Rockbridge, Va., and had been a resident of Palo Alto for 25 years. His widow and a nephew survive.

Ernest H. Rogers, city building inspector of Alameda, has been authorized by the Alameda city council to attend the ninth annual meeting of the Pacific Coast Building Officials' Conference, to be held in Long Beach, Sept. 29 to Oct. 4.

Burton Lowther, Denver engineer, has been appointed consulting hydraulic and sanitary engineer for the government town to be constructed near the site of the Hoover-Boulder Dam. The appointment of Lowther was made by Secretary of the Interior Raymond F. Walter, chief engineer of the United States Reclamation Service. Entire charge of the water supply and sewage disposal and sanitation of the new "ideal" town will be placed in Lowther's hands.

C. C. Kennedy, San Francisco consulting engineer is in Phoenix, Ariz., to confer with Franklin D. Lane, mayor, and Walter Jamieson, city engineer, on the proposed water and sewer program under the \$3,422,000 bond issue, recently authorized. The water system work will be supervised by City Engineer Jamieson and the sewer work construction by Holmquist and Maddock, consulting engineers of Phoenix, Mr. Kennedy acting in an advisory capacity.

Wm. F. Connor of Los Angeles, has been appointed secretary of the River-side Lumbermen's Club to succeed W. S. Elton who resigned to enter the hardware business at San Francisco. Connor is a retail lumberman and has had secretarial experience in the lumber business in the state of Washington.

SEEK REPRESENTATION

Oakland has been asked to send official representatives to the annual convention of the Municipal Plumbing Inspectors' Association of California which will be held at Fresno, December 5. The matter has been referred to Commissioner of Public Health and Safety for recommendation.

HERE — THERE —
EVERYWHERE

The Public Buildings & Lands Committee of the San Francisco Board of Supervisors has approved an appropriation of \$7500 to finance San Francisco's share of the cost of editing and publishing a new code of building laws.

First reading of an ordinance, recommended by the Reno electrical arbitration board, regulating the type of metal conduits in the city, has been given first reading by the Reno, Nevada, city council.

Uncle Sam is going to build a new post office in Carmel-By-The-Sea, down in Monterey County. The folks in Carmel hope that when it is built it will conform with Carmel's ideals of architecture and add distinction to the village.

M. T. Sturtevant and William C. Spencer, deputy building inspectors, will represent the city of Oakland at the ninth annual meeting of the Pacific Coast Building Officials' Conference, to be held in Long Beach, Sept. 29 to Oct. 4.

Local labor will be employed on civic projects wherever possible under a resolution adopted by the Monterey city council at the request of the Monterey Building Trades Council. The resolution states that the present economic depression makes it necessary for the welfare of Monterey that local labor be given employment wherever possible.

The San Francisco Board of Supervisors has adopted an ordinance fixing a \$25 quarterly license fee for miniature golf courses.

During the first 17 days of September the Los Angeles city building department issued 1864 permits with an estimated valuation of \$3,916,213. For the corresponding period in September a year ago the number of permits issued was 1488 and the estimated valuation was \$2,915,249, while for the first 17 days of August, 1930, the number of permits issued was 1425 and the estimated valuation was \$2,607,048. Los Angeles' building total for the current year up to and including September 17 was \$35,965,317 as compared with \$70,440,753 for the corresponding period last year.

Albert C. White of the City Engineering Department, and E. Curtis Neal of the Building Permit Department of the City of Fresno, will represent that city at the Ninth Annual meeting of the Pacific Coast Building Officials' Conference to be held in Long Beach, September 29 to October 4, it is announced by C. C. Jarman, chief building inspector of Fresno.

At the annual election of officers of the State Association of Architects, San Diego Section, Herbert J. Mann was elected president and district advisor; Eugene Hoffman, vice-president, and Robert J. Curtis, secretary and treasurer. The state association has replaced the former San Diego Architectural Association.

There will be four official languages used at the Sixth International Road Congress, Washington, October 6 to 11. They are: French, German, English and Spanish.

TRADE LITERATURE

Catalog 80 of the Western Wheeled Scraper Co., Aurora, Ill., describes in 144 pages a very extensive line of grading tools and machines, giving special prominence to dump cars of both door-door and lift-door types. The catalog is very complete, containing many excellent illustrations.

"What Research Has Developed for Pipe Coating" is briefly discussed in a leaflet issued by the Ohio Varnish Co., Cleveland, Ohio.

The spheroidal design of oil storage tanks with a flattened bottom, designed to use metal with maximum economy, is fully described in a 10-page illustrated booklet issued by the Chicago Bridge & Iron Works, Chicago, Ill.

Iron and steel paint protection is the subject considered in "Master Specifications," issued by the Joseph Dixon Crucible Co., Jersey City, N. J. The booklet is designed to simplify the problem of paint selection and to assist the specification writer.

Blawforms for general concrete construction are described and illustrated in great variety in an attractive 112-page illustrated publication of the Blaw-Knox Co., Pittsburgh, Pa. Separate chapters are devoted to engineering structures of many kinds, including conduits, tunnels, walls, piers, dams, subways, bridges and roads.

HOME BUILDING CAMPAIGN FOR
ST. LOUIS

A campaign to disseminate information to the public about the construction of homes so that they may be able to gauge the relative value of construction materials which go into the building and avoid the danger from unscrupulous contractors who would use inferior materials has been launched by the Construction Industries Division of the Better Business Bureau of St. Louis.

The co-operation in the campaign of building and loan companies, mortgage bankers, contractors and architects was pledged at a meeting between representatives of these groups and the construction division.

The Construction Industries Division of the Better Business Bureau of St. Louis has issued a booklet, "Taking the Mystery Out of Building Construction" the purpose of which is to guide the public intending to buy or build a home. The booklet urges that the prospective home owner should "investigate before he invests" and reviews the points about which he should satisfy himself before entering into the purchase of a home. It gives suggestions about the purchase of ground on which to build the house, planning the house, selection of materials, choosing responsible architects and contractors and financing.

PLUMBING FIXTURE PRICES

August wholesale prices of standard plumbing fixtures for a six-room house, as collected by the U. S. Department of Commerce from reports of 12 representative manufacturers and wholesalers, were \$98.32, as compared with \$98.27 in July and \$98.81 in August, 1929.

TRADE NOTES

Adam H. Moffatt will operate from 1215-1245 Harrison St., San Francisco, under the firm name of Bay City Iron Works.

Holbrook, Merrill & Stetson, Inc., Ltd., of San Francisco, will establish a branch office at 311 East Weber Ave., Stockton. The branch will be in charge of J. D. Hubbard for twelve years employed by the company in Sacramento. The Stockton branch will be sales headquarters for San Joaquin, Calaveras and Tuolumne counties, the northern half of Stanislaus and a portion of Amador County.

Plintkote Co., manufacturers of asphalt shingles, roofings and emulsions, has entered the Pacific Coast territory and will establish headquarters in San Francisco. It is announced by R. L. Perry, San Francisco manager for the concern. Warehouses and offices are being established in San Francisco, Los Angeles, Portland and Seattle. San Francisco will be made the company's Pacific export center.

Pioneer Brass Works, recently organized, has opened shop and office quarters at 159 Fourteenth Street and will specialize in ornamental bronze, brass and aluminum casting. A business is being built up with the building hardware concerns in the Central and Northern California district.

LOS ANGELES WATER BONDS BRING PREMIUM

Sale of \$5,000,000 Los Angeles waterworks 4½ per cent bonds due 1931 to 1970 was made recently to a syndicate headed by Eldredge and Company for a premium of \$43,850.

Included in the winning syndicate were Anglo London Paris Co., National Bankitaly Co., First Detroit Co. of San Francisco, and First National Bank of New York.

There were five bids filed by syndicates formed by twice that number of banking and investment banking houses. R. H. Moulton & Co. and associates offered a premium of \$42,569; Guaranty Co. of New York associated with American Investment Co., offered a premium of \$31,950; Chase Securities Corporation and associates, \$27,551; National City Co. syndicate, \$11,495.

SEEK CHANGES IN BUILDING ORDINANCE

Monterey's building ordinance was attacked by J. C. Anthony at the last meeting of the city council. Anthony seeks an amendment to the ordinances governing the construction foundations, thickness of chimneys and the use of metal lath. The present laws with regards to these items of construction, Anthony declares, cause needless expense in the construction of small homes.

The council declined to take immediate action, saying that a report from a committee of contractors which is investigating the ordinance will be made in a few weeks and that the sections against which Anthony complained would be considered by the committee.

An independent committee, comprised of Anthony, John Taunfer, Sam Hooke and Ernest Sundberg, all local contractors, was appointed by Mayor Hudson to investigate the three sections and report to the central committee.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1684).

R-3220-S ENGINEER, college graduate in mechanical, chemical or mining preferred. Must not be over 35 years and with at least five years' experience designing and estimating industrial plant equipment. Salary \$250-275 mo. Permanent. Location, Bay Region, and only local applicants can be considered for interview.

R-3333-S CHEMICAL ENGINEER, graduate, with 1-3 years' experience, for research work on development of plant equipment. Excellent opportunity for man with thorough chemical engineering training and with more than average ability. Salary \$150-175 mo. to start. Apply by letter. Location, Southern California.

R-3335-S ENGINEER, preferably mechanical, 25-35 years old, for cost analysis and time study work. Experience should include both shop and outside construction estimating and preferably some time study work. Salary about \$200 month to start. Apply by letter. Location, Bay Region.

R-3324-S CHIEF DRAFTSMAN, preferably not over 40, for large engineering drafting room. Will not be responsible for design but applicant should be a university graduate with wide experience. Must know how to handle men and get results thru leadership. Salary depends upon ability. Apply by letter. Location, Northern California.

K-318-W-1461-C-S ENGINEER specialist in forestry engineering, with long experience in logging operation, with knowledge of ice roads and construction of same, horse and mechanical transfer, construction of chutes, flumes and logging railroads. Should be capable of planning the felling of trees in a mountainous region, as well as the handling and transportation of the logs to the sawmills. Work will be on an area of about 1,500,000 acres. Apply by letter. Location, foreign.

K-297-W-1283-C-S ENGINEER, young either employed now or recently employed on design of hydraulic equipment particularly centrifugal pumps. Apply by letter, giving all details of experience, salary, etc. Location, Midwest.

FIVE PROPOSALS FOR S. F. INCINERATOR PLANT

Five different procedures for the receipt of bids for a new incinerator to replace the present antiquated plant at Fifteenth and De Haro Streets will be proposed to the Board of Supervisors by its Health Committee next Monday.

Through the Board of Public Works would be called bids:

1—For construction on plans prepared by the city engineer, and with city funds.

2—For construction by a manufacturer on his own plans, but with city funds.

The Supervisors themselves would receive bids for the awarding of a franchise:

1—For construction by successful bidder on city engineer's plans.

2—For construction on bidder's own plans.

3—For private operation of plant to be built by bond issue and owned by the city, but leased to bidder.

FOR FAILURE TO PAY MUNICIPAL LICENSE TAX

While it is well settled that a law violates the United States Constitution which specifies a penalty of imprisonment for persons who fail to pay their debts, yet it also is settled that a person who refuses to pay an occupational or a license tax may be imprisoned without violation of the Constitution, says The Constructor, official publication of the Associated General Contractors of America.

For example, in Marler, 282 Pac. 353, a municipality enacted an ordinance providing for a tax of 25 dollars upon the occupation of a building contractor within the city, and also provides that any contractor who fails to obtain a license is guilty of a misdemeanor.

A contractor refused to pay the license and he was sentenced to jail. He appealed to the court on the contention that the law is invalid. However, the court held the license valid and refused to grant an order releasing the contractor from jail, saying: "The rule is well settled that, when a municipality had authority to enforce its ordinances by appropriate fines, imprisonment or other penalties, it may use its penal power to insure the collection of its license fees, by making it an offense to engage in a particular occupation without a license. A prosecution under such an ordinance is not a proceeding on the part of the city to collect the amount of license required by the ordinance, but it is instituted to recover a fine for breach of it committed by the defendant in practicing his occupation without such license, and although he may be subjected to the payment of the fine, he will not thereby be entitled to the license. . . In other words, the contractor's incarceration was occasioned, not for debt, but for violation of a city ordinance, which provided a penalty for persons who engaged in certain occupations without privilege from the municipal corporation."

OMIT SEMI-ANNUAL STOCK DIVIDEND

Gladding, McBean & Co. directors on Sept. 18 omitted the regular 2 per cent semi-annual stock dividend due at this time. The regular quarterly cash dividend of 75c was declared, payable Oct. 1 to stock of record Sept. 20. Atholl McBean, president of the company, issued the following statement:

"The board of directors of Gladding, McBean & Co. deems it prudent at this time to discontinue the extra stock dividend."

ASPHALT PAVING CONFERENCE SET FOR DECEMBER

Salvaging of old macadam and gravel roads and the building of farm-to-market roads as a measure of farm relief, as an aid to unemployment, as a means of increasing the amount of freight handled by the railroads of the country and as affording relief for traffic congestion on main highways, will be the keynote of the Ninth Annual Asphalt Paving Conference to be held at the Hotel Peabody, Memphis, Tenn., Dec. 1 to 5, 1930. The conference, as usual, will be under the auspices of The Asphalt Institute, J. E. Pennybacker, managing director, and the Association of Asphalt Paving Technologists, C. A. Mullen, secretary.

TIME FOR FILING MECHANICS' LIEN LEGALLY EXTENDED

The law is well settled that the time for filing a mechanic's lien dates from the day the last labor or material was supplied on the job, providing the act of furnishing the labor or material was not done for the purpose of extending the lien. So held the higher court in *American Plumbing & Steam Supply Co. v. Alavicku*, 233 Pac. 917, says The Constructor.

Here an owner agreed to pay a contractor \$1,300 to install a heating plant in an old dwelling. The system proved defective and the contractor made several efforts to remedy the defects. Later the contractor was compelled to file a mechanic's lien to obtain payment.

The owner attempted to avoid the lien by proving that the contractor had neglected to file the lien within the 90 days statutory period after the heating system was installed.

The contractor argued that his lien should be valid because he had filed it within the statutory period after he had succeeded in remedying the defects. In holding the contractor entitled to a lien, the court said:

"It is evident that plaintiff (contractor) continued in good faith to work upon the heating plant in an endeavor to place the same in such condition that it would do its work satisfactorily to the defendant. The claim of lien was filed within 90 days from the date plaintiff so ceased to work upon the heating plant, and consequently was filed in time. It did not appear that the furnishing of labor and material was deferred fraudulently for the mere purpose of extending the time in which a lien could be filed, but that the time which elapsed was a necessary element of the performance of the contract."

Also, it is important to observe the decision of the higher court in the case of *Rieflin v. Grafton*, 115 P. 851. Here it was disclosed that the furnishing of material by the contractor ceased June 2, August 18 following, the contractor furnished two or three panes of glass to replace defective glass which he had previously delivered. October 14, following, he filed a notice of claim of lien.

The lower court denied the lien, being of the opinion that the same should have been filed within 90 days from June 2 and stated that it appeared that the contractor had supplied the extra glass merely to extend the lien.

However, the higher court held that, as the small delivery on August 18 was made upon the demand of one of the owners of the property for the purpose of correcting defects which he claimed existed in the material theretofore furnished by the contractor, the material was not furnished for the purpose of prolonging the time for filing a lien or renewing the right to file a lien which had been lost by lapse of time, and that the period for asserting a lien against the property began to run from August 18 instead of from June 2.

BUILDING DECLINES, MATERIAL COSTS ON DOWNWARD TREND

Official reports made to S. W. Straus & Co. from 555 leading cities and towns in all parts of the United States indicate that the decline in building operations has not yet run its full course. Building reports issued in these places in August totalled \$169,790,888, compared with \$188,937,604 in July and \$255,082,378 in August last year. The loss from the preceding month was 15% and from the

corresponding month of the preceding year was 37%.

It is to be borne in mind that these reports cover only such types of construction as those for which municipal building permits are required. The bulk of this work, therefore, is represented by private buildings in urban centers.

The Straus index of building permits after adjustments for seasonal and trend factors declined to 15.4% below normal in August. This compares unfavorably with the July index which was 13.1% below normal. The August, 1929, index was only 3.4% below normal. Since April the Straus index has been trending upward except for a slight decline in June and the present somewhat more substantial decline indicated for August.

The group of twenty-five cities reporting the largest volume of permits issued in August revealed a total for the month of \$92,193,747, a loss of 24% from August last year when the volume was \$120,627,682, and of 10% from July when the total was \$102,625,020. New York lost 33% from August, 1929, and Chicago 58%.

Unemployment in the building trades for the month of August as reported by the American Federation of Labor was 39%. Although there have been no reductions in published wage rates, a trade journal reported that in one city contractors are able to employ building workers at rates considerably below the union scale. Reports of increased efficiency are widespread. This condition is due to increasing unemployment in the building trades.

Though few price changes were reported for building materials in the month of August the situation is not good from the standpoint of most manufacturers. For example 33% of the plants reporting to the Common Brick Manufacturers Association are not operating. The lumber situation continues unfavorable due to difficulty in adjusting production to demand; this situation is reflected in numerous price declines for this commodity.

All-commodity prices and building material prices are continuing the decline begun in the latter part of 1929. How long this decline will continue is impossible to ascertain; there are evidences, however, that certain commodity prices have reached resistance levels. The declines in material prices, and consequently in building costs, should act as a stimulant to building activity.

The twelve leading states in building activities for the month of August, 1930, follow:

No. of Cities	Volume of Permits
1. New York.....47	\$38,481,989
2. California.....62	16,452,944
3. Illinois.....52	12,231,529
4. Ohio.....39	10,924,015
5. Pennsylvania.....29	10,887,159
6. Connecticut.....20	9,558,680
7. Michigan.....22	7,596,664
8. Texas.....21	6,952,647
9. Massachusetts.....31	6,603,264
10. New Jersey.....37	4,481,737
11. Wisconsin.....19	3,195,623
12. Indiana.....19	2,686,694

PASADENA ROOFERS ORGANIZE

Roofing contractors of Pasadena have formed a temporary organization with Fred P. Clyde, president; John W. Lytle, vice-president; and John J. Horner, secretary. A committee, composed of Edward Massie, C. G. Bell and W. G. Brunfield, was appointed to draft a constitution and by-laws.

CONTRACTORS APPROVE STANDARD SIZE FOR COMMON BRICK

The Building Division of the Southern California Chapter, Associated General Contractors of America, has voted approval of the standard size for common brick as proposed by the Clay Products Institute of California, 2 1/2x3 1/2x8 inches, says the Southwest Builder and Contractor.

With a half-inch mortar joint, this size would allow four courses of brick to a foot and would do away with the quarter-inch fractions. This standard does not apply to face brick. The movement to establish a standard size for common brick is backed by the State Chamber of Commerce. With the cooperation of manufacturers, which is now being sought, it is hoped to make the new standard effective Jan. 1, 1931.

ROCK CRUSHER COLLAPSE INJURES TWO

Two men employed by Tieslau Brothers, highway contractors of Berkeley, on a road project in the Lassen Volcanic National Park, were seriously injured last Tuesday when the rock crusher of the firm's Lake Helen crushing plant collapsed. About 100 tons of rock were stored in the bunkers at the time of the collapse.

TRADE PRACTICES FOR THE LUMBER INDUSTRY

Agreement on a definite code of trade practices in the lumber industry is being sought by the National Lumber Manufacturers' Association and joint conferences of manufacturers, wholesalers and retailers are being held in an effort to arrive at terms which will be satisfactory to all groups. A committee of the association has been appointed to work on the rules and has drawn up a tentative draft of practices which it is felt must be considered.

The draft includes such matters as: Misbranding, confusion of grades, false invoicing, rebates, discrimination in credits, misuse of grading tolerance allowance, written orders, price quotation, distribution of prices and stock lists, inspection, encouragement of use of grade-marked lumber, arbitration, terms of sale, dumping, distribution of lumber. The matter of distribution through wholesalers and retailers will be considered by the committee as well as means by which transit car and cargo dumping may be eliminated, the establishment of firm price policies and recommended general use of "car cards" as the means of eliminating fraud, false invoicing and misrepresentation by all branches of the industry.

UNVEIL SAFETY TROPHY AT REDWOOD CITY

In the presence of officials and employees of the Pacific Portland Cement Company, A. J. R. Curtiss of Chicago, officiated last Wednesday at the unveiling of a stone monument awarded by the Portland Cement Association to the Redwood City plant in recognition of its perfect safety record during 1929, during which safety measures prevented any accident or loss of time.

The safety trophy for which the Redwood City plant was one of only 99 plants throughout the United States to qualify, is a large plaque of polished stone, eight feet in height, mounted on a base eight by three feet. It depicts two figures in bas-relief holding a torch to the inscription, "Safety Follows Wisdom."

Governmental studies indicate that it costs an average automobile approximately 2.06 cents more per mile to drive on an earth road than on a hard-surfaced road.

Building News Section

APARTMENTS

Preparing Working Drawings.

APARTMENTS Cost, \$60,000
SAN FRANCISCO. Buchanan St. near Washington St.
Three-story frame and stucco apts. with brick basement (12 3-room apts.)

Owner and Builder—T. I. Strand, 822 26th Avenue.
Plans by Lawrence Ebbets, 320 Fulton Street.

Will be modernistic type of architecture. Sub-bids will be taken in one week.

Plans Completed.
APARTMENTS Cost, \$525,000
LOS ANGELES, Cal. No. 202 N. Argyle Avenue.

Eight-story Class A reinforced concrete apartments (138x152 feet).
Owner—Judge Douglas L. Edmonds, 407 N. Orange Drive, Los Angeles
Architect—Paul Kingsbury and T. P. Barber, Union Insurance Bldg., Los Angeles.

Contract Awarded.
APARTMENTS Cost, \$200,000
LOS ANGELES, Cal. S. G. mercy Place.

Seven-story Class A reinforced concrete apartments.
Owner—Harry Bergman.
Architect—Fred Sward, Delta Bldg., Los Angeles.

Contractor—Harris-Walsh Constr. Co., I. W. Hellman Bldg., Los Angeles

Contract Awarded.
APARTMENTS Cost, \$16,000

M. on October 15, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

Humboldt County, at High Rock Hill (I-Hum-1-D), about four-tenths (0.4) mile in length, to be graded and surfaced with untreated crushed gravel or stone.

Solano County, five concrete bridges between Vacaville and Dixon (X-Sol-7-D), to be widened to a clear roadway width of twenty-eight feet (28').

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The

special attention of prospective bidders is called to the "proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS,
C. H. PURCELL,
State Highway Engineer.
Dated September 17, 1930.

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS
NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received by the Department of Public Works, Division of Highways, at the office of the District Engineer, 502 State Office Building, Sacramento, California, until 2:00 o'clock P. M. on October 1, 1930, at which time they will be publicly opened and read, for performing work as follows:

Colusa County, between Bear Creek and 8 miles west of Williams, a distance of about nine (9) miles, road III-Col-15-D, constructing property fence.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the above address.

No bid will be received unless it is made on a proposal form furnished by the District Engineer. Each bid must be accompanied by cash or a certified or cashier's check made payable to the Director of Public Works, for an amount equal to at least ten (10) per cent of the amount bid, such guaranty to be forfeited should the bidder to whom the contract is awarded fail to enter into the contract.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS,
C. H. PURCELL,
State Highway Engineer.
By C. H. WHITMORE,
District Engineer, Dist. III
Dated September 18, 1930.

ADVERTISEMENT FOR BIDS

Subject to conditions prescribed by the undersigned, sealed bids are invited for Installation of (1) Plumbing Equipment, Heating and Ventilating, (2) Electric Equipment; (3) Refrigeration and Air Conditioning Apparatus in the buildings of the Engineering Group, University of California, Berkeley, California. No bids received after 11:00 A. M. Monday, October 6, 1930. The right to reject any and all bids is reserved. For full information apply to Cashier's Window, California Hall, University of California, Berkeley. A deposit of \$100 is required for each set of Drawings and Specifications.

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA

OPENS NEW QUARTERS

The Bell Paint and Glass Company, Sacramento's newest wholesale and retail concern, has opened quarters at 1327 J St., in the capital city.

The concern is owned by Irving M. Arm, who has been in the paint and glass business for the past 22 years and who operated the Bell Glass Co. at 1324 Del Paso Blvd. in North Sacramento for a year.

Prior to going to Sacramento, Arm was in Oakland and New York. He learned the business in Paris, France, coming to the United States about 15 years ago.

The Bell Paint & Glass Company will handle complete lines of paints, glass, brushes, other painters' supplies and wallpaper.

BRIDGES

SOLANO COUNTY, Cal.—Until October 15, 2 P. M., bids will be received by State Highway Commission to widen to a clear roadway width of 28 feet, five concrete bridges between Vacaville and Dixon.

SANTA BARBARA, Calif.—Until 10 A. M., Oct. 6, bids will be received by the county supervisors to construct structural steel bridge with reinforced concrete deck, web and wing walls over San Jose Creek on Patterson Ave. in the 3rd Road District, 3rd Township. Plans may be obtained from the county surveyor upon deposit of \$5. Certified check 10%. D. F. Hunt, clerk

EUREKA, Humboldt Co., Cal.—Until October 14, 2:30 P. M., bids will be received by Fred M. Kay, county clerk, to construct bridge near the Cochran Ranch in District No. 5. Plans obtainable from County Surveyor Frank Kelly at Eureka.

EUREKA, Humboldt Co., Cal.—W. S. Salvage, Eureka, at \$619.50 and 34c cu. yd. for embankment, \$1.30 lin. ft. for 12-in. culverts, \$1.78 lin. ft. for 18-in. culverts, awarded contract by county supervisors to construct bridge on Arcata bottom near Cachran ranch connecting Arcata Rd. with road running to the north. Other bids:

Smith Bros. Co., bridge, \$933; embankment, 47c; 12 in. culvert, \$2, 18 in. \$3.

Henry Padgett, bridge, \$1236; embankment, 54c; 12 in. culvert, \$2.10; 18 in. \$2.65.

Mercer-Fraser Co., bridge, \$1390; embankment, 56c; 12 in. culvert, \$1.50, 18 in., \$2.

Engelhart Paving & Constr. Co., bridge, \$1500; embankment, 47c; 12-in. culvert, \$1.75, 18 in. \$2.50.

Bruce Markle, bridge, \$1800; embankment, 33½c; 12-in. culvert, \$2.50 18 in., \$2.50.

EL CERRITO, Contra Costa Co., Cal.—City Engineer Ross L. Calfee is preparing plans for culverts at Barrett Ave. and Edward St. and at Edward St. and Poinsettia Ave. It is also proposed to provide culverts at Barrett Ave. and Tulare St. and in Johnston Ave. west of Edward St.

LOS ANGELES, Cal.—Oberg Bros., 3470 Hollenbeck Ave., Los Angeles, at \$153,400 awarded contract by county supervisors to construct a concrete bridge across the Los Angeles River at Atlantic Ave., just north of May-st. Cash contract. Project involves: 4973 cu. yds. concrete; 603,660 lbs. reinf. steel; 12,686 ft. conc. piling; 6340 cu. yds. excav.; 15,112 lbs. steel castings; 10,295 lbs. steel plates; 5156 lbs. expansion angles; 245 bronze plates for light posts; 1225 ft. 1½-in. conduit; 160 ft. class D cable; 3055 lbs. sheet lead; 2464 lbs. anchor bolts; 477 lbs. sheet copper.

BAKERSFIELD, Kern Co., Cal.—Stroud Bros. and Seabrook Bakersfield, at \$5817 awarded contract by city council to construct two cement concrete culverts, one at 34th St. and Kern Island Canal and another at 24th

St. and Low Canal. Complete list of bids follows, all bidders of Bakersfield:	
Stroud Bros. & Seabrook.....	\$5817
Currie & Duglar.....	5877
G. A. Graham.....	6396
Weitzel & Larsen.....	6547
Moon & Moon.....	6570
Clark Gramling.....	6755
Dean & Stroble.....	6873

DREDGING, HARBOR WORKS & EXCAVATIONS

RICHMOND, Contra Costa Co., Cal.—City council has been advised by Lieut. Col. Thomas M. Robins, U. S. Engineer in Charge of Rivers and Harbors in this district, that the Federal Government is prepared to proceed with completion of the restraining wall in Richmond harbor by extending it 3,000 ft. to make a wall 10,000 ft. long. The estimated cost is \$190,000 of which the city is to pay one-half. The Government proposes to dredge the entire channel to a depth of 23 ft. with the completion of the wall and to deepen the entire channel to 30 ft. in 1934.

OAKLAND, Cal.—Until September 29, 4:30 P. M., bids will be received by G. B. Hegardt, secretary, City Port Commission, 421 Oakland Bank Bldg., for dredging fronts of slips at Grove Street Pier involving approximately 14,000 cubic yards of material to be removed. Specifications obtainable from above.

MONTEREY, Monterey Co., Cal.—Engineer Francis Betts Smith, 58 Sutter St., San Francisco, is preparing plans for submission to the city council to widen the top of the present seawall from 12 ft. to 20 ft. permitting greater storage capacity, also to permit the construction of smaller wharves radiating out from the present causeway.

COTATI, Sonoma Co., Calif.—Paris Bros., Berkeley, awarded contract by Cotati Co. for digging approximately 10 miles of drainage ditches on the company's holdings. Ditches will be 5 ft. wide at the top, 2 ft. at the bottom and approximately 4-ft. deep.

SANTA BARBARA, Calif.—Shannahan Bros., San Fernando Bldg., Santa Barbara, at \$54,000 awarded contract by city council to construct E Cabrillo Blvd. wall or revetment.

STOCKTON, San Joaquin Co., Cal.—Until October 2, 3 P. M., under Circular Proposal No. 31-84, Specifications No. 2377, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, for clearing brush and trees from the area of Item 316, along the west bank of the San Joaquin River, on McDonald Tract, between Spud Island and McDonald Pump, a distance of about 12 miles below Stockton. Specifications obtainable from above office.

STOCKTON, San Joaquin Co., Cal.—Until October 2, 3 P. M., under Circular Proposal No. 31-83, Specifications No. 2350, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, for clearing brush and trees from the area of Items 307 and 308 along the Easterly bank of the San Joaquin River be-

tween the mouth of the Calaveras River and Twelve Mile Slough, distances of about 5 and 6½ miles below Stockton. Specifications obtainable from above office.

IRRIGATION PROJECTS

MERCED, Merced Co., Cal.—Until October 7, 10 A. M., bids will be received by H. P. Sargent, secretary, Merced Irrigation District, to furnish 4,000 barrels of Portland cement, to which has been added at the cement mills 3 lbs. of Celite to each 94 lbs. of cement. Cement must be manufactured in the state of California. Delivered to district in commercial cement cloth and/or paper sacks in carload lots, f.o.b. Merced or any other railroad station within the district. Prices shall be quoted for delivery at Merced, with the understanding that such adjustments in prices will be made for cement delivered at other points as shall be proper in view of the difference in freight rates.

Most of the cement will be used in the concrete lining of canals and the construction of certain structures, and while it is expected that the greater portion of the work will be completed by June 1, 1931, it is possible that some deliveries of cement may be required at intervals up to September 30, 1931. Deliveries are to be made in such quantities and at such times as the District shall direct upon a maximum of three days' notice. Certified check 5% payable to district required with bid.

MERCED, Merced Co., Calif.—Until October 7, 10 A. M., bids will be received by H. P. Sargent, secretary, Merced Irrigation District, for shaping and concrete lining of approximately six miles of existing canals and installing side gates and other structures. Bids are wanted under fifteen schedules as follows:

- No. 1—Hammatt Canal, 5,600 lin. ft. or 100,000 sq. ft., 2-in. lining.
- No. 2—Jordan Canal, 3,000 lin. ft. or 47,000 sq. ft. do.
- No. 3—McCoy (Raser) Canal, 1,500 lin. ft. or 30,000 sq. ft., 2-in. lining.
- No. 4—Cooper Ditch, 2,300 lin. ft. or 26,000 sq. ft. do.
- No. 5—Martin Canal, 2,300 lin. ft. or 33,000 sq. ft. do.
- No. 6—McCoy Canal, 3,000 lin. ft. or 47,000 sq. ft. do.
- No. 7—Wakefield Canal, 1,200 lin. ft. or 18,000 sq. ft. do.
- No. 8—Buhach Canal, 2,500 lin. ft. or 32,000 sq. ft. do.
- No. 9—Pohle Canal, 1,700 lin. ft. or 17,000 sq. ft. do.
- No. 10—North Bloom Canal, 1,400 lin. ft. or 16,000 sq. ft. do.
- No. 11—Tin Flume Canal, 2,500 lin. ft. or 30,000 sq. ft. do.
- No. 12—Buhach Canal (By Well 28), 1,800 lin. ft. or 27,000 sq. ft. do.
- No. 13—Le Grand Lateral (7), 2,300 lin. ft. or 27,000 sq. ft. do.
- No. 14—Le Grand Lateral (19), 900 lin. ft. or 15,000 sq. ft. do.
- No. 15—Fairfield Canal, 2,800 lin. ft. or 49,000 sq. ft. do.

Certified check 5% payable to Merced Irrigation District required with bid. Plans obtainable from secretary on deposit of \$5. returnable.

EL NIDO, Merced Co., Cal.—Petitions are being circulated in the El Nido Irrigation District seeking a bond issue for \$135,000 to finance con-

struction of irrigation works to obtain water from the surplus available in the Merced Irrigation District. The California Bond Certification Commission has recommended such an issue.

STREET LIGHTING SYSTEMS

SAN JOSE, Santa Clara Co., Cal.—See "Streets and Highways," this issue. Improvement of Santa Clara St., bet. Market and Montgomery Sts., etc., involving installation of 60 electrolux together with underground system.

SOUTH SAN FRANCISCO, San Mateo Co., Cal.—Assistant City Engineer R. A. Klassen, in a report to the city council, estimates the city's lighting bill will be increased \$3402 annually with the contemplated installation of an electrolux system in Grand Ave., involving 187 standards. Property owners have petitioned for installation of the system.

RED BLUFF, Tehama Co., Cal.—City trustees contemplate installation of lighting system in Walnut St. Tentative estimates place the cost at \$4000.

SANTA BARBARA, Cal.—Until 1:30 P. M., Oct. 2, bids will be received by the city council to install lighting system in West Cabrillo Blvd., between State St. and Castillo St., involving King Ferronite type posts; 1911 Act. Bids were previously taken on this work August 14. Note—This work was previously noted as for Oct. 22. Correct date is Oct. 2, as shown above.

MACHINERY AND EQUIPMENT

WASHINGTON, D. C.—See "Government Work and Supplies," this issue. Bids wanted by Bureau of Supplies and Accounts, October 7, to furnish and deliver San Francisco, two 1000 lbs. capacity air hoists; one pipe threading and cutting machine; one motor-driven saw bench; 1 motor-driven bench drill, (delivered San Diego); one Universal Lathe.

SAN MATEO, San Mateo Co., Cal.—Until October 6, 10 A. M., bids will be received by J. J. Casey, clerk, San Mateo School District, to furnish and deliver one automobile school bus, 1929 model or later; capacity 40 pupils; equipped with motor of at least 18 hp. S. A. E. and of at least 4 cylinders.

OAKLAND, Cal.—Until October 9, 12 noon, bids will be received by Frank C. Merritt, city clerk, to furnish and deliver two gasoline street rollers for Street Department. Specifications on file in office of clerk. Walter N. Frickstad, city engineer.

ROSEVILLE, Placer Co., Cal.—Until October 1, 8 P. M., bids will be received by F. R. Chilton, city clerk, to furnish four automobiles: two of the express type with closed cab, one standard coupe, and one 1½-ton half pneumatic-tired truck. Allowances to be made for equipment no longer required by the city.

LOS BANOS, Merced Co., Cal.—Until October 1, 2 P. M., bids will be received by R. L. Puccinelli, clerk, Los Banos Elementary School District, to furnish and deliver a school bus, in accordance with specifications obtainable from Clerk. Allowance to

be made for bus no longer required by the district.

OAKLAND, Cal.—Brown Bros. Welding Co., 223 Main St., San Francisco, at \$1160 awarded contract by East Bay Municipal Utility District, to furnish one electric welder.

RAILROADS

CALIFORNIA.—Utah Const. Co., Phelan Bldg., San Francisco, and W. A. Bechtel Co., 155 Sansome St., San Francisco, have awarded the following sub-contracts for grading in connection with 112 miles of Western Pacific-Great Western R. R. project between Keddies and Bieber:

Keddies to Mile Post 4, Morrison-Knudsen Co., Boise, Idaho.

Mile Post 4 to Mile Post 8, Paul J. Tyler, Oroville.

Mile Post 8 to Mile Post 15, Lewis Const. Co., Los Angeles.

Mile Post 15 to Mile Post 19, Paul J. Tyler.

Mile Post 25 to Mile Post 40, Helselt Const. Co., Salt Lake City.

Mile Post 40 to Mile Post 78, Lewis Const. Co., Los Angeles.

Mile Post 78 to Mile Post 96, Fredrickson & Watson, Oakland.

Mile Post 96 to Bieber, W. H. Puckett Co., Boise, Idaho.

FIRE ALARM SYSTEMS

HUNTINGTON PARK, Cal.—Until 8 P. M., Oct. 6, bids will be received by city council for four automatic electric traffic signals at the inter. of Pacific Blvd. and Randolph St. Specifications may be obtained at the office of the city clerk, W. P. Mahood. Certified check or bond 10%.

RESERVOIRS AND DAMS

LAKEPORT, Lake Co., Cal.—City council rejects four bids to construct reinforced concrete reservoir in connection with water system and bids ordered re-advertised to be opened October 3. Rejection was ordered due to error in advertising. Plans are obtainable from F. L. Coles, city clerk.

DAILY CITY, San Mateo Co., Cal.—City Engineer R. A. Klassen, Court-house, Redwood City, is preparing plans for a 1,000,000 gallon reservoir to supplement the 800,000-gal. tank now in use in connection with the municipal water system.

OAKLAND, Cal.—C. A. Bruce and Son, Pleasanton, at \$2,944.50 (B) awarded contract by county supervisors to construct dam across Arroyo Del Valle Creek near the sanatorium. T. C. Little and P. C. Madson (B) only other bidders, at \$6,003.75. Unit bids follow:

145 cu. yds. excavation, above E1 64B, (A) \$3.50; (B) \$6.00;
50 cu. yds. excavation, below E1 64B, (A) \$3.50; (B) \$13.50;
80 cu. yds. excavation, rock, (A) \$6.00; (B) \$19.50;
155 cu. yds. concrete, (A) \$16.00; (B) \$16.50;
2900 lbs. steel, (A) \$.07; (B) \$.075;
330 sq. ft. 6-in. conc. apron, (A) \$.30; (B) \$.375.

MODESTO, Stanislaus Co., Calif.—City council and civic bodies are considering the proposal to dam the Tuolumne river, bounding the southern city limits, to form an artificial lake for recreational purposes. The improvement would permit motor boat racing and other water sports, in addition to providing a municipal pool.

PIPE LINES, WELLS, ETC.

MERCED, Merced Co., Calif.—Until October 7, 10 A. M., bids will be received by H. P. Sargent, secretary, Merced Irrigation District, for drilling and casing of three drainage wells. Certified check 5% payable to district required with bid. Specifications obtainable from secretary on deposit of \$5, returnable.

SEWERS AND SEWAGE DISPOSAL PLANTS

SANTA CRUZ, Santa Cruz Co., Cal.—Thompson Bros., Santa Cruz, at \$1,177 awarded contract by city council (460-C) to construct vitrified clay pipe main sanitary sewer with wye branches and brick manholes in Plateau Ave. bet. Woodrow Ave. and Columbia St.

WATSONVILLE, Santa Cruz Co., Cal.—City council orders construction of sewer connections in Monte Vista Ave. Estimated cost \$1100. H. B. Kitchen, city engineer.

LOS ANGELES, Cal.—City council sets November 4 as date to vote bonds of \$6,000,000 to finance construction of sewers in various sections of the city.

RENO, Nev.—I. Christensen Const. Co., Reno, only bidder at \$126,184 awarded contract by city council to construct sewer lines in various subdivisions, involving: 340 lin. ft. 6-in. 59,000 lin. ft. 8-in. and 1,300 lin. ft. 10-in. pipe; 145 sewer manholes.

MONTEREY, Monterey Co., Cal.—No bids received by city council September 16 (2997) to construct 6-inch vitrified sewer in Grace St., from Irving Ave. to point 25 ft. nw of Prescott Ave., including two manholes and 36 4-in. wye branches. It is proposed to enlarge the project and ask new bids. Howard Severance, city engineer.

REDWOOD CITY, San Mateo Co., Cal.—Until October 6, 7:30 P. M., bids will be received by B. E. Myers, city clerk, (M-14) to install ornamental street lighting system, 17 2-light standards, in Broadway between El Camino Real and Brewster Ave., etc., together with underground system. Union Metal Design No. 8092. 1911 Act. Bond Act 1915. Specifications obtainable from above. Certified check of 10% payable to city required. C. L. Dimmitt, city engineer.

FAIRFIELD, Solano Co., Calif.—County Surveyor Steiger instructed to secure estimates of cost from the Vallejo Electric Light & Power Co. to furnish electric energy for a 15-hp. pumping plant to be used in connection with the sewer system of Acq. and Imp. Dist. No. 1 in the Vallejo township.

ANTIOCH, Contra Costa Co., Cal.—City Engineer Leo C. Adams is preparing plans and will construct by day labor storm drains at three street intersections; estimated cost \$1,200.

PHOENIX, Ariz.—See "Waterworks," this issue. C. C. Kennedy, San Francisco engineer, to act in advisory capacity on sewer project and water development.

BERKELEY, Alameda Co., Cal.—Until September 30, 10 A. M., bids will be received by Florence E. Turner, City Clerk, to construct sewer in The Alameda, San Pedro Ave. and Laurel Lane. Certified check 10% payable to city required with bid.

Plans obtainable from city engineer on deposit of \$10, returnable.

MADERA, Madera Co., Cal.—Aa previously reported, bids will be received by Jas. Wakefield, city clerk, to construct extensions to sewer system for which bonds of \$20,000 were recently voted. Project involves: 957 ft. 15-in. vit. sewer; 4763 ft. 12-in. vit. sewer; 2216 ft. 10-in. vit. sewer; 2018 ft. 8-in. vit. sewer; 10,362 ft. 6-in. vit. sewer; 60 ft. 12-in. cast iron pipe sewer; 12 ft. 6-in. cast iron pipe sewer; 41 concrete manholes; 17 clay linchpipes; 1 50 G. P. M. sewage ejector (alt. bids on single and duplex units); 1 concrete sump.

Andrew M. Jensen, engineer, 68 Post St., San Francisco. Certified check 10% payable to city required with bid. Plans on file in office of city clerk.

See call for bids under official proposal section in this issue.

ALAMEDA, Alameda Co., Cal.—John Pestana, 1232 35th Ave., Fruitvale, at \$6,322.33 lowest regular bidder, awarded contract by city council to construct storm water sewer in High St. from Central Ave. to the tidal canal. Following is a complete list of bids:

W. J. Tobin.....	\$6,324
J. T. Clinch.....	6,792
John Pestana.....	6,322
L. L. Page.....	7,594
Heafey-Moore Co.....	7,310

WATER WORKS

RED BLUFF, Tehama Co., Calif.—City trustees authorize purchase of a quantity of galvanized pipe for use as street drains and for a quantity of 4-in. c. i. pipe to replace water mains in various sections of the city.

NEVADA CITY, Nevada Co., Cal.—Until October 6, 10 A. M., bids will be received by Geo. Coughlan, county clerk, to furnish and deliver to the county hospital 1,300-ft. of 3-in. new standard galvanized iron pipe, including couplings. Specifications and further information obtainable from clerk.

EL CENTRO, Imperial Co., Calif.—Until 7:30 P. M., October 15, bids will be received by the city council for cast iron pipe, bell and spigot, 12-in. ft. or 16-in. lengths, f.o.b. El Centro as follows:

(1) 1000 ft. 6-in. pipe;
(2) 2000 ft. 4-in. pipe.

Certified check or bond, 10%. J. C. Neale, city clerk.

MERCED, Merced Co., Cal.—Until October 7, 10 A. M., bids will be received by H. P. Sargent, secretary, Merced Irrigation District, to furnish three drainage pumps and 5% motors complete. Certified check 5% payable to district required with bid. Specifications obtainable from secretary on deposit of \$5, returnable.

PHOENIX, Ariz.—C. C. Kennedy, consulting engineer of San Francisco, is in Phoenix to confer with Franklin D. Lane, mayor, and W. J. Jamieson, city engineer, on the proposed water and sewer program under the \$3,422,000 municipal bond issue. The water system work will be supervised by W. J. Jamieson and the sewer construction by Holmquist and Madcock, consulting engineers, Phoenix. C. C. Kennedy is acting in an advisory capacity.

ANTIOCH, Contra Costa Co., Cal.—City council plans installation of a new filter plant at the pumping station on the river front, in connection with the municipal water system. Leo O'Hara is city engineer.

RED BLUFF, Tehama Co., Cal.—Until October 6, 7:30 P. M., bids will be received by E. E. Stevens, engineer, Municipal Water Department, to furnish 1000 feet of 4-inch cast iron pipe, Class 100 lb. pressure or heavier; delivered f. o. b. Red Bluff. Certified check 10% required with bid.

SAN FRANCISCO.—Following bids received by Leonard S. Leavy, city purchasing agent, 270 City Hall, to furnish and deliver 2,500-ft. of 12-inch Bell and Spigot, tar coated cast iron pipe for San Francisco Municipal Water Department:

American Cast Iron Pipe Co., Balboa Bldg., 16-ft. lengths, \$1,298 lin. ft. Delivery 50 days.

United States C. I. Pipe & Foundry Co., Monadnock Bldg., 12-ft. or 18-ft. lengths, \$1,366. Delivery 60 days.

National Cast Iron Pipe Co., 571 Mission St., 12-ft. or 18-ft. lengths, \$1,32. Delivery 30 to 40 days.

PLAYGROUNDS & PARKS

WOODSIDE, San Mateo Co., Cal.—W. O. Tyson, Redwood City and Chris Jordan, Belmont, awarded contract by Woodside Country Club to lay out an 18-hole golf course of championship length at Woodside. The project, including clearing, grading, etc., will involve an expenditure of \$90,000. A. R. Lyon is president of the club.

FRESNO, Fresno Co., Cal.—November 4 is the date set by the city commission to vote bonds of \$2,520,000 to finance the purchase of the water system of the California Water Service Company to operate as a municipal project.

CALISTOGA, Napa Co., Cal.—Until October 10, 7:30 P. M., bids will be received by Calistoga Joint Union High School District, to construct tennis courts; cement pavement, 4-inch thick and 90x118 feet. Grading and filling and packing 275 cubic yards. A 12-ft. fence about the entire court of galvanized wire mesh 1½-inch and No. 18 wire attached to 1½-inch galvanized pipe; 3 gates of 1-inch galvanized pipe; also four net posts set in concrete. Further information obtainable from clerk of district.

STREETS AND HIGHWAYS

EUREKA, Humboldt Co., Cal.—Until October 6, bids will be received by Fred M. Kay, county clerk, to construct road through Hoopa Valley from the Hoopa-Willow Creek road to the Weitchpec road. The project will be financed from funds remaining from the appropriation for the bridge now being built across the Trinity river. A fund of \$70,000 was appropriated jointly by the U. S. government and the county for this work, and it is estimated that about \$3,000 will be left for the road work. Specifications obtainable from Frank Kelley, county surveyor, at Eureka.

SAN JOSE, Santa Clara Co., Cal.—City council declares intention (\$197) to improve Santa Clara street, between Market and Montgomery Sts., also a portion of Pleasant St., involving removal of present surface and replace with 1½-in. asphalt. cem. conc. curbs, gutters, walks; furnish and install 60 (San Jose standard) duplex electroliters together with underground system. 1911 Act. Hearing Oct. 6. John J. Lynch, city clerk. Wm. Popp, city engineer.

OAKLAND, Cal.—Jack Casson, Hayward, at \$0.0169 sq. ft. (\$4,162.55)

awarded contract by county supervisors for 2.6 miles of oil surfacing in Redwood Canyon from the Oakland city limits, involving 245,000 sq. ft. oiling. Complete list of bids follows:

Jack Casson	\$0.0169;	\$4,162
Heafey-Moore019	4,263
Leo J. Immel0174	4,655
Peres and Gatto.....	.04	9,800

OROVILLE, Butte Co., Cal.—Until October 6, 2:30 P. M., bids will be received by C. F. Belding, county clerk, for grading from Sta. 740 plus 60 to Sta. 753+62 on the Oroville-Pentz Magala road involving 11,850 cu. yds. excavation, unclassified. Certified check 10% required with bid. Specifications obtainable from J. A. Humbergarner, county road engineer at Oroville.

OROVILLE, Butte Co., Cal.—Until October 6, 2:30 P. M., bids will be received by C. F. Belding, county clerk, to grade from Sta. 56+50 to 81+50 on the Oroville La Porte road, involving 7812 cu. yds. material unclassified. Certified check 10% required with bid. Specifications obtainable from J. A. Humbergarner, county road engineer at Oroville.

VISALIA, Tulare Co., Cal.—Until September 29, 7:30 P. M., bids will be received by Ida Markham, city clerk, (136-C) to improve portions of west Race St., West Grove St., Highland Ave., North Willis St., etc., involving construction of hydraulic cem. conc. curbs, driveways and sidewalks. 1911 Act. Bond Act 1915. Certified check 10% payable to city required with bid. Plans on file in office of clerk.

SAN FRANCISCO—W. J. Tobin, 527 Balfour Ave., Oakland, at \$3757 awarded contract by Board of Public Works to improve 25th St., bet. Fountain and Burnham Sts., including crossing at Fountain St., involving grading; armored concrete curbs; one-course concrete sidewalks; br. catch-basins; 12-in. vit. pipe sewers; vit. clay pipe side sewers; 6-in. class E conc. pave with 2-in. asphalt concrete surface and 6-in. class F base pave.

STOCKTON, San Joaquin Co., Cal.—Until October 6, 11 A. M., bids will be received by Eugene D. Graham, county clerk, to improve Bacon Island road from the Borden Highway along North Levee of Trapper Slough and along Middle River Levee to Bacon Island Ferry, all in Road Dist. No. 1. Certified check 10% payable to Chairman of the Board of Supervisors required with bid. Plans obtainable from Julius Manthey, county surveyor.

STOCKTON, San Joaquin Co., Cal.—Until October 6, 11 A. M., bids will be received by Eugene D. Graham, county clerk, for clearing site, excavating and extending a culvert at the crossing of Santa Carbonsa Irrigation District's lift line, extending a culvert at J. R. Russell and Bird Roads and constructing three culverts bet. Yarmouth and the Bird road, all in Road District No. 3.

Certified check 10% payable to Chairman of the Board of Supervisors required with bid. Plans obtainable from Julius Manthey, county surveyor.

COLUMBIA COUNTY, Cal.—Until October 1, 2 P. M., bids will be received by C. H. Whitmore, district engineer, State Highway Commission, 502 State Office Bldg., Sacramento, to construct 3 miles of property fence on state highway between Bear Creek and 8 miles west of Williams.

See call for bids under official proposal section in this issue.

September 23, 1930

(1)	11.5 acres clearing and grubbing right of way;	(42)	952 lin. ft. 24-in. corrugated metal pipe;
(2)	116,000 cu. yds. roadway, excavation without class.	(43)	562 lin. ft. 30-in. corrugated metal pipe;
(3)	42,300 cu. yds. roadway excavation without class. (Location B);	(44)	406 lin. ft. 36-in. corrugated metal pipe;
(4)	530,000 station yards overhead;	(45)	188 lin. ft. 48-in. corrugated metal pipe;
(5)	3,307 cu. yds. structure excavation;	(46)	118 lin. ft. corrugated metal pipe (clean and relay);
(6)	13,100 cu. yds. untreated crushed gravel or stone surfacing;	(47)	925 M. gallons water applied to surfacing;
(7)	250 cu. yds. class A Portland cement concrete (structures);	(48)	5.7 miles new hog-tight property fence;
(8)	23,100 lbs. bar reinforcement (structures);	(49)	1,830 cu. yds. screenings in stockpiles;
(9)	756 lin. ft. 8-in. corrugated metal pipe;	(20)	2.2 M. ft. b.m. redwood timber, dense select all heart, grade;
(10)	30 lin. ft. 12-in. corrugated metal pipe;	(21)	8.2 M. ft. b.m. redwood timber, select all heart, grade;
(11)	2,726 lin. ft. 18-in. corrugated metal pipe;	(22)	237 sections finishing roadway;
(12)		(23)	125 each monuments complete in place;

(B) E. C. Coats, \$152,109.10.
(C) Conlouts Construction Co., \$152,953.60.
(D) O. A. Lindberg, \$155,220.20.
(E) Friedrichson & Watson, \$166,766.75.
(F) Lilly-Willard & Blusoff, \$166,256.15.
(G) Grinnell, Fether & Co., \$169,381.
(H) Larsen Brothers, \$179,916.60.
(I) V. R. Dennis Construction Co., \$181,473.25.
(J) Clark & Henery Construction Co., \$183,267.35.
(K) M. J. Beventi, \$184,755.50.

(S) McCray Company, \$208,524.10

SANTA ROSA, Sonoma Co., Cal.—Chas. N. Chittenden, Napa, at 39c cu. yd. awarded contract to grade Hilton road, involving approx. 9,300 cu. yds. excavation.

SANTA ROSA, Sonoma Co., Cal.—W. C. Colley, 25 Northampton Street, Berkeley, awarded contract by county supervisors to grade Lakeville-Sears Point road, Section A, in First Supervisorial District, involving 3,300 cu. yds. excavation, 348c; 1,100 cu. yds. rock surfacing, 748c.

SAN LUIS OBISPO COUNTY, Cal.—Fred Nighbert, 10 H St., Bakersfield, at \$14,998 awarded contract by State Highway Commission to furnish and apply seal coat to existing bituminous macadam surface on 15.4 miles between 1.7 miles west of Shandon and east boundary.

COMPENSATION LAW VIOLATION DRAWS \$25 FINE

Oscar de Masek, Oakland painting contractor, a few days ago paid a fine of \$25 rather than serve a ten days' jail term for failure to provide workmen's compensation protection to his former workman, J. P. Jasven. Jasven, just out of hospital with a broken back received when he fell two stories while working on the job, gets no compensation because of de Masek's failure to make the proper provision.

Members of the construction fraternity can do much to better the building program by educating the public to the fact that the cost of materials is lower now than at any time in the past few years.

Such was the message of Albert V. Weigel, trade commissioner for the Los Angeles Chamber of Commerce, in a talk before the Peninsula Exchange Club last Tuesday.

Weigel, who is making a domestic trade survey throughout the state, pointed to a record made recently in a southern California City. Enthusiasm in all branches of the building industry combined in an advertising and educational campaign that resulted in that city's biggest building program in eight years.

Prospective builders and homeowners were told and retold that building materials were cheap—that a home or building could be constructed for less money now than at any time in recent years.

"The people haven't any money," was characterized as a "hugaboo" by Weigel, pointing out that bank deposits recorded substantial gains during the so-called "period of depression."

Contractor Is Liable For Injuries Caused by Obstructions In Street

A contractor is liable in damages for an injury caused by his negligence in building obstructions in the street. Sometimes the owners of motor vehicles which collide with such obstacles and cause injuries to pedestrians are liable also, but usually the contractor is solely liable, says The Contractor.

In *Fatjo v. Boulet Transp. Co.*, 125 So. 178, it was disclosed that a contractor who had contracted to construct a building constructed a platform of boards across the pavement from the property line and extending into the street some 10 or 12 inches. This platform was used by pedestrians who traversed the sidewalk. The boards of which the platform was built were very substantial but were loosely laid together. While a pedestrian was walking across the platform, a truck owned by the Boulet Transportation Company struck the platform with the left rear hub cap. This caused the boards to be raised up and separated, with the result that the pedestrian was precipitated to the sidewalk resulting in severe injuries. He sued to recover damages for the injuries on the grounds that the contractor was negligent in constructing the platform in such a manner that the ends of the boards protruded 10 to 12 inches into the street, and that the truck driver was negligent in failing to observe the boards.

The contractor was held liable, but the higher court held the truck owner not liable, saying:

"The evidence shows that there was a lot of debris around the building at the time of its construction. . . . The projection of the planking 10 to 12 inches from the curb was such an unusual, unheard of and unforeseeable thing, that no duty was imposed on this negro (driver) to look out for projecting planks. He was in charge of a large five-ton truck and his first and foremost duty was to watch the traffic proceeding and to avoid any injury to that, and he had no more reason to believe those planks were protruding there than he had to believe a bomb was placed ten inches from the curb of the gutter and he had to watch for that bomb."

LONE ARCHITECT BUSY

N. L. Troast of Sitka, the only architect residing in Alaska, has been retained to prepare plans for the Colonel Carl Eielson Building of Aeronautical Engineering to be erected in Fairbanks. At present he is supervising construction of a group of reinforced concrete buildings for the Agricultural Experiment Station at Matanuska, Alaska.

SEPTEMBER BUILDING TOTALS \$1,950,831

San Francisco Building operations during the month of September, 1930, involved an expenditure of \$1,950,831, according to records of the Bureau of Building Inspection of the Department of Public Works. During the month 549 permits were issued. Of these, 418 covered alterations, additions and repairs, estimated to cost \$261,849.

September, 1929, building permits involved an expenditure of \$1,842,015 when 536 permits were granted.

During the past nine months, records of the department show, a total of 5,013 permits were issued for improvements costing \$16,828,724 as compared with 5,462 permits for the corresponding period in 1929 when the total registered \$27,131,995.

Following is a segregated report of the September, 1930, activities:

Class	September, 1930 No. of Permits	Est. Cost
A	2	\$ 245,000
B	3	332,500
C	17	403,753
Frames	108	543,300
Alterations	418	261,849
U. S. Govt.	1	104,432
Total	549	\$1,950,831

GAS USED ON HIGHWAY WORK IS NOT TAXABLE

The California State Supreme Court rules that gasoline burned in vehicles, tractors and rollers of construction equipment used in repairing and constructing highways is not subject to the state gasoline tax.

The court affirmed a \$128 judgment against the state ordered by the Los Angeles superior court in a suit instituted by Oswald Bros. Paving Company. The sum in question had been paid to the state as gasoline taxes.

LUMBER FIRM IS SUED FOR FALSE ARREST

C. D. Plum, lumberman, last Wednesday filed another suit in the superior court at Sacramento for his alleged malicious prosecution on a charge of grand theft in Plumas County in 1927. Plum instituted the action against the Forgy Lumber Company whom, he declares, maliciously caused his arrest for the alleged theft of 300,000 feet of lumber, valued at \$6000. The charge later was dismissed.

Plum states in his complaint the criminal charge was brought to prevent him from filing an appeal for a civil case decided against him in favor of the Forgy Company.

In April Plum sued Alma Langdon, Parradine Kaiser, Leota Mullen and M. C. Kerr in a similar action. He asks \$50,000 in the Forgy action.

Secret Profits And Other Deals Laid To Celotex By Stockholder

William L. McFetridge of Chicago, who claims to own fifty shares of Celotex common stock, has filed a bill in the Superior Court at Chicago asking that a receiver be appointed for the Celotex Company, which he claims is insolvent.

Defendants named are the Celotex Company, B. G. Dahlberg and nineteen other directors. Dahlberg & Co. and the Dahlberg Corporation of America. The bill also asks that an accounting be had of the individual defendants.

This bill alleges that B. G. Dahlberg, president of the company, and a hand-picked board of directors, made more than \$10,000,000 in secret profits under guise of furthering financial condition of the company.

According to the bill, Dahlberg and associates, when contemplating organization of the Celotex Company, obtained options on land and equipment, which they sold to the Celotex Company at a cash profit of \$5,000,000, and received in addition 82,000 shares of stock worth another \$5,000,000. The bill says the property cost the company ten times more than its actual value.

The complaint also alleges that sugar mills and plantations in Louisiana, Cuba and Porto Rica were acquired by Dahlberg and in the face of a ruinous sugar market unloaded on the Celotex Company at a further secret profit. In addition, it is stated that large sums were spent in developing the West Coast Company, a subsidiary which was later abandoned at a great loss, and that another subsidiary, the South Coast Company, is in receiver-ship.

BOULDER DAM JOBS ARE NOT AVAILABLE

No jobs are available in connection with the Boulder Dam project it is announced by the U. S. Civil Service Commission.

The Commission points out that contracts for the construction of the major portions of Boulder Dam, recently named Hoover Dam, will not be let by the Interior Department for "a year or more."

"The bureau of reclamation and the civil service commission regard it as necessary to emphasize this to correct a general impression that a large construction force is to be organized at once or is already at work," the Commission's statement declared.

The Commission announced it had completed the task of examining and certifying eligibles for appointment as junior engineer for work on the dam and that it expected to finish within a few weeks the examination and certification of engineers of the higher grades.

ARC-WELDING ADVANTAGES IN ERECTION OF TALL BUILDINGS

By Gilbert D. Fish

Welding for building construction is receiving considerable attention in connection with proposed modification of building laws in New York and some other cities. The interest of the public, as reflected by the press, is concerned chiefly with the noise-elimination feature of the welding process, rather than with cost-saving or technical advantages.

Many cities and towns have already permitted welded building construction, in most cases without any changes in or additions to their building ordinances. Important instances can be cited in Newark, Boston, Philadelphia, Atlantic City, New Haven, Cleveland, Dallas, Los Angeles and Albany, but most if not all of the welded or partly welded buildings in these cities have been regarded by the authorities as special examples which did not commit them to recognizing the welding method for building generally. The largest all-welded building is the new 11-story Westinghouse laboratory at East Pittsburgh, where no ordinances govern construction methods, and several other record-making operations have been carried out in small towns where there has been no opportunity to establish valuable legal precedent.

It is noteworthy that welded building practice has grown and set a fine record of success in the face of serious interference by building ordinances in our largest cities. This obstruction has retarded the use of welding for commercial buildings more than for industrial buildings and has had a great deal to do with the low average of welded structures. The first large welded structure of any kind was the Westinghouse factory at Sharon, built 4 years ago; it was 80 feet high. The Sharon building was not approached in height by any other welded structure until the Yale Library Book Tower, 135 feet high, and the 13-story addition to the Homestead Hotel at Hot Springs, were erected in 1928. The new Boston Edison building, shop riveted and field welded, is 15 stories; the recently erected Edison Building in Los Angeles, mainly of welded construction but containing some shop rivets, is 12 stories.

Welding Tall Buildings

At a time when competition in high building construction is bringing into existence office buildings taller than the historic Eiffel Tower, it would be surprising if welded structure of 12 to 18 stories should greatly impress the public, even though thoughtful engineers realize that any limitation of the welding process making it unsuitable for tall structures would have become apparent in the fairly high buildings already constructed. It is precisely because welded structures of great height have not yet been built that certain tremendous advantages of welding over riveting for that class of work have not yet been realized in practice or recognized by more than a few engineers. Quite recently, in connection with proposed modifications of the New York City Building Code, there appeared in the press an expression of opinion, attributed to a group of engineers, to the effect that experience and precedent justify the use of welding in "structures of

Address of Mr. Fish, consulting structural engineer of the Westinghouse Electric & Manufacturing Company, before the New York Section of the American Welding Society, Sept. 16, 1930.

medium height where no wind stresses are involved.' This reservation seems to me unfortunate and misleading, because tests and practice have proved the superiority of welded joints over riveted ones for resisting the kinds of stress caused by wind. There is evidently an immediate need for stating in the plainest possible terms the reasons why welding possesses outstanding advantages for wind bracing, and why welded construction can definitely be pronounced suitable for buildings of extreme height.

Tall buildings are distinguished from low ones of heavy columns and by bracing designed to resist pressure from high winds. The upper half of a 30-story building is, in the structural sense, a 15-story building and is designed as such; the lower half is very different from a 15-story building because of the weight of the stories above with their contents and because of the wind pressure which must be transmitted from the upper stories to the foundation.

If architectural considerations did not forbid, wind bracing for very tall or very slender buildings would generally be accomplished by placing X-bracing in some of the vertical panels formed by columns and floor beams, thus forming vertical trusses capable of transmitting the horizontal wind forces to the foundation without inducing bending stresses in the members or connections. As the X-bracing method can but rarely be used, wind bracing is usually provided by making the beam-to-column joints strong enough in bending resistance to prevent collapse of the rectangular panels. Although there are numerous conflicting theories as to the distribution of wind bracing stress among the many joints in any one floor of a building, it is usually nearly true that the aggregate of wind bending moments in the joints of a given floor equals the total wind pressure above that floor, multiplied by the story height. A building does not need to be uncommonly high to have serious bending stresses in the joints of its lower stories.

Bending Resistance

The commonest way to provide bending resistance in a riveted joint connecting a beam to a column is to connect both top and bottom flanges to the column by means of angles or other connecting pieces riveted to the flanges of the beam and to the column. Bending stresses due to wind are resisted by a pair of horizontal forces at top and bottom connections, one force developing tension between beam flange and column and the other force compression. These forces alternate with reversal of wind direction, so that both connections act sometimes in tension and sometimes in compression. The limit of bending resistance of such a joint is generally governed by the strength of top or bottom attachment in tension, which tends to pull the connecting member out of shape and elongate the rivets

of the column connection. Sometimes, when the connection is very heavy and contains many rivets, the limit of resistance is governed by the tensile strength of the beam flange, weakened by rivet holes. Triangular gusset plates or diagonal knee-braces are occasionally employed as reinforcement to increase the strength and stiffness; they are expensive and architecturally objectionable in most cases.

Any one of several forms of welded beam-to-column connections can be made to develop any required bending resistance, up to the limit of strength of the main members, which are not weakened by rivet holes. Such a connection is simple, compact and reasonable in cost; in no case does it require projecting gusset plates or knee braces, unless for the purpose of reducing the stresses or the deformations in the main members. One photograph of such a connection is sufficient to illustrate the general fact. Such a joint has no element which can work loose or permit high local strains such as are common in riveted connections used for the same purpose; it follows that a building frame, braced by properly designed welded beam-to-column connections, cannot drift due to play or flexibility in the joints; all of the drift or deflection of such a frame is due to elastic deformation of the framework as a whole. For the sake of comfort of occupants of the upper stories of very tall buildings, it is sometimes necessary to confine the drift caused by wind within narrower limits than are imposed by strength requirements alone. Whereas stiffness rather than strength is the criterion for wind bracing design, welding has the advantage of greater stiffness than riveting. The taller the structure, the stronger the reasons for preferring welded wind bracing.

Flexibility

For some classes of joints commonly occurring in building frames, flexibility is necessary to avoid dangerous secondary stresses, and in such cases welded joints should be designed for flexibility of the same order as is found in riveted joints used for the same purposes. Wind bracing connections do not fall under this heading; they should be made rigid, and no drawback of any sort results from making them so. Beams connected to columns by very rigid wind connections, whether welded or riveted, are fixed or continuous beams and should be designed as such to carry floor loads and wind load combined. The prevailing American practice of treating riveted beams as simple or unrestrained in their action under floor loads leads to serious inconsistencies in design when the connections are made very rigid to resist wind. Whereas ignoring partial restraint at end connections results in error on the side of safety in designing beams for floor load only, the error is on the danger side in designing beams to resist wind bending and floor loads at the same time.

The properties of welding result in advantages for wind bracing purposes, as follows:

Continued on page 24

VISITORS ON JOB MUST WATCH STEP

If your business calls you to a place where building is going on, the law expects you to look out for the unexpected. So be careful. Watch your step. And, more particularly, look where you are stepping. For you may step onto a piece of lumber, on a keg of nails, or upset some hot lead and get hurt. And if you do, you cannot recover damages from the contractor.

Such is the effect of a ruling just made by Superior Judge Leon R. Yankwich of Los Angeles county in denying Don Wood, a salesman for a local refrigeration company, damages against J. N. Fickling, local contractor. Wood sued Fickling for \$10,248 on account of injuries he suffered when he stepped into a pot of hot lead, such as plumbers carry around in their work.

The accident occurred June 27, 1929, at an apartment building which was in the process of construction and on which Fickling had the plumbing contract. The circumstances under which it occurred were rather unusual. Wood had gone to the place to talk to R. N. Carson, who had the general contract for the building of the apartment house. While he was talking to Carson, Wood stood in the doorway of a small shed, used by Carson as an office and as a repository for tools by all the subcontractors.

It was 4:30 in the afternoon and the workmen began quitting. A plumber carrying some tools asked Wood to let him pass. He no sooner did than another said, "Please let me get by." This time Wood, instead of keeping his place or stepping inside, stepped backward onto the sidewalk without looking.

The workman who had placed the pot of lead on the ground stated that he did so because he saw Wood in the doorway. As he had other tools to bring up, he decided to leave the lead near the wall and go after them. He claimed that when he put the pot near, he shouted, "Look out for hot lead." Wood claimed he did not hear the warning. At the conclusion of the case, Judge Yankwich gave judgment for Fickling.

"To place hot lead on a sidewalk might, ordinarily, be negligence in itself," said Judge Yankwich. "However, we are not dealing with the rights of a person who uses the sidewalk. We are dealing with a man who went his way, where the construction was going on. At such a place one must be on the lookout for such things as workmen might drop in their tracks. Even assuming that it was careless on the part of the workman to put the lead on the sidewalk, and that he gave no warning, Mr. Wood's act in stepping backward, without looking, is the chief cause of the injury and contributory negligence which bars recovery. Had he abated, he could have walked onto the sidewalk safely, even if he had not seen the pot of lead, which was out of his way. Instead, he did not look, took two steps sideways and, literally, walked into the pot of hot lead which was out of his way. Much as the court regrets cases where persons suffer painful injuries and cannot be compensated, the court cannot place liability on others for injuries which, through one's own negligence, are self-inflicted." — (South-West Builder and Contractor).

SUB-CONTRACTOR IS SOLELY LIABLE FOR INJURY TO HIS MEN

Usually sub-contractors are required to furnish compensation insurance for their employees and the principal contractor is not liable for injuries sustained by the workmen

employed by the sub-contractors, says The Constructor.

It was shown in Johnson v. Mortenson, 147 Atl. 705, that a principal contractor took a contract to construct a building. He sublet to a sub-contractor the work of digging excavations and trenches to install the sewer connections. One of the sub-contractor's employees named Pascoal was seriously injured when a trench caved in. Both the principal contractor and the sub-contractor were held liable by the commissioner of the state workmen's compensation laws to pay compensation to the injured workman. The principal contractor sued the sub-contractor to recover the amount of the compensation that he was compelled to pay.

It is interesting to observe that the court held the sub-contractor liable to the principal contractor and said:

"No relation of employer and employee existed between Johnson (principal contractor) and Pascoal (injured employee). . . . Where a guarantor, who has entered into a contract of guaranty at the request of or with the consent of the principal obligor, pays or is compelled to pay his principal's debt, that law raises an implied promise . . . on the part of the principal to reimburse the guarantor and on the payment of the debt the guarantor at once has a right of action against the principal for reimbursement of the amount which he has paid. . . . The same principle dictates that, when one has been required to pay money which another, as between them, was under a primary duty to pay, the former should be enabled to obtain reimbursement. . . . The plaintiff (principal contractor) is entitled to recover from the defendant (sub-contractor) any sums which he has paid."

HARDWOOD LUMBER ASSOCIATION HOLDS ANNUAL MEETING

At the recent annual meeting of the National Hardwood Lumber Association at Toronto, Canada, John I. Shaffer of South Bend, Ind., was elected president.

The report of Secretary-Treasurer L. S. Beale showed the membership to be 1067, a decrease of 11 per cent during the last year. About half the members are manufacturers and the others are engaged in the resale of hardwood lumber.

Despite adverse business for the last year the association has done better than most trade associations. The association now has 59 inspectors, including the chief inspector, in the inspection department.

A total of 117,987,800 ft. of lumber was inspected last year, 63,347,300 ft. less than during the preceding year.

The revised inspection rules were adopted after proposed changes having to do with worm holes, wane and number of cuttings had been eliminated at the request of the furniture manufacturers.

ANTI-PANIC DOOR INVENTED BY ARCHITECT

Walter E. Kelly, architect of Portland, Ore., has invented and will shortly place on the market an anti-panic bolt for exit door equipment, which is said to surpass the standard brands, both in beauty, simplicity and ease of operation. It is described as simple in application, readily adjusted and positive in action and is especially praised for its ease of operation under adverse circumstances, such as heavy pressure thrown against the door by a panic-stricken audience. The Kelly anti-panic bolt is so designed that a very slight pressure upon the bar will release the bolts under the heaviest strain.

BRING COSTS OF HOMES WITHIN REACH SAYS R. E. EXECUTIVE

That the burden of taxation rests too heavily on real estate was the opinion presented by Leonard J. Reaume, President of the National Association of Real Estate Boards before the Mortgage Bankers Association Convention at Detroit.

"The auto has created additional expense for roads and streets but real estate should be made to bear the total cost of providing highways for vehicles," said Mr. Reaume. Many associations and individuals are studying possible solutions for this problem, and are investigating whether or not the state income tax, sales taxes and miscellaneous city revenues could relieve the tax burden on real estate. Mr. Reaume urged the Mortgage Bankers Association and other national associations by increasing membership and by contributing small sums of money to undertake researches and analyses of home ownership and home building problems in order to achieve a solution of the problem of individual ownership of homes.

"The prices of homes must be brought within the reach of the pocketbook of the great majority of our public," he said. "Statistics show that the average annual earnings in the United States is between two and three thousand dollars. These men cannot afford to put more than \$500 a year into buying a home. We must devise a scheme of mass production of homes to keep costs down to the measure of the average citizen's purse."

"The next few years we will bring new forms of financing longer term mortgages, greater consideration given to moral and financial responsibility and the probable development of new types of life insurance to aid in paying for a home. I would rather lend \$5,000 in two \$250 mortgages on small modest homes sold to families who could afford to pay for them than to lend \$5,000 on a good attractive \$10,000 home sold to a family who would not afford to pay for it."

"In the past we have concentrated our attention principally on the physical assets in making loans—not only on small homes, but on large projects. In making loans on income property, not only should the physical aspects of the structure be considered, but the responsibility of the borrower; the suitability of the project and the control of good management by the lender. Bad management has ruined many good projects."

APPEALLE COURT UPHOLDS BUILDING INSPECTOR

The State Appellate Court (San Francisco) upheld the action of M. C. Woodruff, city building inspector of San Jose, in refusing a building permit to Frank Lima for a combined store and residential structure. Lima, after being refused the permit brought suit against the city.

Last year Lima presented to Woodruff a tentative plan for a combined store and residential structure. Woodruff stated that there was no ordinance preventing such a building in the location. Delaying completion of the plans, Lima did not make definite application for a permit until two or three months later. Meanwhile, a zoning ordinance had been passed which prohibited such a building in that location.

Action was brought by Lima to compel the issuance of a permit, with the result that the court upheld Inspector Woodruff, because Lima's application had not been made in writing.

THE OBSERVER

What He Hears and Sees on His Rounds

Secretary Lamont estimates that fifty billion dollars will be spent on new residential construction in the United States the next 20 years, and in maintenance and repairs of houses. He was discussing plans for a national conference on home building and home ownership which President Hoover has called.

"With recent drops in prices of building material, an ample number of highly skilled building workers available, contractors anxious to obtain work and mortgage money available at reasonable terms," the commerce secretary continued, "conditions now are favorable for home builders who have the resources and intend to build to go ahead. In general, conditions are also good for going ahead with repairs, alternations and improvements."

An average building height of not more than ten stories on a maximum of 40 per cent of the gross land area is the greatest building density which any section of the borough of Manhattan, New York City, can tolerate without exceeding the limitations of the existing street system and the possibilities of transit development, is the conclusion reached by the Regional Plan of New York in a report made public Sept. 22. An ideal apportionment of the ten-story average, the report suggests, would be six-story buildings on three-quarters of the area available, with skyscrapers on the remaining quarter.

Speaking of unemployment in the construction industry very few stop to give a thought to the fact that when there are 1000 building trades mechanics out of work there is in proportion the equivalent in number of contractors who are not doing a thing, many of whom have not had a job this year, while many more have taken a job almost at loss, says the monthly bulletin of the National Association of Building Trades Employers. In many instances contractors have taken work this year with hardly enough to cover their overhead charges and find in the end that they made a contribution to the owners for the favor of being permitted to do the work for them. Yes, there are quite a number of unemployed contractors who are looking and hoping for a change not only to use their own talents profitably but to give employment to the hundreds of their old employees who today are without work.

"The building habits of this country are being changed by the decentralization of our large metropolitan centers," says the monthly digest of the Common Brick Manufacturers Association of America.

"The effect of this will not be noticed until some of the unfavorable features surrounding the building industry are overcome or remedied."

"During the past decade the number of people living in cities rose to 36 million, or more than one-fourth of the country's entire population.

"The rapid rate of increase in our large cities necessitates many of them being entirely rebuilt.

"Land values determine the structure that shall be placed on them and it is not uncommon to tear down old office buildings and replace them with modern structures twenty, forty and sixty stories high.

"This trend also has its influence in residential construction and development. Rapid transit and subway systems bring suburban sections within living distance of our large centers.

"It is no longer necessary to live in congested districts or undesirable living quarters in order to be within close range of one's work. Modern transportation serves a forty-mile radius with such speed and comfort that entirely new cities are springing up rapidly along an ever-widening circle around the large centers of industry.

"There is every indication that an upturn in building construction is not far distant and there is substantiating evidence on all sides to definitely point out the general revival from the psychological depression this country is going through.

"The shipments of brick during the past thirty to sixty days show seasonal increases, but the general volume is somewhat below last year's consumption."

Promotional activities of contractors and paving companies and the over-zealous ambitions of local chambers of commerce in urging street improvements, were criticized at the opening session of the seventeenth annual convention of the International City Managers Association by William J. Locke, secretary-manager of the League of California Municipalities, who declared the special assessment method of financing has been much abused in California.

"The promotional activities of contractors and paving companies whose interests are based solely on the profit to be derived from the work have undoubtedly been answerable for many unwarranted projects.

"The over-zealous ambition of chambers of commerce has also been the moving factor in many cases for much untimely work. The method has been abused to such an extent in some places that remedial laws are certain to be enacted at the next session of the legislature to curb the ambition of self-seeking promoters."

License to construct a system of power projects on the North and South Forks of Battle Creek in Shasta County, is asked of the Federal Power Commission by the Pacific Gas & Electric Company which concern seeks authority to construct a system consisting of the so-called Coleman, South, Inskip and Volta plants, six reservoirs, several canals and eight transmission lines. The output of the power plant would be 20,400 horsepower. The power would be sold in Superior California.

An increase in this year's outlay by the Federal Government for roads and other permanent improvements over the expenditures for 1929, when \$352,436,000 was spent, is predicted by Dr. Leo Wolman in the chapter on "Federal Construction" of his survey entitled "Planning and Control of Public Works," which has been made public by the Committee on Recent Economic Changes.

"The experience of the Federal Government in the past six months," writes Dr. Wolman, "furnishes convincing evidence that the prevailing system of appropriations and expenditures is sufficiently elastic to permit

occasional acceleration in construction operations when haste and expansion are desired by the government. The removal of various barriers to quick action and the increased appropriations for roads and other projects will without doubt raise the total federal expenditures for construction in 1930 considerably above the amounts spent in 1929."

Dr. Wolman's survey was conducted at the request of President Hoover by the National Bureau of Economic Research and the Department of Commerce and is a continuation of the one made by the National Bureau which was made public a year ago by the Committee on Recent Economic Changes.

A series of advertisements by Frederick E. Stiles of Grand Rapids, Mich., head of a firm dealing in builders' supplies, appearing in Sunday issues of the Grand Rapids Herald, have attracted attention. The advertisements, six columns wide and a page deep contain arguments relative to the industrial stability of Grand Rapids and the country as a whole.

Mr. Stiles urges persons who hesitate to purchase goods, or to spend money in any way, because of timidity induced by so-called "hard times," to "buy now" and express their confidence in the inherent soundness of the nation's business structure. He maintains that the present depression is largely psychological. Carl Chapin, Chicago advertising man, in a congratulatory letter to Mr. Stiles, said: "I wish a thousand merchants throughout the country would start selling the United States and their own communities as you have, and preach that passive belief isn't enough; that people have got to do something about it; that buying the things they need is the best way to show belief."

The American Lumberman, trade journal, offered editorial praise to Mr. Stiles, as follows: "These advertisements are an excellent example of the use of printer's ink in restoring confidence in the financial soundness of the United States."

The advertisements have been printed in the Herald each Sunday for the past two months and will probably continue until late in the fall.

According to the September issue of the Monthly Labor Review, issued by the U. S. Department of Labor, a study about 400 agreements of building-trades unions relative to the provisions governing the practice of union members doing outside work, usually referred to as "contracting," shows that this practice is very generally recognized by the building-trades unions as unfair to the legitimate employers, and many collective agreements specifically prohibit contracting or provide for definite control of the conditions under which the individual worker may undertake outside work. Such provisions were included in practically all of the agreements of the carpenters, electrical workers, and painters and in a large number of the agreements of lathers, plasterers, plumbers, roofers, and sheet-metal workers.

The de Florez system of remote manual control by the application of Selsyn motors, by means of which the operator can retain the actual "feel" of the mechanism being operated, is described in bulletin 7520 of the Brown Instrument Co., Philadelphia, Pa.

ALONG THE LINE

Architect Frederick H. Reimers, formerly located in the Franklin Bldg., Oakland, announces the opening of new offices at 233 Post St., San Francisco.

Charles J. McNeley, 57, for many years an electrical engineer on the Panama Canal, died in Nashua, N. H., Sept. 20. McNeley was awarded a medal by President Roosevelt for devotion to duty during construction of the canal.

A. G. Breitwieser, Sr., manager of the Lassen Lumber and Box Company at Susanville, is recovering from cuts and bruises he received when his automobile side-swiped a truck on the

Andrew Moore, 76, retired engineer and former president of the Moore Shipbuilding Company, died at his home in Berkeley, September 24. A daughter, two sisters and two brothers survive.

Edwin J. Symmes, Bakersfield architect, announces he will continue the practice of architecture in the former offices of the firm of Symmes and Cullimore, which firm was recently dissolved. The offices are located at 215 Habersfelde Building, Bakersfield.

Leo O'Hara of Antioch has been appointed city engineer of Walnut Creek, Contra Costa County. Mr. O'Hara succeeds Ross L. Calfee of Richmond who held the position for two years. Walnut Creek has an extensive water and street paving program under way.

Charles F. Van Dame, veteran California lumberman and founder and president of the Richmond and San Rafael Ferry & Transportation Company, died in a San Francisco hospital, last Thursday. Mr. Van Dame recently returned from a trip to Germany, where he was operated upon for an intestinal ailment.

The Tehama County Supervisors, acting on the suggestion of a citizens' committee that the county charter be amended to provide for the creation of the office of county road engineer, have decided to place the proposal on the November ballot for action by the voters. The position would pay \$3600 a year.

Water development, a key factor in California's economic future, is featured in the exhibit of the California State Chamber of Commerce at the Ferry Building, San Francisco. Maps and photographs of mammoth water projects, vital to the prosperity of the State, in conserving the snows of the Sierra Nevada and Rocky mountains for irrigation, hydro-electric power, and domestic use, are on display. These include scenes of the construction of Hetch Hetchy, San Francisco's water and hydro-electric project, which will furnish 400 million gallons of water daily to 4,000,000 people in the San Francisco peninsula, and develop 250,000 hydro-electric horsepower, as well as data on Boulder Dam, depleted by a map of this project, which will supply 1,095,000 acre feet of domestic water per year to Southern California cities.

TRADE NOTES

Taylor Paint Manufacturing Company, formerly located in the Builders' Exchange Bldg., Oakland, announces the removal of its offices to larger quarters at 1000 E. 12th St., that city. The factory is located at 88th Ave. and B St. and branch stores at 5684 San Pablo Ave. and 8801 E. 14th St., Oakland.

The petition seeking dissolution of the E. C. Fisher Lumber Company of Oroville will be held November 4 by Superior Judge H. D. Gregory at Oroville. The company's mill was recently destroyed by fire. All claims against the company have been satisfied, the petition for dissolution states.

J. E. Strain of Marysville, operating under the firm name of Oak Valley Lumber Co., announces dissolution of the business.

The Santa Cruz Portland Cement Company on September 17 ordered a regular dividend of \$1 a share, payable October 1 to stockholders of record September 20.

Meyers & Barnett, carrying a complete line of hardware and implements, has opened quarters at Main and American Sts., Stockton. The quarters were formerly occupied by the Stockton Hardware & Implement Company.

Engdahl Brothers of San Francisco have opened a branch store at 431 Florence street, Redwood City, and will carry a complete line of paints, lacquers, varnishes, enamels and wall paper. The branch will cater to both wholesale and retail trade.

Directors of the Pacific Portland Cement Company have declared the regular quarterly dividend of \$1.62 1/2 per share on the preferred stock. The dividend will be payable October 4 to stockholders of record Sept. 30.

A. S. M. E. ELECTS OFFICERS FOR ENSUING YEAR

Roy V. Wright, managing editor of Railway Age, New York, has been elected president of the American Society of Mechanical Engineers.

Other officers elected are as follows: Vice-presidents, W. A. Janley, chief engineer, Eli Lilly Co., of Indianapolis, Ind.; Thos. R. Weymouth, president of the Oklahoma Natural Gas Corp., of Tulsa, Okla.; and Harvey N. Davis, president of the Stevens Institute of Technology, Hoboken, N. J.

Managers, W. L. Batt, president of the S. K. F. Industries, Inc., New York; H. L. Doolittle, chief designing engineer, Southern California Edison Co., Los Angeles; H. L. Whittemore, Chief, Engineering, Mechanics Section, Bureau of Standards, Washington, D. C.

Representatives, American Engineering Council, W. R. Webster, Bridgeport, Conn.; R. V. Wright, New York; N. Y.; J. N. Van New York, N. Y.; Robert Yarnall, Philadelphia, Pa.; E. N. Trump, Syracuse, N. Y.; B. E. Hull, Houston, Texas; E. O. Eastwood, Seattle, Wash.; W. Trinks, Pittsburgh, Pa.; Warner Seely, Cleveland, O.; and Wm. S. Conant, Washington, D. C.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton O. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1884).

R-3190-S SALES ENGINEER, graduate in civil engineering, not over 30 years old, to develop the sale of steel bars and building materials. Experience must be in construction or sales, preferably both. Apply by letter with details of experience, education, etc., including photo. Salary open. Location, Pacific Coast. Headquarters, San Francisco.

W-499-C-S CIVIL ENGINEER, graduate with experience in the design and construction of sewers and water works to purchase an interest in an engineering business. Some experience in field of experience, salary, etc. Location, Kansas City.

K-297-W-1288-C-S ENGINEER, young, either employed now or recently employed on design of hydraulic equipment particularly centrifugal pumps. Apply by letter giving all details of experience, salary, etc. Location, Middlewest.

R-3309-S ENGINEER, mechanical or electrical, not over 30 years, with 3 to 5 years' experience on hydro-electric plant operation for service and testing work. Must have mechanical skill, agreeable personality and be willing to travel. Salary about \$175 month and expenses in the field. Apply by letter. Headquarters, San Francisco.

R-3220-S ENGINEER, college graduate in mechanical, chemical or mining preferred. Must not be over 35 years and with at least five years' experience designing and estimating industrial plant equipment. Salary \$250-275 month. Permanent. Location, Bay Region, and only local applicants can be considered for interview.

R-3333-S CHEMICAL ENGINEER, graduate, with 1-3 years' experience for research work on development of plant equipment. Excellent opportunity for man with thorough chemical engineering training and with more than average ability. Salary \$150-175 month to start. Apply by letter. Location, Southern California.

STEEL FURNITURE

August shipments of steel-furniture stock goods, as reported to the U. S. Department of Commerce by 34 manufacturers in the "business group," totaled \$1,966,795 as compared with \$1,812,646 in July, \$2,482,594 in August, 1929, \$2,564,638 in August, 1928 and \$2,474,854 in August, 1927. August shipments of shelving, compiled from reports of 16 companies, totaled \$58,797 as compared with \$609,680 in July, \$89,947 in August, 1929, \$836,105 in August, 1928 and \$604,107 in August, 1927.

Real estate market activity for August is indicated by the figure 69.6, according to the index of real estate market activity compiled monthly by the National Association of Real Estate Boards. The index is based upon official reports of the total number of deeds recorded in 63 typical cities throughout the country. Real estate activity for the year 1926 is taken as the base year in computing the monthly figure.

Private Contractors To Build Boulder Dam

Speed all along the line will characterize the construction of Boulder Dam, christened the Hoover Dam by Secretary of the Interior Wilbur in honor of the President.

Just at the time when Secretary Wilbur was driving a silver spike to begin operations on the connecting railway, amid picturesque surroundings, the Commissioner of Reclamation at Washington was authorizing his chief engineer at Denver to appoint fifty engineers, principally civil, and a few electrical and mechanical, for preliminary work on designs and estimates.

The Civil Service Commission is establishing time records in supplying eligibles for these positions. A few weeks after the Commission received the call for the junior engineers, the examination process was completed and the certified eligibles were in the hands of the Commissioner of Reclamation. The higher grades of engineers, for which the call was made later, will be ready for certification in a few weeks more.

Contracts for preliminary construction and development work will be awarded soon, according to a statement made by the Bureau of Reclamation. Contracts for the major features will not be let for a year or more. The Bureau of Reclamation regards it as necessary to emphasize this to correct a general impression that a large construction force is to be organized at once or is already at work.

It is expected that practically all construction work will be let to private contractors. Under this plan the contractors will make the greater number of employments.

This huge engineering task, for which \$155,000,000 expenditure is authorized, has three purposes, namely, reclamation of arid lands, power development, and flood control. Its possible benefit to the Southwestern section is beyond estimation. It is expected that the power generated will be transmitted as far as Los Angeles. It is the biggest thing in the United States since Muscle Shoals, and one of the biggest since the Panama Canal.

CALIFORNIA MUTUAL TO OPEN NEW QUARTERS

Formal opening of the new home of California Mutual Building & Loan Association, at 775 Market Street, San Francisco, has been set for October 23, according to announcement yesterday.

The California Mutual will be the first building and loan association in San Francisco to own its own home, and the fifth on Market Street within a radius of three blocks.

The new structure, which is now rapidly nearing completion will be one of the most artistic buildings on Market Street, consisting of three stories and basement and representing an investment of \$275,000.

Elaborate plans are being made for the dedication of the new building.

Santa Monica Harbor Company, capitalized for \$2,500,000, has filed articles of incorporation with the Secretary of State at Sacramento. The company, organized to construct harbors and promote regattas, will maintain headquarters in Los Angeles. Directors of the company are D. Button of Glendale and E. J. Opsahl, L. H. MacHenry, E. A. Helwig, E. Brown, F. E. Swain and M. Langstaff, all of Los Angeles.

U. OF C. PROFESSOR HEADS FOREST UNIT

Francis X. Schumacher of the Division of Forestry, University of California, has been appointed chief of the section of forest measurements in the Forest Service, according to announcement by R. Y. Stuart, Chief Forester, Washington, D. C. In his new capacity, Mr. Schumacher will face the knotty question of how to measure the productive capacity of the various types of forests of the United States in terms of lumber and other products. He will assume his new duties on October 1.

Mr. Schumacher studied forestry at the University of Michigan and served for a time in the Forest Service in the Intermountain Region. During the World War he was commissioned 1st Lieutenant of the 148th Infantry, 37th Division, was wounded in the Ypres-Lys drive, was decorated with Distinguished Service Cross and Belgian Croix de Guerre, and is now captain of Reserves. Later at the University of California, he carried the study of forest mensuration to the forests of the Pacific States, devising new tests and methods of measurement and crop determination. Published results of his investigations have won him national recognition. By methods he is developing, the Forest Service expects to improve its work in computing the present and future crops of timber and forest products, with reasonable accuracy, for 20, 40 or 100 years ahead. The work has a great deal of bearing on present forest and economic problems.

\$4,000,000 PLYWOOD FIRM IS ORGANIZED

A \$4,000,000 organization for the manufacture and merchandising of plywood with four of the outstanding Pacific Northwest plants in the consolidation, is announced at Tacoma, Wash.

The new firm will be known as the Oregon-Washington Plywood Company and have its headquarters in Portland.

The plants affected are the Portland Manufacturing Company at Portland, Walton Veneer Company at Everett, Tacoma Veneer Company at Tacoma, and Elliott Bay Mill Company at Seattle.

The officers of the new consolidated company are as follows:

Harry T. Nicolai, Portland, president and general manager; Thomas Autzen, Portland, vice-president; C. L. Spencer, Seattle, vice-president; Eslie Q. Walton, Everett, secretary and treasurer.

The local management of the respective plants will be as follows:

Portland Manufacturing Company at Portland, Jens Lingaas, manager; Tacoma Veneer Company at Tacoma, Philip Garland, manager; Walton Veneer Company at Everett, Eslie Q. Walton, manager, and Elliott Bay Mill Company at Seattle, Bruce Clark, manager.

All sales will be handled from the Portland office under the direction of Fred W. Kienzie, sales manager.

Total assets are approximately \$4,000,000. There will be no public financing.

A lack of purchasing power by wage workers is blamed in the American Federation of Labor's weekly news bulletin, for the industrial depression.

"Theorists may quibble over the distinction between overproduction and underconsumption," the bulletin says, "but no practical person denies wage workers have not the money to buy."

The publication adds that if the depression would be ended, principles of high wage and shorter hours must be applied.

GOOD PAINTING PROTECTS STEEL FRAMES

The value of the use of good paint is best emphasized by results obtained from examination of a building built four years ago, says David N. Oltarsh, consulting engineer of New York City.

A very tall structure of fireproof construction, the 40-story Court and Montague Building in Brooklyn, had its columns and girders exposed for an alteration after standing only four years and it was found that all the paint had come off and the steel had begun to show corrosion. There is only one way to account for this condition, and that is that the specifications were not lived up to and the general contractor, to save money, permitted the structural steel contractor to work in his own way.

As an example of good paint applied I can mention the Prudence Building, at 43rd St. and Madison Ave., New York City. The present Prudence Building is a combination of the old Charles Building and the new structure to the south of its corner building. The old Charles Building, at the southeast corner of Madison Ave. and 43rd St., was built 30 years ago. Six years ago, to alter the building and make the new addition, it became necessary to strip the columns. The writer, as engineer for the Prudence company, found that paint on the columns and the structural steel in such good condition that it looked as if the paint had been put on the day before.

It is my opinion that all fireproof buildings should be supervised by the architect or engineer in order to assure proper construction and guarantee the results sought for by the design. One cannot obtain good results when the dollar mark is the big factor and the builder is permitted to do as he pleases in order to save money here and there. It is such little matters, not thought of at the time, which shorten the lifetime of a building.

CALIFORNIA WATER SERVICE COMPANY EARNINGS

Increasing profits of the California Water Service Company, which operates water systems in Superior and Central California are shown by its financial report for the year ending August 31, 1930.

The company's gross revenues increased from \$2,092,127 for the previous year to \$2,156,850 for the past twelve months.

Operating expenses, maintenance and taxes other than federal income tax, totaled \$1,053,985 for the year ended August 31, 1930, against \$1,069,104 for the preceding twelve months.

Gross corporate income amounted to \$1,142,360 for the period ended August 31, 1930, as compared with \$1,035,913 for the year ended August 31, 1929.

LOS ANGELES TO VOTE ON POWER AND SEWER BONDS

The city council of Los Angeles has set November 4 to vote on the proposal to issue bonds of \$13,300,000 for power development. The greater portion of the money would be used to augment and improve power facilities in the city's Owens valley water and power system. Survey, and acquisition of a right of way for a power transmission line from Boulder canyon dam to Los Angeles.

A separate proposal on the November ballot will provide for the issuance of \$6,000,000 in bonds to finance construction of sewers in various sections of the city.

APARTMENTS

Preparing Working Drawings.
APARTMENTS Cost, \$250,000
SAN MATEO, San Mateo Co., Calif.

Location Withheld.
Six-story and basement class C steel frame, brick and concrete apts. (21 2- 3- 4- 5- 6- 7- and 8-room apts.)

Owner—Name Withheld.
Architect—Willis Lowe, 354 Hobart St., Oakland.

Bids will be taken in about 30 days.

Preparing Working Drawings.
APARTMENTS Cost, \$60,000
SAN FRANCISCO, 45th Avenue and Geary St.

Three-story and basement frame and stucco apts. (15 3-room apts.)
Owner—Name Withheld.
Plans by Lawrence Ebbets, 320 Fulton Street.

Will have steam heating system, tile roof and elevator.

Plans Being Prepared.
APARTMENTS Cost, \$20,000
EMERYVILLE, Alameda Co., Cal.
One-story and basement frame and stucco apts. (six 4-room apts.; Spanish type).

Owner—Mrs. O. H. Reese.
Architect—George Ellinger, 1723 Webster St., Oakland.

Plans will be ready for bids in about two weeks.

Plans To Be Prepared.
APARTMENTS Cost, \$—
REDWOOD CITY, San Mateo Co., Cal.
Main St. bounded by Walnut, Hillton, Maple and Stambaugh Sts. (200 ft. frontage).

Three-story frame and stucco apts. (36 apts. and garage).
Owner—Withheld.
Architect—Not Given.
Agent—Dave L. Walter, 2198 Broadway, Redwood City.

Segregated Bids To Be Taken In One Week.
APARTMENTS Cost, \$10,000
BELMONT, San Mateo Co., Cal.
Two-story and basement frame and stucco apartments.
Owner—Mrs. Talbee.
Plans by Carl Schuetz, 1125 The Highway, Redwood City.

Segregated Bids To Be Taken In One Week.
APARTMENTS Cost, \$40,000
SAN MATEO, San Mateo Co., Calif.
Bayview Heights.
Two-story and basement frame and stucco apartments.
Owner—E. I. Warren, Los Angeles.
Plans by Carl Schuetz, 1125 The Highway, Redwood City.

Preparing Working Drawings.
APARTMENTS Cost, \$200,000
LOS ANGELES, Cal. Ninth and Gramercy Place.
Eight-story Class A reinforced concrete apartments (tile and composition roof).
Owner—Ben Kagan, 311½ S. Spring St., Los Angeles.
Architect—Clarence J. Smale, 5369 Wilshire Blvd., Los Angeles.

Construction Indefinitely Postponed.
APARTMENTS Cost, \$16,000
SAN FRANCISCO, Cabrillo St. E
Thirty-second Ave.

Two-story frame and stucco apartments (four 3-room apts.)

Owner—Mrs. Bluet.
Architect—Richard Irvine, Call Bldg., San Francisco.

Bids To Be Taken In One Week.
APARTMENTS Cost, \$150,000
OAKLAND, Alameda Co., Cal. Crescent Ave. near Santa Clara.

Three-story frame and stucco apartments with Class C concrete garage.

Owner and Builder—R. E. Mayer, 1129 McKinley St., Oakland.
Architect—Douglas Stone, Great Western Power Bldg., Oakland.

Plans Being Figured.
APARTMENTS Cost, \$15,000
BURLINGAME, San Mateo Co., Cal.
Two-story frame and stucco apartments (2 4-room apts.)
Owner—Edward Stack.
Architect—Edwards & Schary, 605 Market St., San Francisco.

Contract Awarded.
APARTMENTS Cost, \$25,000
SACRAMENTO, Sacramento Co., Cal. No. 1416-22 Eighteenth St.
Three-story frame and stucco apartments (24 rooms).
Owner—A. C. Anderson, 1825 O St., Sacramento.
Architect—None.
Contractor—Jos. Pedone, 914 S St., Sacramento.

Plans Being Figured.
APARTMENTS Cost, \$100,000
SAN FRANCISCO, W West Portal Ave. S 15th Ave.
Six-story and basement and sub-basement steel frame and concrete Class C apartments (24 3-rm apts.)
Owner—Withheld.
Engineer—John G. Little, 251 Kearny St., San Francisco.
Steam heating system, composition roofing.
Laughlin Constr. Co., Mills Bldg., is figuring the plans.

To Be Done By Day's Work By Owner
APARTMENTS Cost, \$35,000
SACRAMENTO, Sacramento Co., Cal. No. 2204 H Street.
Three-story frame and stucco apartments (32 rooms).
Owner and Builder—A. E. Hammond, 1604 V St., Sacramento.
Architect—None.

Plans Being Completed.
APARTMENTS Cost, \$50,000
SAN FRANCISCO, SW Beach and Scott Streets.
Three-story and basement frame and stucco apartments (12 3-rm apts.)
Owner and Builder—Thomas Quistad, 2100 North Point St., San Francisco.
Plans by Lawrence Ebbets, 320 Fulton St., San Francisco.
Modernistic style, interior and exterior. Sub-bids will be taken in one week.

To Be Done By Day's Work By Owner
APARTMENTS Cost, \$42,000
ALAMEDA, Alameda Co., Cal. No. 729 Central Avenue.
Three-story frame and stucco apartments (42 rooms).
Owner and Builder—J. M. Kinley, 2120 Delaware St., Berkeley.
Architect—Thos. Keeman, 815 Syndicate Bldg., Oakland.

Planned.
APARTMENTS Cost, \$500,000
LOS ANGELES, Cal. Tenth and Bonnie Brae Sts.
Twelve-story and basement Class A reinforced concrete apartments (118 apts.)
Owner—C. C. Tatum Building Income Trust, Fidelity Bldg., Los Angeles
Architect—Eng. Dept. of Owner.

BONDS

SANTA CRUZ, Santa Cruz Co. Cal. Election will be held October 8 in Laguna School District to vote bonds of \$8,000 to finance school improvements. Trustees of the district are: Thomas E. Majors, John A. Mazzei and Battista Lorenzi.

BISBEE, Ariz.—Cochise county supervisors sold \$300,000 courthouse bond issue to Bosworth, Chanute, Loughridge & Co., Denver, for a premium of \$1001. Will be four-story, fireproof structure with copper roof. Roy Place, architect, 79 N. Stone Ave., Tucson.

PIEDMONT, Alameda Co., Cal.—Board of Education contemplates bond issue to finance erection of new schools and additions and alterations to standing structures.

CHURCHES

Preliminary Plans Being Prepared.
CHURCH Cost, \$40,000
SAN MATEO, San Mateo Co., Cal. San Mateo Drive.
One-story frame and stucco church.
Owner—First Congregational Church.
Architect—Kent & Hass, 525 Market St., San Francisco.

Drive For Funds Under Way
CHURCH Cost, \$25,000
ROSEVILLE, Placer Co., Cal. Jones and Main Sts.
New church (75x140-ft.; to seat 220).
Owner—Methodist Episcopal Church, H. W. O'Kane, pastor, 109 Washington St., Roseville.
Architect—Charles Deane, California State Life Bldg., Sacramento.
Will contain recreational hall, stage, kitchen and pastor's study.

Contract Awarded.
CHURCH Cost, \$650,000
LOS ANGELES, Cal. Sixth and Commonwealth Sts.
Class A reinforced concrete and steel church, chapel and educational building.

Owner—First Congregational Church of Los Angeles.

Architect—Allison & Allison, California Reserve Bldg., Los Angeles
Contractor—Richards-Neustadt Construction Co., W. M. Garland Bldg. Los Angeles.

Completing Plans.
CHURCH Cost, \$75,000
LOS ANGELES, Cal. SE Third St. and Rowan Ave.
Reinforced concrete church with tile roof.

FRESNO, Fresno Co., Cal.—The first step toward building a \$5,500,000 hydroelectric and irrigation reservoir dam across the San Joaquin river above Friant was taken Sept. 24, following the filing of a suit for condemnation of land. The suit was filed on behalf of the Kings River Water Association, citing the right of eminent domain, and names more than 30 defendant owners of land in Fresno county. It is expected a similar suit will be filed in Madera against landowners on that side of the river. The papers filed declare the project is necessary to supply irrigation and domestic waters for a total of 241,300 acres of land, most of which already is partly irrigated. The dam would impound 250,000 acre feet of water.

LOS ANGELES, Cal.—A \$13,300,000 city bond issue will be placed on the ballot No. 4, to provide for construction of (1) aqueduct power plants, (2) power development in Big Pine Creek, Owens Valley, (3) central receiving station and connecting lines, (4) Boulder Canyon power rights-of-way, (5) local distributing station and (6) overhead and underground distribution system.

LOS ANGELES, Cal.—Graybar Elec. Co. was awarded contract by the city purchasing agent Sept. 25, at \$12.55 per C ft., for 160,000 ft. 4-in. I. D. fibre conduit. Spec. 2180.

quired with bid. Plans obtainable from Chris P. Jensen, county surveyor, Holland Bldg., Fresno.

MODESTO, Stanislaus Co., Calif.—Until Oct. 15, 11 A. M. bids will be received by C. C. Eastin, county clerk, to construct reinforced concrete bridge No. 372 over Hood Creek in Section 17, T. 1 N., R. 11 E., together with earth fill approaches and construction of temporary roadways around proposed structure. Certified check 10% required with bid. Plans obtainable from J. H. Hoskins, county surveyor, at Modesto.

WILLOWS, Glenn Co., Cal.—J. W. Halterman, Willows, at \$2,483 awarded contract by W. E. Sale, county clerk, to construct reinforced concrete bridge known as Mehren's Bridge, 3 miles west of Artois.

Following is a complete list of bids:	
J. W. Halterman, Willows	\$2,483
John Berlinger, Orland	2,986
A. F. Remter, Artois	3,247
Thos. Polk, Chico	3,373
McKenzie, Gerber	3,700
F. H. Neilson, Orland	3,965

SANTA CRUZ, Santa Cruz Co., Cal.—Until October 7, 2:30 P. M., bids will be received by H. E. Miller, county clerk, to construct reinforced concrete arch bridge in San Lorenzo Road District over Boulder Creek at north end of Central Ave. in town of Boulder Creek. Will be 91-ft. long with 61-ft. span; 30-ft. wide with 4-ft. walks on either side. Certified check 10% required with bid. Plans obtainable from County Surveyor Lloyd Bowman on deposit of \$5, returnable.

OAKLAND, Cal.—W. W. Hayes, 627 Call Bldg., San Francisco, at \$50,774.04 awarded contract by county supervisors to construct 2 concrete bridges across Crandall Slough between Alvarado and Centerville, involving:

500 cu. yds. excavating for struc. below bridge, \$4.00	
5,500 cu. yds. excavating for struc. above bridge, \$2.00	
1,800 cu. yds. grading, \$.55	
14,000 sq. ft. 8-in. W. B. macadam, \$.12	
1,570 cu. ft. concrete, \$18.42	
267,000 lbs. reinf. steel, \$.0395	
200 lin. ft. 12-in. corr. iron pipe, \$2.10	
remove existing bridge and a clear site, etc. (complete) \$3.685	

SANTA ANA, Orange Co., Cal.—Until October 24, 11 A. M., bids will be received by county supervisors to construct combination wood and steel truss bridge over Santiago Creek in Santiago Bldg. Certified check or bond 5% required with bid. Plans obtainable from Nat Neff, county superintendent of highways, on a deposit of \$5, returnable.

STOCKTON, San Joaquin Co., Cal.—J. C. Fitzsimmons, Lodi, at \$3535 submitted low bid to county supervisors to construct a steel and timber bridge over Little John Creek on the Van Allen Road. Complete list of bids follows:

J. C. Fitzsimmons	\$3535
A. Love	3680
John Hackman	3750
Nelson Bros.	3775
L. Ubel	3830
C. E. Cotten	4343

STOCKTON, San Joaquin Co., Cal.—J. C. Fitzsimmons, Lodi, at \$3,535 awarded contract by county supervisors to construct a steel and timber bridge over Little John Creek on the Van Allen Road.

SANTA BARBARA COUNTY, Cal.—Until October 10, 2 P. M., bids will be received by L. H. Gibson, district engineer, State Highway Commission, Bank of Italy, San Luis Obispo, to construct timber bridge consisting of six 19-ft. spans and two 18-ft. spans on pile bents to bridge gap in existing structure across Santa Maria river, near Santa Maria. Certified check 10% required with bid. Plans obtainable from engineer.

MERCED, Merced Co., Cal.—Until October 15, 11 A. M., bids will be received by P. J. Thornton, county clerk, to construct bridges as follows:

Bridge No. 210—Concrete-over canal on Centenella Road, Road District No. 4 and 5.

Bridge No. 211—Timber-over Black Rascal creek on Bartholomew Road in Road District No. 1.

Bridge No. 212—Concrete-over Warren Ingomar Road in Sec. 3, Twp. 9, S. R. 10 E., Road District No. 4.

Bridge No. 213—Concrete-over Duck Slough on Tuttle Road, in Sec. 7, Twp. 8, S. R. 15 E., Road District No. 2.

Bridge No. 214—Timber-over Rosa Slough on Dos Palos Road, Road District No. 5.

Bridge No. 215—Timber-over Irrigation canal on Lone Willow Road, Road District No. 5.

Bridge No. 216—Timber-over canal in Lone Willow Road, Road District No. 5.

Bridge No. 217—Concrete pipe culverts on North Branch of Mariposa Creek on Tuttle Road, Road District No. 2.

Certified check 10% payable to Chairman of the Board of Supervisors required with bid. Plans obtainable from W. E. Bedesen, county surveyor, Shaffer Bldg., Merced, on deposit of \$10, returnable.

DREDGING, HARBOR WORKS & EXCAVATIONS

RIO VISTA, Solano Co., Cal.—Until October 10, 3 P. M., under Circular Proposal No. 31-ST, Specifications 2467-1708, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, to furnish, deliver and place rip-rap stone along the Sacramento river in the vicinity of Rio Vista. Specifications obtainable from above.

BAKERSFIELD, Kern Co., Calif.—Howard Gilkey, landscape engineer, 337 17th St., Oakland, has submitted plans to county supervisors for development of the Kern River Park, including the construction of a lake which would involve moving of approximately 100,000 cu. yds. earth for construction of levees and embankments. Water supply will probably be secured from a higher level of the river, with a 1700-ft. pipe line to supply the lake with 10 second feet of water. The estimated cost of constructing the lake and basin is \$20,000.

NEWPORT BEACH, Orange Co., Cal.—Application has been made to U. S. Engineer Office at Los Angeles by the City of Newport Beach for a permit to construct groins on the southeasterly sides of 36th, 38th and 40th Sts., Newport Beach, and to extend seaward distances of approximately 80, 110 and 135 ft., respectively.

MARYSVILLE, Yuba Co., Cal.—Hemstreet & Bell, Marysville, at 28c cu. yd. submitted low bid to U. S. Engineer Office, Sacramento, to construct levee 8700 lin. ft. in length on the Feather river.

SAN FRANCISCO—Bureau of Engineering, Department of Public Works, 3rd floor, City Hall, preparing plans for repairs and construction of boat channel at Mills Field Municipal Airport.

OAKLAND, Cal.—American Dredging Co., 255 California St., San Francisco, at 23½c cu. yd. submitted low bid to City Port Commission for dredging in front of Market and Grove St. piers on Inner Harbor. Pacific Coast Dredging Co., 112 Market St., San Francisco, only other bidder at 38½c. Taken under advisement.

REDWOOD CITY, San Mateo Co., Cal.—Surveys are being made by local experts in connection with the proposed development of the Redwood City harbor. Among those who will investigate the feasibility of the project are Francis Betts Smith, engineer, 58 Sutter St., San Francisco; Fred Parr of the Parr Terminals, and Colonel Robbins, acting district engineer for the War Department in San Francisco. The latter's interest in the survey is non-official.

OAKLAND, Cal.—Until October 6, bids will be received by City Port Commission, 424 Oakland Bank Bldg., for dredging at Ninth Avenue Pier, involving 16,000 cu. yds. clam shell work. Specifications obtainable from above office.

STREET LIGHTING SYSTEMS

GUSTINE, Merced Co., Cal.—Frank Silvera, Gustine, at \$5231 awarded contract by city trustees to install 37 electroliers together with underground system in Fifth St. Standards will be hollow spun granite type, 16 ft. 5 inches high.

SAN FRANCISCO—Street & Lighting Committee of the Board of Supervisors will recommend advertising for bids in the immediate future to furnish 600 metal street lighting standards and 300 concrete standards for installation of new boulevards already completed or in the course of construction. Estimated cost \$160,000.

WOODLAND, Yolo Co., Calif.—City council abandons proceedings to install an ornamental street lighting system; estimated cost \$150,000. The project was abandoned due to protests of property owners.

MACHINERY AND EQUIPMENT

STOCKTON, San Joaquin Co., Cal.—Until October 20, 11 A. M., bids will be received by Eugene Graham, county clerk, for repairs to patrol boat. Plans on file in office of clerk.

SAN FRANCISCO—City Purchasing Agent, Leonard S. Leavy, 270 City Hall, directed by Board of Public Works to ask bids to furnish and deliver one concrete mixer.

OAKLAND, Calif.—City council awards contracts as follows for motor trucks for use of City Street Department:

McGurrin Motors, 3300 Broadway, Oakland, two Type A heavy duty at \$2568.75 and \$2768.75; two Type B at \$3111 each; three Type C at \$2950 ea. Mack International Motor Truck Corp., 1092 E 12th St., Oakland; one Type D at \$4688.25.

Pagel Motors Co., Hollywood Blvd. at 107th Ave., Oakland; one Type G at \$1625.

White Motor Truck Co., E 12th St. and 5th Ave., Oakland, one Type I at \$4531.50.

OAKLAND, Cal.—Spears-Wells Road Machinery Co. submitted low bid to city council at \$9,000 to furnish two gasoline rollers for Street Department. Taken under advisement.

OAKLAND, Cal.—Spears Wells Road Machinery Co. at \$4500 each, awarded contract by city council to furnish and deliver two gasoline rollers for use of City Street Department.

PANAMA CANAL—Until October 15, 10:30 A. M., under Schedule No. 2594, bids will be received by Purchasing Officer, Panama Canal, Washington, D. C., to furnish and deliver among other supplies:

- (1) Rock Crushing Plant;
- (2) Power Drag Scraper;
- (3) Trucks;
- (4) School Busses;
- (5) Grinding Machines;
- (6) Wheelbarrows.

Further information obtainable from Assistant Purchasing Agent, Fort Mason, San Francisco.

HEMET, Riverside Co., Cal.—Until October 13, 7:30 P. M., bids will be received by C. M. Dieterich, city clerk, to furnish and deliver:

- (a) one 20-hp. tractor;
- (b) one road grader with 8-ft. blade;
- (c) one road maintainer with 6 rigid blades.

Prices to include delivery f.o.b. Hemet. Further information obtainable from clerk.

FIRE EQUIPMENT

ANTIOCH, Contra Costa Co., Cal.—City Council has authorized the purchase of an inhalator with six oxygen tanks for the Fire Department.

HEMET, Riverside Co., Cal.—Until 7:30 P. M., Oct. 13, bids will be received by the city council for the following fire apparatus:

1. One motor propelled triple combination pumping engine and hose car and
- (2) 2000 ft. of fire hose, which proposals will be opened publicly at the hour of 7:30 o'clock P. M., Oct. 13, 1930.

The proposals are requested for said engine and equipment as follows:

Item 1. One motor propelled triple combination pumping engine of 500 gallons per minute capacity with water booster tank of not less than 80 gallons capacity.

Item 2. 1500 ft. of 2½-in. No. 1 double jacket hose, Pacific coast thread; 500 ft. of 1½-in. No. 1 double jacket hose, Pacific coast thread, or of 1500 ft. of 2½-in. No. 2 double jacket hose, Pacific coast thread, and 500 ft. of 1½-in. No. 2 double jacket hose, Pacific coast thread. All hose to be in 50-ft. lengths with couplings.

Bidders must quote price for delivery f.o.b. city of Hemet, which price shall include complete installation of all equipment on the engine.

Each bidder must attach to his proposal and make a part thereof specifications which must contain detailed

descriptions and which must be in accordance with the general specifications on file in the office of the city clerk. C. M. Dieterich, city clerk.

RESERVOIRS AND DAMS

WHITTIER, Los Angeles Co., Cal.—All bids for constructing a 10,000,000-gal. concrete lined reservoir (received Sept. 22) were rejected by the city council. The work will probably be done by the city under the direction of the chief engineer, M. R. Bowen.

PHOENIX, Ariz.—The Verde River & Irrigation & Power District has been granted permit by the Department of the Interior to construct an impounding dam 265 ft. high to impound 950,000 acre feet at Camp Verde. Authorization for power plant, canals, laterals, etc., was made several months ago. John G. Bailhache is general manager and chief engineer.

ALBUQUERQUE, N. M.—Construction work on the El Vado dam, to be built across the Rio Chama by the Middle Rio Grande Conservancy District, will start early in 1931, according to an announcement by the officials of the district. The dam will be located near the townsite of El Vado and is to be 172 ft. high, 1375 ft. long, with a thickness of 77 ft. at the bottom and 20 ft. at top. The reservoir will have a capacity of 200,000 acre feet and two heavily reinforced concrete pipes will be constructed in the river bed, which will serve for outlets for the irrigation water. The estimated amount of cement to be used is 170,000 sacks, together with 1,000,000 pounds of metal work and 2,000,000 pounds of reinforcing steel. Gravel and rock for the body of the dam will total 350,000 cu. yds. and excavation will involve 100,000 cu. yds. The cost will be \$1,500,000. This will be the only storage reservoir of the Middle Rio Grande system. Other dams will be constructed but they will be merely diversion dams. The state has already issued the conservancy district a permit to build the dam and in cooperation with the district the state highway department is building a 13-mile road from Tierra Amarilla to the damsite. J. L. Burkholder, Albuquerque, is chief engineer of the Middle Rio Grande Conservancy District.

PIPE LINES, WELLS, ETC.

OAKLAND, Cal.—Informal bids are being received by City Port Commission, 424 Oakland Bank Bldg., to furnish cast iron casing for dredge pump; estimated cost, \$850. Further information obtainable from above.

TIDEWATER, San Luis Obispo Co., Cal.—General Petroleum Corp. is planning to construct an oil pipe line from the Kettleman Hills to Tidewater at Morro Bay at an estimated cost of \$15,000,000. The company has purchased 576 acres at Morro Bay for a tank farm.

FAIR OAKS, Sacramento Co., Cal.—Until October 11, bids will be received by Fair Oaks Irrigation District to furnish and deliver riveted or welded steel split-joint pipe, as follows:

- 2,000-ft. 30-in. 8-gauge.
- 2,000-ft. 30-in. 10-gauge.
- 2,000-ft. 12-in. 12-gauge.

Specifications and further information obtainable from secretary of district at Fair Oaks.

PACIFIC COAST—Thebo, Starr & Anderson, engineers and contractors,

Sharon Bldg., San Francisco, have contract to construct pipe lines, cast iron and welded steel, together with other appurtenant structures in connection with natural gas supply system to serve various communities from the Canadian border to Mexico, for the Natural Gas Corporation of Washington, Oregon and California. For labor in connection with the project, sub-contractors have been awarded to Hutchinson Co., 1450 Harrison St., Oakland, and Lindgren & Swinerton, Inc., 225 Bush St., San Francisco. The amount of work to be undertaken during the present year will involve an expenditure of \$3,500,000. The construction program will extend over a period of from three to five years.

SEWERS AND SEWAGE DISPOSAL PLANTS

SAN FRANCISCO—T. E. Connolly, 461 Market St., at \$251,617 awarded contract by Board of Public Works to construct Section K of the College Hill Sewer, (reinforced concrete) extending from the Mission Viaduct to Valencia and Army Sts. Complete list of the unit and total bids previously published.

MT. VERNON, Wash.—Until Oct. 10 bids will be received by E. Crookston, city clerk, to construct sewer system, involving approx. 4 miles of pipe, as follows:

4500 ft. 6-in. pipe.
3500 ft. 8-in. pipe.
1500 ft. 10-in. pipe.
2200 ft. 12-in. pipe.
4300 ft. 15-in. pipe.
3100 ft. 18-in. pipe.
500 ft. 18-in. pipe in tunnel or deep trench.
1800 ft. 21-in. pipe.
375 ft. 24-in. pipe.
460 ft. 30-in. pipe.

Alternate bids will be asked on concrete and tile pipe.

In addition to the above the project will include cast iron pipe as follows: 660 ft. 20-in.
70 ft. 30-in.
180 ft. 18-in.

Other units consist of 27 catchbasins, 17 manholes, reinforced concrete pump houses with four pumps and dry well and sewage pumps.

Plans on file in office of clerk and obtainable from C. E. Dorisy, consulting engineer, Republic Bldg., Seattle.

WATSONVILLE, Santa Cruz Co., Cal.—Until October 7, 7:30 P. M., bids will be received by M. M. Swisher, city clerk, to construct approximately 1,045-ft. 6-in. sewer in Monte Vista Ave. Certified check 10% payable to mayor required with bid. Plans obtainable from H. B. Kitchen, city engineer.

SANTA MONICA, Los Angeles Co., Cal.—Plans have been completed for 18-in. main sewer in Colorado Ave., bet. 20th and 2nd Sts., involving 18-in. double strength vitrified pipe, a total of approximately 7200 lin. ft. Howard B. Carter, city engineer.

ALHAMBRA, Los Angeles Co., Cal.—Until 9 A. M., Oct. 7, bids will be received by the city commission for constructing an ornamental lighting system with posts, conduits, wires, etc., in San Marino Ave. from Sixth St. to Garfield Ave.; Shorb St., from Sixth St. to Garfield Ave.; Second St., from San Marino Ave. to Valley Blvd.; Third St., from San Marino Ave. to Valley Blvd.; Fourth St., from San Marino Ave. to Valley Blvd.; Fifth St., from San Marino Ave. to Valley Blvd.; and Sixth St., from San Marino Ave. to Valley Blvd. Act of 1911. R. B. Wallace, city clerk. Otto N. Rugen, city engineer.

LOS ANGELES, Cal.—A \$6,000,000 city sewer bond issue will be placed on the ballot No. 4. The proceeds will be used for construction within a period of five years as follows: (1) Improvements to city drainage districts, \$3,300,000; (2) central outfall construction, \$100,000; (3) collection system, Harbor District, \$309,140; (4) sewage treatment, \$1,152,600; (5) sewer system in San Fernando valley, \$1,000,000; (6) sewage treatment in San Fernando valley, \$100,000; (7) Hyperion plant, \$275,000.

REDWOOD CITY, San Mateo Co., Cal.—Bids will be asked by the county supervisors within the next 30 days to construct outfall sewer system to serve portions of South San Francisco, San Bruno, Lomita Park and Capuchino, into San Francisco Bay; estimated cost, \$120,500. Project involves:

Vitrified Salt Glazed Sewer Pipe
2,700 lin. ft. 4-in.
100 lin. ft. 6-in.
5,300 lin. ft. 8-in.
6,900 lin. ft. 10-in.
9,300 lin. ft. 12-in.
1,400 lin. ft. 15-in.
8,400 lin. ft. 18-in.
3,150 lin. ft. 21-in.
Cast Iron Pipe Sewer
96 lin. ft. 8-in.
3,420 lin. ft. 10-in.
144 lin. ft. 12-in.
3,150 lin. ft. 14-in.
120 lin. ft. 18-in.

Vitrified Salt Glazed Wyes
60 8x4-in.
120 10x4-in.
140 12x4-in.
60 15x4-in.
130 manholes.
23 M. ft. b.m. redwood pile trestle.
2 pump pumps.
2 pump houses.
4 air and vacuum valves.
4 pressure air valves.
4 400 GPM pumps, complete.
2 400 GPM pumps, complete.
Project will be known as Acq. and Imp. District No. 21. R. A. Klassen, engineer, Redwood City.

BRAWLEY, Imperial Co., Cal.—City council will call election shortly to vote bonds to finance construction of extensions to sewer system. Amount of issue not yet determined.

BERKELEY, Alameda Co., Calif.—W. J. Tobin, 527 Balfour Ave., Oakland, at \$2,506 awarded contract by city council to construct sewer in The Alameda, San Pedro Ave. and Laurel Lane.

WATER WORKS

SAN BRUNO, San Mateo Co., Cal.—John Pestana, 1222 35th Ave., Oakland, at \$313.01 awarded contract by city trustees to construct extension to Municipal Water System in the Fifth Addition.

SAN FRANCISCO—Finance Committee of the Board of Supervisors recommends appropriation of \$26,700 to finance re-location of water mains in South San Francisco area, due to construction of Bayshore Highway.

LONG BEACH, Cal.—U. S. Pipe & Foundry Co., Los Angeles, at \$73,800 submitted low bid to city council to furnish cast iron pipe, as follows: (a) 18,000 ft. 4-in., \$7200; (b) 54,000 ft. 8-in., \$41,550; (c) 18,000 ft. 12-in., \$24,750. Other bids were: American C. I. Pipe Co. (a) \$7290; (b) \$42,390; (c) \$25,020. Pacific States C. I. Pipe Co. (a) \$7335; (b) \$42,660; (c) \$25,200. National C. I. Pipe Co. (a) \$7560; (b) \$42,120; (c) \$25,020.

Taken under advisement.

PALO ALTO, Santa Clara Co., Cal.—See "Government Work and Supplies," this issue. Bids wanted for one 1250-gal. per hour water softener for U. S. Veterans' Hospital.

CARMEL, Monterey Co., Cal.—C. G. Gillespie, state sanitary engineer, recommends to city trustees installation of a settling basin and a complete filtration plant for the municipal water system. Estimated cost \$40,000.

LONG BEACH, Cal.—Pittsburgh Equitable Water Co., submitted low bid to the city manager at \$8.45 each for water metres. Other bids were: Neptune Metre Co., Lambert, \$8.675, Trident, \$9.675; Madger Metre Co., \$8.90; Worthington Co., \$9.

SAN DIEGO, Calif.—City Hydraulic Engineer H. N. Savage has announced that plans are under consideration for tapping the Imperial Irrigation District canals to provide an additional 20,000,000 gallons daily water supply.

BRAWLEY, Imperial Co., Calif.—Second election will be called by city council to vote bonds of \$100,000 to finance construction of extensions to water system and installation of filtration plant. Previous election was defeated.

TORRANCE, Los Angeles Co., Cal.—The \$400,000 bond issue of Municipal Improvement District No. 1 for water supply and distribution system, carried at the election Sept. 25. The estimated cost of the construction, etc., is \$381,000. The proposed improvement work is the acquisition and construction of a water producing and distributing system, including wells, pumps, tanks, reservoirs, distribution mains, and land, rights of way, and easements therefor, and all other necessary equipment and appurtenances for a complete water producing, purifying and distributing system, for the sale of water for domestic, agricultural, industrial and other uses. F. R. Leonard is the engineer.

OCEANSIDE, San Diego Co., Cal.—Until October 22, bids will be received by city council to construct extension to water system in south section of city; estimated cost \$22,000. Plans obtainable from R. L. Loucks, city engineer.

DENVER, Colo.—Until October 6, 3 P. M., bids will be received by U. S. Reclamation Service, to furnish and deliver c. i. bell and spigot pipe with fittings, including lead and jute for joints, to make up the pipe line from station 0+00 to station 15+60, complete as follows:

(a) 1566 ft. 8-in. inside diameter cast iron bell and spigot pipe. Total laying length including fittings and specials. Bidder state whether centrifugally cast or sand cast.
(b) 8-in. inside diameter cast iron bell and spigot pipe bends as follows: 2 22½ degree; 4 11¼ degree.
(c) 1 8-in. flanged wedge gate valve, rising stem, bronze mounted, faced and drilled, for 125 lbs. water pressure, with 2-ring gaskets and 2 sets flange bolts.
(d) 1 8-in. flanged fish-trap. Trident or equal, with 1-ring gasket and 1 set flange bolts.
(e) 2 8-inch diameter by 20-in. length cast iron pipe, one end with standard A. S. M. E. flange, faced and drilled, one end with spigot.
(f) 2 8-in. inside diameter cast iron adapters, one hell end to fit 8-in. i. bell and spigot pipe, one end to fit 8-in. inside diameter wood stave pipe. Lump sum price for all materials under Item a.

BEVERLY HILLS, Los Angeles Co., Cal.—Until October 21, 8 P. M., bids will be received by city council to furnish and install 2,610 ft. 6-in. and 8-in. cast iron pipe. Specifications obtainable from Salisbury, Brawshaw & Taylor, Petroleum Securities Bldg., Los Angeles.

HAWTHORNE, Nev.—Brooks Company of California, Inc., Los Angeles, at \$53,482 awarded contract by Bureau of Yards and Docks, Navy Department, for irrigation system in connection with Naval Ammunition Depot at Hawthorne, Nevada.

HAYWARD, Alameda Co., Calif.—Castro Valley County Water District proposes to vote bonds of \$150,000 to finance installation of water mains and equipment to connect up with the East Bay Municipal Utility District system.

OAKLAND, Cal.—A complete tabulation of the total and unit bids received by the East Bay Municipal Utility District to furnish approximately 2,022 tons of cast iron pipe, ranging from 4-in. to 6-in. diameter, bell and spigot, will be found on page five of this issue.

OAKLAND, Calif.—American Brass and Copper Supply Co., 523 4th St., Oakland, at \$1355 per foot or \$6,775 submitted low bid to East Bay Municipal Utility District to furnish and deliver 50,000-ft. of 3-inch seamless copper tubing. Complete list of bids follows:

American Brass & Foundry Co., Oakland	\$1,355
*Crane Co., Oakland	.146
Ducommun Corp., S. F.	.1489
Water Works Supply Co., S. F.	.1489
Chase Brass & Copper Co., Inc., Oakland	.1489
Tay-Holbrook, Inc., Oakland	.1490
**Mueller Co., San Francisco	.154

*1% cash discount on or before 10th of month following date of purchase.
 **30 days Net. 1% cash, 10 days.

Bids taken under advertisement until October 3.

PLAYGROUNDS & PARKS

SARATOGA, Santa Clara Co., Cal.—Saratoga Tennis Club plans immediate construction of three new tennis courts. The late Senator Jas. D. Phelan left the club \$2500 for this purpose to which additional monies have been added by private subscription.

BAKERSFIELD, Kern Co., Calif.—Howard Gilkey, landscape engineer, 337 17th St., Oakland, has submitted plans to county supervisors for development of the Kern River Park, including the construction of a lake which would involve moving of approximately 100,000 cu. yds. earth for construction of levees and embankments. Water supply will probably be secured from a higher level of the river, with a 1700-ft. pipe line to supply the lake with 10 second feet of water. The estimated cost of constructing the lake and basin is \$30,000.

STREETS AND HIGHWAYS

OAKLAND, Cal.—Until October 9, 2 noon, new bids will be received by Frank C. Merritt, city clerk, to improve portions of Marguerite Drive and Hill View Lane, involving grading; gutters; pave.; cement walks; conc. gutters; storm water drain. 1911 Act. Previous bids rejected due to failure of lowest bidder to sign bid. Certified check 10% payable to city required with bid. Plans on file in office of clerk. Walter N. Frickstad, city engineer.

SAN FRANCISCO—Bureau of Engineering, Department of Public Wks, 3rd floor, City Hall, making surveys for new highway connecting Divisadero and Castro Sts., the construction to extend over a period of three or four years; estimated cost \$150,000. This highway is planned in anticipation of heavy traffic originating from the Golden Gate bridge.

SACRAMENTO, Cal.—J. R. Reeves, 2331 30th St., Sacramento, at \$6,963.00 awarded contract by county supervisors to construct road from Sacramento city limits to American River bridge.

BUTTE COUNTY, Cal.—C. Mankel, Sacramento, at \$4470 awarded contract by State Highway Commission to furnish and apply oil on 5 miles, between Chico and county boundary.

COLUSA COUNTY, Cal.—H. Sykes, Patterson, at \$4665 awarded contract by State Highway Commission to furnish and apply fuel oil on 5 miles between Arbuckle and Geneva.

MENLO PARK, San Mateo Co., Cal.—City trustees declare intention (30-2) to improve Hoover St., for its entire length and Oak Grove Ave., from point 45 ft. s. w. of Hoover St. to pt. 45 ft. s. e., and Valparaiso Ave. from pt. 45 ft. s. w. of Hoover St. to pt. 45 ft. n. e., involving grading; cem. conc. curbs and walks; part circle galv. iron culverts; 4-in. waterbound rock macadam base pavement with 1½-inch Colas surface; vit. salt glazed pipe sewer laterals. 1911 Act, Bond Act 1915. Hearing October 7. Fannie I. Kurtz, city clerk.

PACIFIC GROVE, Monterey Co., Cal.—Clark & Henery Construction Co., Chancery Bldg., San Francisco, awarded contract by city council (3233) to improve Junipero Ave. bet. Forest Ave. and east city limits, involving grading; conc. curbs and gutters; asph. conc. pave.; storm drains; conc. catchbasins.

YOLO COUNTY, Cal.—Harms Bros. Galt, at \$4,216 awarded contract by State Highway Commission to furnish and apply oil on 5.6 miles between Cache Creek and Camara.

OAKLAND, Cal.—Central California Roads Co., 28th and Poplar Sts., Oakland, at \$41,602 awarded contract by city council to widen and repave E. 12th St. from 1st to 13th Aves., involving 6-in. concrete base, 2-in. asphaltic concrete surface, 23c sq. ft.

OAKLAND, Cal.—City council declares intention (1771) to improve portions of Hampton Road, Liggett Drive, Estates Drive, Sims Drive and Pershing Drive, involving grading; curbs and pave.; storm water drainage system; conduit. Estimated cost, \$38,090.20. Imp. Act 1913. Hearing October 30. Frank C. Merritt, city clerk. Walter N. Frickstad, city engineer.

BAKERSFIELD, Kern Co., Cal.—Until October 14, 11 A. M., bids will be received by F. E. Smith, county clerk, to place 4000 square feet of concrete landing and 821.2 square feet of concrete walks at the airport. Certified check 10% payable to Chairman of the Board of Supervisors required with bid. Plans on file in office of clerk.

SACRAMENTO, Cal.—E. F. Hilliard 1355 43rd St., Sacramento, at \$14,209.50 awarded contract by county supervisors to construct shoulders on Sacramento river road.

WILLOW GLEN, Santa Clara Co., Cal.—City council has started proceedings to widen Willow Street and open Kottenberg and Blewett Avenues; estimated cost \$70,000. Will involve curbs, walks, asphalt pavement. Work under Matton Act.

OAKLAND, Cal.—City Engineer W. N. Frickstad preparing plans to improve streets in County Club Manor, involving sewers, curbs, gutters, paving. Streets included are: Sarazen, Espinosa, Turnesa, Plintridge, Midwick and Castlewood and portions of Oak Knoll Blvd., Golf Links Rd. and Jones and Encina Aves.

OAKLAND, Cal.—City council rejects bids to improve (a) Plymouth St., bet. 99th Ave. and Cherry St., and (b) portions of Hermosa Ave. and Broadway Terrace. Bids considered too high. The projects will be re-advertised. Walter N. Frickstad, city engineer.

ANTIOCH, Contra Costa Co., Cal.—Proceedings will be started shortly by the city council for paving approximately 10 blocks in the old city limit area and for an equal amount of work in the Wills Addition, property owners having petitioned for the work. E. L. O'Hara is city engineer.

SAN FRANCISCO—California Construction Co., Standard Oil Bldg., at \$37,890 awarded contract by Board of Public Works to construct Section D of the Sunset Boulevard between Noriega and Irving Sts. with connections to Lincoln Way. Complete list of unit and total bids previously published.

AMADOR COUNTY, Calif.—Yglesias Bros., 500 Spreckels Theatre Bldg., San Diego, at \$149,461.50 awarded contract by State Highway Commission to grade and surface with untreated crushed gravel or stone, 4.3 miles between Amador City and Martell. Complete list of the unit and total bids received on this project published in Sept. 23 issue.

OAKLAND, Cal.—Heafey-Moore Co., 344 Hight St., Oakland, awarded contract by city council to improve portions of Ballard Ave., involving excavation, \$.85 cu. yds.; concrete curb, \$.75 lin. ft.; concrete gutter, \$.25 sq. ft.; 2-in. asph. conc. surface, 3-inch asph. conc. base pavement, \$.20 sq. ft.

SANTA CRUZ, Santa Cruz Co., Cal.—Granite Const. Co., Watsonville, at \$3,344.38 awarded contract by county supervisors for oil macadam paving in portions of East Cliff Drive and 17th Avenue.

LOS ANGELES COUNTY, Cal.—Until Oct. 22, 2 P. M., bids will be received by State Highway Commission for clearing 5.3 miles between 4 miles north of La Canada and Colby Canyon. C. H. Purcell, state highway engineer.

See call for bids under official proposal section in this issue.

IMPERIAL COUNTY, Calif.—Until October 22, 2 P. M., bids will be received by State Highway Commission to grade and pave with asphalt concrete 13.1 miles between Arroyo Salado and the northerly boundary. C. H. Purcell, state highway engineer.

See call for bids under official proposal section in this issue.

SAN FRANCISCO—Bureau of Engineering, Department of Public Wks, 3rd floor, City Hall, completes plans and bids will be asked shortly for grading Section A of the Alameda Boulevard project, from Mission St. to Bay Shore Blvd.

SAN FRANCISCO.—Bureau of Engineering, Department of Public Wks., City Hall, estimates cost of widening Van Ness Ave. between Market and California St. by reducing sidewalks at \$60,000. Proposed to widen the street 12 feet.

SANTA CRUZ, Santa Cruz Co., Cal.—Granite Const. Co., Watsonville, at \$31,975 awarded contract for all macadam paving on Sequel-San Jose rd.

STOCKTON, San Joaquin Co., Cal.—Clark & Henery Construction Co., Chancery Bldg., San Francisco, at \$38,871 submitted low bid to county supervisors to pave Lower Sacramento Road from Acampo to Forest Lake on that portion of the San Joaquin County Highway system in Road District No. 2. Complete list of bids follows:

Clark & Henery.....	\$38,871
C. W. Wood, Stockton.....	43,531
Valley Paving & Constr. Co., Visalia.....	50,178
Project involves:	
325,000 sq. ft. subgrade;	
32,800 lin. ft. headerboard;	
6,600 tons asph. concrete;	
125 tons finishing coat.	

STOCKTON, San Joaquin Co., Cal.—Geo. French Jr., P. O. Box 675, Stockton, at \$16,402 submitted low bid to county supervisors to improve subdivision road in the vicinity of Stockton, on that portion of the San Joaquin Highway System in Road District No. 1, involving approximately 10 miles of graveling and oiling. Complete list of bids follows:

George French, Jr.....	\$16,402
Perierra & Reed.....	16,553
Louis Moreing.....	18,683
C. W. Wood.....	18,270

SAKERSFIELD, Kern Co., Cal.—City Council declares intention (968) to improve alley north and south through block 166, between 22nd and 43rd Sts., alley through blocks 153, 26, 113, 487, 514, 527, 114, 486, each one block long, involving 5-inch concrete pavement, certain 8-inch sewers, manholes, some walk and curb; under 911 Act and 1915 Bond Act. Hearing Oct. 13. V. Van Ripper, city clerk.

SAN FRANCISCO.—Specifications are being prepared by the Bureau of Engineering, Department of Public Works, 3rd Floor, City Hall, for improvements to relieve traffic conditions in Presidio Ave., between Post and Geary Sts. and in Geary St., between Presidio and Masonic Aves.

COLUSA COUNTY, Calif.—As previously reported, D. McDonald, 1118 G St., Sacramento, at \$95,140 submitted low bid to State Highway Commission to surface with gravel base, 8.1 miles between Williams and Maxwell, involving 71,000 cu. yds. Following is D. McDonald, 1118 G St., Sacto.—\$134 complete list of unit bids received:

B. R. Dennis Const. Co., San Di-	ego.....	1.44
Basich Bros., Torrance.....		1.57
C. W. Wood, Stockton.....		1.60
F. Anderson, Oakland.....		1.69
L. Compton, McMinnville, Ore.....		1.70
Mangel, Sacramento.....		1.71

ARC-WELDING ADVANTAGES IN ERECTION OF TALL BUILDINGS

Continued from page 2

1. Welded connections can, wherever necessary or desirable, be made stronger than the strongest possible riveted connections for the same purposes.

2. Welding develops highly concentrated resistance, requiring one-third or less of the space needed for rivets to transfer equal load. Therefore welded connections are more compact and require less material than riveted ones. Knee braces or gussets projecting below the beams are sometimes used in welded buildings where there is no architectural objection, but they are never needed to develop the full available strength of the members.

3. Welded joints never work loose; all deflection or drift is due solely to elastic deformation of the framework as a whole. Welded joints can be made flexible, but for wind bracing the opposite is needed.

4. It is easy to prove that field welding costs less than its strength equivalent in field riveting. Add to this saving the reduction in amount of steel required for a connection and the elimination of the shop work of punching or drilling rivet holes. The result is that it saves money to substitute a well-designed welded connection for a riveted one.

The question of reliability does not favor either riveting or welding as against the other. No one could have years of experience in both riveted and welded construction, without holding a conviction that both methods are systematically controlled within limits which insure safety.

Buildings are not the only tall structures. Until recently the Eiffel Tower, nearly 1000 feet high, held the world's record. Possibly some organization will presently decide to erect a far taller tower, for scientific purposes or for service in connection with aviation or for advertising and public amusement. It goes without saying that a tower lacking solid walls and solid floors can be built far higher than any possible building structure, but I am not aware than any engineer has worked out figures as to the limiting heights as governed by strength and weight of available materials. With the idea of carrying the discussion of tall structures into dimensions which have not been explored by actual construction, I have made a rough study of an open steel tower one mile in height. While there may be no likelihood that such a structure will be built, brief consideration of its possibilities is repaid by the resulting knowledge that it is practicable and by certain items of information as to a feasible design and the amount of steel required for same.

Arc-Welding Preferred

The object of introducing this hypothetical tower into the present discussion is to point out the reasons why arc-welding would be preferable to riveting for such a structure. A skeleton diagram of such a tower is shown, with items of information about the form and dimensions of a few of the main members. No comparative studies have been made to determine whether different proportions would result in greater economy, but the base width, taken at one-tenth the height, is evidently about

as small as could be used under the assumed wind pressure without serious uplift at base of windward columns. For designing the steel, wind pressure has been assumed at 20 lbs. per square foot of exposed vertical surface, but as this figure has been applied to all vertical windward faces even where partially protected by neighboring members, the allowance represents more than 20 lbs. pressure on fully exposed surfaces. Taking into account the low ratio of average to maximum pressure where the affected area is very extensive, and the fact that occasional winds of much higher average intensity than the assumed value could safely be resisted by the structure as designed, 1 thing the 20 lb. figure is fair. The foundation has been tested for stability and soil pressure under 50% extra wind pressure. Before designing such a high tower for actual construction, I should want to investigate the wind pressure more carefully, with special reference to wind velocities at high altitudes. All members are designed for compression, but require connections and splices designed to resist both compression and tension. All main members, including the diagonal wind braces, are proportioned with length ratio equal to 60. The main posts, forming the four edges of the pyramid, are composed each of a cluster of four columns arranged in a square, braced by trusses in the four outer planes and by transverse bents; the main compression elements are designed for combined effect of the weight above and maximum wind compression, at 20,000 lbs., per square inch. The main diagonals, made up of column clusters like the main posts, are designed for wind compression at 15,000 lbs., per square inch, this rather low value being intended to take account of fatigue effect of stress reversal.

To avoid the immense labor of designing this mile high structure panel by panel, I have employed mathematical integration to determine wind stresses, accumulated weight and cross sectional areas as functions of the distance from the apex. Some errors are, of course, involved, mainly in respect to weight of connections, but below the relatively light top fourth of the tower, the formulas are probably correct within 10%. I find a requirement of 19,000 tons of steel for a tower with welded connections. This does not include any allowance for landing stages, observation galleries, elevator hatch framing and other miscellaneous framing which would be needed to make the tower useful; the weight of these extras and the additional material in the main towers to carry the added load might easily bring the total of 25,000 tons. The reinforced concrete foundation, designed for maximum soil pressure 2½ tons per square foot, under conditions of 30 lb. wind pressure, requires 13,000 cubic yards of concrete.

Under the assumed maximum wind pressure, a slight uplift exists at base of windward columns. Since the wind tension in windward columns varies as the square of distance below the apex, while the compression due to weight of steel increases somewhat more rapidly than the cube of the distance, the net tensile unit stress decreases with the distance

OFFICIAL PROPOSALS

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be re-
ceived at the office of the State High-
way Engineer, Public Works Build-
ing, Sacramento, California, until 2
o'clock P. M. on October 22, 1930, at
which time they will be publicly
opened and read, for construction in
accordance with the specifications
therefor, to which special reference is
made, of portions of State Highway,
as follows:

Los Angeles County, between four
miles north of La Canada and Colby
Canyon (VII-L-A-61-A), about five
and three-tenths (5.3) miles in length
to be cleared.

Imperial County, between Arroyo
Salado and the northerly boundary
(VIII-26-D & E), about thirteen and
one-tenth (13.1) miles in length, to
be graded and paved with asphalt
concrete.

Proposal forms will be issued only
to those Contractors who have fur-
nished a verified statement of ex-
perience and financial condition in
accordance with the provisions of
Chapter 644, Statutes of 1929, and
whose statements so furnished are
satisfactory to the Department of
Public Works. Bids will not be ac-
cepted from a Contractor to whom a
proposal form has not been issued
by the Department of Public Works.

Plans may be seen, and forms of
proposal, bonds, contract and speci-
fications may be obtained at the said
office, and they may be seen at the
offices of the District Engineers at
Los Angeles and San Francisco, and
at the office of the District Engineer
of the district in which the work is
situated. The District Engineers' of-
fices are located at Eureka, Redding,
Sacramento, San Francisco, San
Luis Obispo, Fresno, Los Angeles,
San Bernardino and Bishop.

A representative from the district
office will be available to accompany
prospective bidders for an inspection
of the work herein contemplated, and
Contractors are urged to investigate
the location, character and quantity
of work to be done, with a representa-
tive of the Division of Highways.

It is requested that arrangements for
joint field inspection be made as far
in advance as possible. Detailed in-
formation concerning the proposed
work may be obtained from the dis-
trict office.

No bid will be received unless it is
made on a blank form furnished by
the State Highway Engineer. The
special attention to prospective bid-
ders is called to the "Proposal Re-
quirements and Conditions" annexed
to the blank form of proposal, for full
directions as to bidding, etc.

The Department of Public Works
reserves the right to reject any and
all bids or to accept the bid deemed
for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS DIVISION OF HIGHWAYS.

C. H. PURCELL,

State Highway Engineer.

Dated September 24, 1930.

ADVERTISEMENT FOR BIDS

Subject to conditions prescribed by
the undersigned, sealed bids are in-
vited for installation of (1) Plumbing
Equipment, Heating and Ventilating;
(2) Electric Equipment; (3) Refrig-
eration and Air Conditioning Apparatus
in the buildings of the Engineer-
ing Group, University of California,
Berkeley, California. No bids received
after 11:00 A. M. Monday, October 6,
1930. The right to reject any and all
bids is reserved. For full information
apply to Cashier's Window, California
Hall, University of California, Berke-
ley. A deposit of \$100 is required for
each set of Drawings and Specifica-
tions.

THE REGENTS OF THE UNIVER- SITY OF CALIFORNIA

The Helund Western Lumber Com-
pany, financed by Spokane men, has
strated erection of a mill on the Du-
wamish waterway that will involve an
expenditure of \$200,000. The plant will
be ready for operation Jan. 1. Dock-
ing facilities for both coastwise and
overseas ships will be provided.

SALESMAN WANTED

WANTED — Experienced salesman
for Southern California territory to
represent nationally known Eastern
manufacturer of fireproof building
products. Party must have several
years previous experience calling on
architects and positively well familiar
with building construction. This is a
splendid opportunity for qualified party
to develop substantial earnings.
Reply in confidence stating previous
positions and nature of work in each,
together with your present age. No
consideration given unless complete
past details are mentioned. Address
BOX 15, % Daily Pacific Builder.

ATTORNEY'S FEES IN LIENS

The Lien Law does not provide for
Attorney's fees in case of foreclosure
on liens. If you desire to do for this
point you should have a printed
clause on your contracts whereby the
purchaser agrees, in case of any suit,
to pay all court costs and a reason-
able attorney's fee. (Orange County
Exchange Bulletin).

TO ESTABLISH MILL

H. W. La Farniere, formerly en-
gaged in the sawmill business near
Dorris, Calif., has purchased a tract
of timber of some six million feet and
will construct a mill to cut upwards of
25,000 feet a day at Lakeview, Ore.

Of the private lands secured there
is between five and six million feet of
pine and a considerable quantity of
forest timber also adjoins the tracts.
A large portable mill now owned by
the purchaser will be moved to the
site at once and it is expected to have
the mill in operation within the next
two weeks.

The new mill will be located about
a mile and one-half south of the Ber-
land & White mill in the same terri-
tory.

A "Pittsburg" Auto-
matic Water Heater
installed in the Home
indicates high quality
throughout.

Recommended and speci-
fied by all the leading ar-
chitects, plumbers and
builders.

FRESNO COUNTY HIGHWAY BUREAU TO REORGANIZE

Virtual abolishment of the Fresno County highway maintenance department and the placement of County Surveyor Chris P. Jensen as consulting engineer in road work carried on by the various supervisorial districts has been agreed upon by the Fresno County Supervisors.

It was stated that the highway maintenance department is to be abolished because it has outlived its usefulness and that Jensen, who made the suggestion for the change in system, can be used to better advantage in counseling with the supervisors on the road problems of the various districts.

Under the proposed setup, which the board will soon formally place into effect, Jensen will practically oversee road district highway work. He will make up the budgets for road work and will supervise the control and expenditure of money for highway maintenance. All requisitions and payrolls, after January 1, will be subjected to his scrutiny and approval.

Full details of the new plan remain to be worked out, it was stated by the board. Present employees of the highway maintenance department will either be rehired or absorbed in the road district crews, it was stated.

PUTS UNEMPLOYED UP TO EMPLOYERS AND UNIONS

"No town should permit a worker whose taxes and buying power support it, to become a charity case or to move out if it is at all possible to find the right job for him. No industry should lose a skilled worker who has spent his life learning his trade, because the skill, efficiency, and loyalty of its workers are an industry's greatest assets. Any trade union which permits a cardholder to go idle is failing in its first obligation."

"When unions and trade associations realize that employment agencies are the only logical machinery for minimizing such unemployment as seems inevitable, then will the unemployment problem be on the way to solution."

Sam A. Lewisohn, vice president Miami Copper Co., in the current Engineering and Mining Journal, summarizes his views of how this worldwide unemployment problem can be solved.

Mr. Lewisohn sees no excuse for seasonal and casual unemployment; is convinced that unemployment caused by changing demand, new product development, etc., can be anticipated and prevented by managements with vision; suggests that strong attacks at the types of unemployment for which there are remedies might do much to eliminate the cyclical type now baffling the world.

Ralph Wyckoff, San Jose architect, has been elected president of the San Jose Commercial Club.

TREATED LUMBER IS URGED FOR THE HOME

An annual loss of approximately \$45,000,000 caused to houses and buildings in the United States through insect attack and decay of their wooden members exposed to moisture or in contact with the ground can be considerably reduced by the use of treated or chemically preserved lumber, according to Irving B. Hiett, realtor and building authority of Toledo, Ohio, and a member of the National Committee on Wood Utilization of the Department of Commerce.

Mr. Hiett, who is a past president of the National Association of Real Estate Boards, said that the wood utilization committee, in co-operation with the Ohio Retail Lumber Dealers Association, is seeking to eliminate this yearly waste, a part of which occurs in Ohio, by familiarizing the building public with the advantages of treated lumber for house and small building construction. Heretofore, its use has been confined largely to railroad and industrial projects, but now this material is being made available in Ohio through retail lumber yards in small quantities and in sizes suitable to home building.

"Treated Lumber, Its Uses and Economics," a bulletin just published by the National Committee on Wood material in house, small construction and farm buildings, and is being given a wide distribution in the state as a part of the general waste elimination movement, according to Mr. Hiett.

Damage by insects to lumber and timber in service is done chiefly by termites or "white ants," the bulletin says. These insects are most prevalent in the Southern States but the damage which they cause in the Corn Belt and the Central Western States is almost as great as in the South. The preservative treatment of lumber used for the sills, joists and foundations of a house or in other places where the wood is exposed to moisture or near the ground makes it resistant to the inroads of insects and decay. In order to make supplies available to the home owners and small users of lumber, the National Committee on Wood Utilization is sponsoring the retail distribution of this material.

The treated wood bulletin can be obtained at a nominal charge from the Superintendent of Documents, Government Printing Office, Washington, D. C., or through Co-operative Offices of the Bureau of Foreign and Domestic Commerce, Department of Commerce, at Toledo, Akron, Cleveland, Columbus, Dayton and Cincinnati.

Isaac Pearson, 81, retired lumber man of Sacramento, died in that city October 4. A brother and three nephews survive.

CONCRETE AGGREGATES ARE MEASURED BY WEIGHT

In an increasing number of states, highway department specifications require that concrete aggregates, especially on bridge and culvert construction, be measured by weight. A convenient device for quickly and accurately measuring pre-determined amounts of concrete, aggregates by weight has recently been developed by The Knickerbocker Company. It is known as the "Tilt-Weigh" Batcher. Operating entirely independent of the mixer, it can be used to charge any type of mixer equipped with a power loading skip. It is positioned in close proximity to the end of the mixer skip and may be charged by the most convenient and practical method conditions permit. If stock piles are adjacent, materials may be shoveled in. If stock piles are not close enough for this method, materials may be wheeled and dumped into the batcher hopper from a low platform easily constructed of wood. Certain unusual layouts would permit spouting of materials, but ordinarily the wheeling method is most practical especially on bridge construction.

Sand should be placed in the hopper first, so that when a batch of sand and stone is dumped into the loading skip, the stone will be on the bottom. After aggregates are in the skip, cement is added in the usual way.

Scale is constructed with two weigh arms—the sand arm having a capacity of 1100 lbs., the stone weigh-arm a capacity of 2100 lbs.

After the poises on the beams have been set for the predetermined weights of the door of the beam case should be locked so that poises can not be changed. No attempt should be made to weigh with the dial. This is merely a tell-tale to show the approach to balance. When dial shows zero, the beam is in balance. Accuracy of the scale arms can be easily and quickly checked with test weights. A small supply of aggregates should be placed adjacent to the batcher, so that the man doing the weighing can, when necessary, add to or deduct from the material placed in the hopper by the barrow man. In most cases contractors using this batcher find that it does not add a man to the crew. Sometimes the mixer operator trims the load. On some jobs the man handling the cement does it—in other cases the last barrow man.

When aggregates have been weighed, the hopper tilts over, pivoted on two rollers. By means of the wheel, which actuates two sets of toggles, the hopper is quickly and easily tilted to deposit the batch cleanly in the skip.

"Tilt-Weigh" Batcher is built in two sizes—2-bag and 3-bag 1-2½-4 mix. The hopper of the 2-bag size will hold 13 cu. ft.—the 3-bag, 19½ cu. ft.

Isaac Pearson, 81, retired lumber man of Sacramento, died in that city October 4. A brother and three nephews survive.

METHODS TO ELIMINATE UNDESIRABLE CONTRACTORS VIA STANDARDS OF QUALITY

(By Clyde A. Mann in General Building Contractor)

One of the most serious difficulties confronting both the general contractor and the subcontractor is the complete lack of what might be called "standards of quality" applying to the character of complete structures. Without such standards to differentiate good work from poor, the responsible builder cannot be protected from unfair competition. Until we set up some practicable method of classifying work on a basis of its quality, the legitimate builder will be a prey to those whose chief interest in a specification is the possibility of beating it. Good builders submit bids expecting to erect good buildings, but there are apparently many of the profession of speculators who hardly have that expectation.

Believing that no one is more familiar with the methods employed on speculative buildings than the superintendents who have charge of operations, I obtained the comments of nearly a hundred whose work in the aggregate represents each year many millions of dollars. It is impossible to quote names, but the various groups represented the best class of superintendents—men who have a pride in their calling. The consensus of opinion was that the good contractor, that is, the conscientious builder, "got it in the neck." The superintendent's position was also represented as being none too easy. Several of my informants took the situation as a direct challenge to their own reputation.

Owners Responsible

"But what can we do," said one, "when owners deliberately connive with the general contractor and subcontractors to cheapen the structure from the foundations up? In such cases we have to turn our backs on stuff that makes us sick because if we are fussy we get fired. The minute the contract is signed the trouble starts, usually something like this: 'How much, Mr. Contractor, did you allow in your bid for three-coat plastering according to specifications? That much! Well, you can cut out one coat and deduct the difference from your bid.' Right down the list goes the 'gyp' builder and agrees to substitution, elimination, and fraud, to cut on the quality of everything and get a lower cost. Little does he care what his changes from specifications are going to cost the future owner after he sells the structure."

Another superintendent pointed out the fact that although the owners are often responsible for cheapening work, the "Jerry" contractor usually succeeds in doing it. There was general agreement on the fact that specifications were not very hard to evade, particularly if the supervisor was incompetent or supervising from the "shanty."

Architects and their superintendents, where they did not have the full cooperation of owners and were not being retained for supervision, gave very much the same story.

Finance Company Inspection

"Not many speculative builders want real architectural service," one architect explained. "Stock plans, slightly modified, usually serve the purpose. The objective is cheapness without regard to future upkeep costs. Skn here and save there. The results are a warning to the American public but the trouble is the public does not know there is a better way."

The chief inspector of a financing company which has supplied tens of

Because of the recession in theoretically in a position to obtain precisely the grade of work building construction, owners are wary of the bond issues that built them. As futures are of no interest to the speculative builder, the lack of accepted standards becomes a matter of great importance not only to owners, investors in bonds, but tenants as well.

How can a building of highest operating costs expect to survive except on the highest possible rents? Better built and better planned buildings might drop their rent schedules and still make money. The bid for tenants would be on the basis of comfort and satisfaction as well as on rental rates. Such buildings would have the prospect of success that inferior structures would not have.

The quality of the construction decides the depreciation. A check-up of comparatively new buildings, erected within the last seven to ten years in a typical locality, indicates a large number already showing signs of obsolescence. It is noteworthy that among these there is a large proportion that have proved unsuccessful from the investor's viewpoint. Other buildings in the same locality are growing old gracefully and will apparently continue to serve their purpose with only a normal upkeep for perhaps fifty years. That may be said to indicate a depreciation rate variation from six to even seven per cent, down to one and one-half to two per cent. Project that depreciation forward for a ten year span; in one case the margin of safety of a 50 per cent loan has been wiped out; in the other the margin has been reduced by only 20 per cent. The day is at hand when the building with a low depreciation rate and a low upkeep and repair expense will have premium loans more in keeping with the facts. The lenders of money for buildings have played safe if they were conservatives and loaned less than buildings deserved, or they have made loans without regard to facts because the public was going to furnish the money through bond issues. In either case, the contractors and every one down the line suffered from the system.

millions for speculative builders put the matter quite clearly:

"How can a contractor do good work when the owner is clamoring, 'Cut the cost,' and agreeing to any old construction tricks that will complete the building cheaply and quickly so it may be sold? The old-line contractor is at a disadvantage. This inspection service for the finance company is comparatively new and we have to 'talk turkey' to the contractors and subs who do most of the speculative work. When we first began to say, 'Tear that out and do it right or you don't get any money,' they made a terrible squawk. But they soon learned to change their previous customs. Trouble is they figured to build a third-grade building and collect for a second-grade building, while the quality builders were bidding on first-grade construction and nothing else. The public utility companies and federal work has to be first-class, but they haven't been in other types, any enforceable standard."

When a man pays for an all-work suit and gets one made of shoddy he kicks, and very properly. But in the field of building construction any standards for complete structures have been conspicuous by their absence, with demoralizing results for all contractors, as well as architects and dealers in first-class materials and equipment.

In bidding for a contract without a quality standard, the reputable contractor, subcontractor, and all their building trades are toyed with by direct competition with the producers of shoddy buildings, possessing an amazing ability for deception and substitution. The pride of good craftsmanship was given one painful wallop after another until the awards by the New York Building Congress began to revive the zeal for craft traditions. The net result of the existing vagueness about grade of structures, as affecting the investment, is the variation in operating costs, in the rate of inevitable depreciation, and in the permanency of occupancy, which is reflected in the varying results of building loans, particularly those floated with the money of the public. The outstanding total of all issues of mortgage gold bonds for buildings east and west, north and south, is given by the New York Real Estate Securities Exchange as between eleven and eighteen billion dollars.

Building managers who study costs in relation to arrangement and size and plan of completed new building are beginning to find amazing variations in such items as percentage of occupancy and cost of fuel; important items, too, to the operating company. These factors are built into the struc-

tures as the result of plans and specifications and decide the success or failure of many well-located buildings and of the bond issues that built them. As futures are of no interest to the speculative builder, the lack of accepted standards becomes a matter of great importance not only to owners, investors in bonds, but tenants as well.

How can a building of highest operating costs expect to survive except on the highest possible rents? Better built and better planned buildings might drop their rent schedules and still make money. The bid for tenants would be on the basis of comfort and satisfaction as well as on rental rates. Such buildings would have the prospect of success that inferior structures would not have.

The quality of the construction decides the depreciation. A check-up of comparatively new buildings, erected within the last seven to ten years in a typical locality, indicates a large number already showing signs of obsolescence. It is noteworthy that among these there is a large proportion that have proved unsuccessful from the investor's viewpoint. Other buildings in the same locality are growing old gracefully and will apparently continue to serve their purpose with only a normal upkeep for perhaps fifty years. That may be said to indicate a depreciation rate variation from six to even seven per cent, down to one and one-half to two per cent. Project that depreciation forward for a ten year span; in one case the margin of safety of a 50 per cent loan has been wiped out; in the other the margin has been reduced by only 20 per cent. The day is at hand when the building with a low depreciation rate and a low upkeep and repair expense will have premium loans more in keeping with the facts. The lenders of money for buildings have played safe if they were conservatives and loaned less than buildings deserved, or they have made loans without regard to facts because the public was going to furnish the money through bond issues. In either case, the contractors and every one down the line suffered from the system.

The "Stabler" Plan

What is true of large buildings is true also of dwellings and vice versa. The plan proposed some years ago by Walter Stabler, then controller of one insurance company lending \$75,000,000 a year for building purposes, applied primarily to dwellings; but, in a somewhat different form, it may be and no doubt will be applied to larger structures. When advocating his plan for the construction of dwellings, Mr. Stabler said:

"In New York just before the great war began, at several meetings of representatives of lending institutions and private building-loan operators, it was proposed that a bureau should be established by the lenders. To this bureau were to be sent all plans, and specifications for buildings, upon which loans were desired from any of the lenders. The architects and engineers employed by the bureau were to examine all plans and specifications, and if approved to so notify the lender. If the loan was to be made, the building was to be examined during construction by architects of the bureau and certificates issued to the builder for payment by the lender. When the building was finished a certificate of completion was to be issued by the bureau to the lender; also a certificate of quality of the building

was to be issued by the bureau to the builder. The production of such a certificate by the builder would at once satisfy a buyer that since the house had been carefully built under such rules and attention by disinterested experts, the buyer ran no risk of getting into such troubles as I have heretofore referred to.

"The beginning of the war prevented the carrying out of this plan in New York, but I hope it may be revived as it is much needed there.

Establishing Bureaus

"The plan I suggested was the establishment in every city or town, where possible, of a bureau to supervise the construction of all dwellings and other buildings where loans were wanted from local lenders, or from local individuals, firms or institutions, representing lenders from other places. The bureaus may at first be financed by the lending interests, but ultimately they should be self-supporting from charges made by the bureaus to the borrowing builders. I suggested that a specially prepared certificate be given to builders of approved houses, a house of first-class construction and finish to be described in the certificate as 'Class A' house, and a house not quite so good as a 'Class B' house. In a very short time, and with the publicity that this plan will surely receive through the press, and from the efforts of the builders, materialmen, and realtors, the public who buy homes will begin to ask builders for these certificates and failing to get them will not buy. I predict that in any city where this plan is put into effect will not be long before all houses built with borrowed money will be constructed under bureau supervision, with the certain result of driving out of business the dishonest or ignorant builders, and insuring to buyers honestly built and durable houses.

"And the lending interests, including those wonderful helps to home owners, the building and loan associations, should insist that houses built with the help of their funds must be built to deserve the certificate of merit, or funds will not be forthcoming."

Although the comparison may at first seem far-fetched, Mr. Stabler's proposal is very similar to the solution applied years ago to the problem of shipping. It was first corrected by the inspection and rating system under Lloyds Register of Shipping, and more recently under the rules of the American Bureau of Shipping. In 1925 there were 32,956 vessels afloat throughout the world, and of that number 15,514 were under Lloyds inspection and rating. The lives of shipbuilders have been immeasurably brightened by the standards of merit of ship structures complete. It is easy to see that the same system applied to buildings would remove from the contracting business a great many pitfalls and handicaps which exist today. I talked to Lloyds Register officials and here is the opinion expressed by the Chief Surveyor:

"I am in receipt of your letter of the 13th inst. and also the copies of articles which appeared in the New York Times and Herald Tribune in regard to setting up an organization to assign ratings to buildings.

"I have perused these articles with considerable interest and I can quite readily see the analogy which exists between the building of office structures and suchlike, and the building of ships.

"To give you a general outline of the plan of this Society, I may say that plans of ships proposed to be classed are first submitted for criticism and approval, the materials entering into the construction are tested in the presence of our Surveyors at the point of manufacture; the construction of the ships is supervised through its various stages by our Surveyors who

then report upon the quality of workmanship and materials.

"This report is then considered by a Committee, who assign the class.

"Subsequently, the vessel is submitted to inspection at stated intervals to ascertain that she is being well maintained in order to retain her class.

"It should be quite obvious that the principles applied to the classification of ships could very readily be applied in the rating of building structures.

"With regard to your inquiry regarding the influencing of men appointed to the duties of supervising the proper performance of the work, it may be said that those engaged in the building and operating of shipping do not lend themselves generally to the practices referred to by you, and partly due to this and to a careful selection of Surveyors by our Committee, who at all times treat the Staff with the utmost consideration and generosity, we have never, to the writer's knowledge, experienced any difficulties of this kind.

(SGD) J. O. CRENCIL,
Chief Surveyor."

Rather interesting, this, considering the fact that the New York Building Congress has had a similarly favorable recommendation from its Technical Committee, the Committee on Standards which produced the excellent "Standard Specifications for New York City." As a result of that comment by Chairman William Arthur Payne, the Executive Committee took steps to get the big lenders, underwriters and owners to join in enlarging a small organization, which had succeeded in the rating of dwellings in Detroit and Chicago, to one adequate to cope with the problem of building in New York City.

Possibilities in Building

A Lloyds register of building, known as Certified Building Registry in the United States has a multitude of possibilities. It would be no more mandatory than Lloyds Register or a registry for Hereford cattle; the moving force is the competitive advantage to owners, and the safeguards to lenders and fire underwriters. With more exact information in hand about good buildings the loans on them should and could be made liberal—in itself an incentive to builders to begin competing on quality. That would be the first step toward putting the conscientious, good builders on a fair basis of competition with the less responsible.

The Certified Building Registry took a leaf out of Lloyds Register plans when it began creating Rating Code Committees of experts for each type of building. The "Technical Committee" of Lloyds Register is the only one authorized to change the rules. And those rules from the basis of contract between shipbuilders and shipowners, between shipowners and merchants (operating companies) and charterers, and between all four and the underwriters. The only difference is that the Code for Rating each type of building will be revised each year by the committee responsible for that type of building code.

In this way financial benefit will attach to proof of good rating, creating an incentive to builders, speculative or otherwise, to compete as to quality. This furnishes a fulcrum for leverage in favor of good construction, one far more potent than city ordinance requirements, which are at best minimum requirements and enforced by an inspection service that is necessarily limited.

What yardstick can be used today

to show the improvements of a building as the result of modernizing it? What basis have lenders for making loans to owners for modernizing expense? Rating of course would furnish that yardstick. I have seen it applied in an interesting way. A very old stone house was transformed at moderate expense, electrified, heated by hot water, insulated at upper ceilings and re-arranged with new plumbing upstairs and down. The old home was durable, but the new one was durable and many other things. From a Class D house rating 45 it became a Class AA house rating 85 plus. This was an investment that paid.

Certified Registry

The credentials of Certified Building Registry showed that in the dwelling field "rating" was a demonstrated success. The Detroit Board of Commerce asked the chairman of its Real Estate Division who was Louis G. Palmer, now president of the Michigan Real Estate Association, to investigate and report. He did it by having some houses surveyed and detailed "ratings" prepared. This was done on the basis of a "Code for Rating Dwellings Costing \$25,000 or Less," which had been revised in accordance with recommendations of the United States Bureau of Standards, the Technical Secretary of the American Institute of Architects, and others. Mr. Palmer put his conclusions in the following words:

"The work of the Certified Building Registry is becoming well known to many of our local civic bodies, financial houses, and especially realtors doing a building business. Much interest displayed in future benefits to be derived from rating. It will circumscribe activities of the unscrupulous and inefficient and promote business of those organizations conscientiously seeking to produce a better building product for less money. Every builder has accomplished an enviable record in this regard except the building trades industry. It can and will be accomplished only when all good builders, financial houses, and realtors unite in a good constructive program and insist upon adoption of rigid minimum standards for various classes of building construction. The Registry service should be very helpful."

Prospects in Housing

One great prospect for new construction in large cities is the replacement of slums. Former Governor Alfred E. Smith of New York is President of the Housing Association which a few years from now expects to spend many millions in such replacements.

"The financing of housing construction of this sort has suffered particularly from lack of standards of excellence. Contractors looking forward to the replacement of the slums in big cities will do well to read the following comment of Lawson Purdy, one of New York's foremost housing experts. As head of the Charities Organization Society, he has had a long experience with housing plans and their financial problems. I am privileged to quote the following from a recent letter:

"I am very much interested in the plans you have described to me for the organization of a corporation to rate buildings for dwelling purposes having in view the various qualities which a building should have to make it safe, sanitary, and a good permanent investment. The country generally has suffered from poor planning of dwellings, single-family, two-family, and multi-family, and the poor

building such houses. A system of giving a rate to a dwelling of any class which would fairly weigh the different qualities the building should have and then give it an appropriate rating would be of enormous assistance to buyers, lenders, and the public generally.

"I have a special interest in multi-family houses because they predominate in the City of New York. It has been the practice to a degree of lenders to base the amount of the loan on a multi-family dwelling almost exclusively on its cubical content. This has discriminated against houses that covered a smaller percentage of the lot, which are better planned, cost less per square foot of rentable area than the poorly planned house of greater cubical content. It has been a direct discrimination against such planning as will produce a house that will be a good, substantial, permanent investment, easy to rent and to keep full, as compared with a poorly planned house of a greater cubical content which will not rent so well and will not be so good an investment nor so good for the persons who dwell in it.

"We have been afflicted with thousands of single-family houses spaced so closely together as to be a serious fire hazard and so poorly built that maintenance charges are grossly excessive.

"Such a plan as you propose can be so developed that it will afford an insurance to buyers and lenders of the character of the construction actually employed and the value of the planning. It is needless to say that if a house rated 'I' is the best of its class and another rated 'IV' is the poorest of its class, number 'I' should sell for more money and should carry a heavier loan.

"It is essential to the proper conduct of the corporation you propose that it shall have on the board experienced men who represent architects, engineers, building experts, and, I should hope, also city planners and housing experts. A board so composed could see that a good job was done and would carry with it the confidence of the public."

When such men as Mr. Purdy so ardently advocate a remedy that will aid the reputable contractor, and when the same plan is also advocated by outstanding members of the American Institute of Architects, the opportunity is open for contractors to put their shoulders to the task of bringing about such an organization.

The whole problem has been summarized by the Civic Development Department for the Chamber of Commerce of the United States. This Department deals with construction and has been sympathetic but not aggressive. The report states that rating buildings will:

- "Benefit reputable architects.
- "Relieve reputable contractors of the distressing competition with irresponsible contractors, and the 'chiseling' of owners who sacrifice quality.
- "Help restore confidence of public and thereby help to revive home-buying and building and real estate activity.
- "Improve the real estate investment situation.
- "Enlist the co-operation of competent construction superintendents who want to do their work properly.
- "Encourage good craftsmanship and thereby restore the zeal of building trades for good work.
- "Encourage home ownership by practical protection to buyers.

"Enlarge the market enormously for first-class materials and equipment which are sold on quality, not price.

"Stabilize speculative building on a wholly different standard.

"Improve the rental situation for quality buildings."

LAW GOVERNING OIL BURNING INSTALLATIONS PROTESTED AT PORTLAND

Portland's restrictions on installation of oil burners are too drastic and cause a hardship on the small householder, requiring him to make an outlay of from \$500 to \$600, when such installations could be made for from \$200 to \$300, declares E. Cook, manager of the Leco Oil burner, Seattle, with offices in Portland and Vancouver, B. C., in an appeal to the mayor and council for modification of the installation requirements.

Cook says he makes this appeal in behalf of his own concern "and other companies in the same business." He asks that the council repeal the requirement that each oil burner within the city limits shall have the label of the underwriters and wants home owners to be permitted to install gravity feed burners supplied from a 45-gallon to 200-gallon tank above ground or in suitable basement space, installed under city inspection, with larger installations to have underground tanks as at present.

Cook asks for a hearing before the council.

\$20,000,000 WATER AND POWER PROJECT PROPOSED

Application has been filed with the State Department of Public Works, Division of Water Resources, Sacramento, by the Metropolitan Water District of Southern California, seeking authorization to appropriate waters and construct a dam in San Bernardino County, to impound 717,000 acre feet of water from the Colorado river.

The diversion system is to cost \$20,000,000. The concrete dam is to be 270-feet high and 590-feet long. The power plant is to have a capacity of 168,000-horsepower.

The impounding area is to include lands in San Bernardino County, California, and Yuma and Mojave Counties, Arizona.

WEBBER CONSTRUCTION FILES NOTICE OF APPEAL

The Webber Construction Company has filed notice in the superior court at Stockton, of intention to appeal from the judgment of the court and denial of motion for a new trial in the former's suit against J. E. Johnston and the Pacific Indemnity Company.

The plaintiff sued for \$17,606.85 and costs, charging that Johnston failed to comply with a contract to take crushed rock from the Webber Construction Company on the Redwood highway job between Wilson Creek bridge and the Klamath river bridge.

A jury recently brought in a verdict in favor of Johnston.

STEEL EXPORTS GAIN

Steel exports from the United States for August amounted to 151,225 tons, an increase of 19,463 tons, or 14.8 per cent, over the July total.

The Commerce Department, in reporting the gain, notes that imports of steel for the month had not shown a similar increase.

SUPERBO WATER HEATER SAID TO BE EXEMPT FROM 'LIMING'

A new method of heating water with the greatest amount of efficiency, and claimed to be exempt from "liming," has been developed by the Superbo Water Heater Company.

"Liming" is one of the most provoking difficulties in connection with water heaters and is the result of precipitation of lime in the water at a certain temperature which, in the course of time, builds up a coating that impairs the efficiency of the heater.

The new system of heating devised by the Superbo Water Heater Company is a departure from the coils and spreaders long in vogue and involves the use of a special "baffle-core flue" which, the manufacturers say, insures perfect combustion. There is a smooth surface on the inside and outside of the flue walls and therefore nothing to interfere with the free gases or the circulation of the water. This new idea has simplified the construction of the Superbo heaters to such an extent, the company declares, that it is now prepared to offer the trade for the most efficient, durable and safe water heater for the lowest price. A safety device shuts off all gas flow if the pilot light is accidentally extinguished.

Superbo heaters have been made and sold on the Pacific Coast for more than sixteen years. Heretofore the management's slogan has been quality, and quality only. Now, due to the new system, it will be both quality and price, they say.

The San Francisco office of the company is located at 557 Market St. with Mr. C. H. Miller in charge.

STRICKLIN NAMED OREGON STATE ENGINEER

Appointment of C. E. Stricklin as state engineer of Oregon, succeeding Rhea Luper, resigned, is announced by Governor Norblad. The State Reclamation Commission has approved the governor's choice, a measure required by law.

Stricklin has been employed in the state engineer's office since 1912 with the exception of some time spent on the Mexican border in 1916 with the third Oregon regiment. He was appointed assistant engineer to Percy A. Cupper and was retained in that position by Luper when the latter became engineer in 1923.

Stricklin, born in Oregon, was graduated from the school engineering of the Oregon state college in the class of 1911. He spent a year in the university of Idaho. He was also graduated from the Willamette University Law School.

No changes in the personnel of his department are contemplated by the new engineer.

\$6,662,761 IS BUILDING TOTAL FOR LOS ANGELES

During the month of September, 1930, the Los Angeles city building department issued 2992 permits with an estimated valuation of \$6,662,761, as compared with 2736 permits with an estimated valuation of \$6,629,710 for the same month a year ago. For August, 1930, the number of permits was 2608 and the estimated valuation was \$6,494,577. Los Angeles' building total for 9 months of the current year was \$58,711,865, as compared with \$47,155,214 for the corresponding period last year.

THE OBSERVER

What He Hears and Sees on His Rounds

The city council of Pacific Grove, Monterey county, has adopted a resolution providing that a clause be inserted in all contracts for future public work requiring the employment of local labor wherever possible.

Woodland city council plans adoption of an ordinance requiring that all buildings erected within the city limits conform to a certain standard and making it mandatory for all contractors to pass examinations such as have been required of electricians and other tradesmen.

C. C. Jarman, city building inspector of Fresno, reports that the termite, or wood boring insect, is active in Fresno and has taken a foothold in the oak flooring of several homes. Jarman advised the spraying of floors with creosote where the insect is discovered.

The Napa city council is considering the adoption of the Uniform Building Code as prepared by the Pacific Coast Building Officials' Conference.

The Sacramento Builders' Exchange aims to co-operate one hundred per cent with the State Department enforcing the license law. It has instructed its secretary to file complaints and authorized him to swear out warrants for the arrest of all unlicensed contractors in the Sacramento district.

Under an amendment to the building ordinance just introduced, the Richmond city council will demand building permits for structures erected on the inner harbor. No fees will be charged for the permits. Only masonry structures will be permitted in the area. Heretofore the city has not regulated, nor has it required a building permit for industrial buildings on the unsubdivided acreage. The amendment prohibits the erection of wood and corrugated iron structures in the district.

The board of Building and Safety Commissioners of Los Angeles has adopted an ordinance requiring every architect, civil engineer, structural engineer, contractor or sub-contractor to have a state license before any permit or license can be issued by the Building Department. It asked the city council, if this meets with approval, to instruct the city attorney to prepare necessary ordinance for enactment. Referred to the building and safety committee of the city council.

An encouraging sign in the construction field is the continuation of advertising planned by the American Face Brick Association for the fall months. More than 13,000,000 advertisements, ranging from a single column full page in four colors, will appear in the general and trade press during the fall.

Publicity in magazines and newspapers also forms a part of the campaign. Articles for magazines and news releases for the newspapers are being offered regularly with the result that many metropolitan papers feature stories about face brick on their building pages.

Since the association began its magazine advertising in 1919, more than \$1,300,000 has been expended in this activity alone.

A plan to place on the November ballot a proposal to raise \$250,000 each year for public school construction by direct taxation is being considered by the Berkeley Board of Education.

The plan is sponsored by Mrs. Robt. Hector, a member of the board who opposed the \$2,000,000 bond issue, defeated at the August election.

The proposed direct taxation plan is legal, according to Sam Cohn, legal adviser for the State Board of Education.

In four years the plan will raise sufficient money for twelve elementary units and the completion of the Berkeley High School project, according to tentative estimates.

The Industrial Committee of the San Francisco Junior Chamber of Commerce is considering whether or not it will present to the next session of the Legislature proposals to give California manufacturers preference within a certain margin over outside concerns in awards for State projects.

The question arose over the winning by a \$12 margin of a contract for steel pier doors for pier 1, on the San Francisco harbor, by an Eastern concern, represented here by Rolph, Mills & Co., over the Kennerston Mfg. Co., San Francisco. The award, made September 17, went to Rolph, Mills & Co. for \$10,445.

The contractors' state license law is being enforced. Since the establishment of the State Department of Professional and Vocational Standards, a total of 426 complaints have been filed. Many of these were settled before any action was taken by the department. Some were settled by the department to the satisfaction of all concerned. In sixty-three cases licenses were suspended and in nine cases the license were revoked.

Recently a Sacramento contractor was fined \$50 and a 30-day jail sentence was suspended. Another Sacramento contractor was fined \$60 for a violation of the safety laws. A Fresno contractor submitted a bid before he secured his license. He was low bidder and refused to go ahead with the job. He was arrested and convicted for operating without a license.

Steady resumption of building activities during the winter months, recovery active by January 1 and a swing toward normalcy during the summer of 1931 are predicted by E. M. Craig, executive secretary of the National Association of Building Trade Employers (Chicago) who made public a survey of conditions in 175 United States and Canadian cities.

He said the low point of depression had passed, and a slow, steady return to activity might be expected.

"One factor intended to aid the nation's building industry to emerge from its depression will be official ratification of the new board of trade claims by the convention of the building trades department of the American Federation of Labor, October 3," he said.

"This is a tribunal established for adjustment of jurisdictional disputes between building trades. Its inauguration was urged by President Hoover, who declared its adoption would maintain public confidence in building."

Pasadena's Board of City Directors recently rejected by a four to two vote the home-labor ordinance, which provided heavy penalties for contractors on municipal jobs who did not hire 75 per cent of their labor crews in that city, as a result of the placing before the board of new facts by City Manager Orlishan. The most serious objection to the law, Orlishan said, was that the measure meant that the county would refuse further aid on local highway projects. In view of the supervisors' refusal to grant aid where any laborer in the county was discriminated against.

Business depression increase in labor efficiency now is evident, notably in building, but it cannot be measured, says The Business Week.

The employer can dictate now. If he is hard-boiled, he gets results.

The main factor working to bring about sizeable reduction in building costs is not reduced prices of raw materials, which are quite moderate, or decreases in wage scales, which are by no means large or general, but willingness of contractors to forego putting normal profits into estimates. If possible, they reimburse themselves by putting pressure on sub-contractors and workmen. If they don't get it back, they have at least kept their organizations running.

A billion dollars will probably be America's loss through bankruptcy this year, directors of the National Association of Credit Men are told by William Fraser, president.

"The annual loss has been approximately \$150,000,000 for the last several years," he said. "Judging from the increased rate of business failures it will likely reach a billion for 1930."

"To this must be added the losses arising from many failures which never get into the bankruptcy courts. Even the richest nation in the world cannot go on making off such a tremendous bad debt loss year after year. Annually it amounts to more than the total value of the Nation's wheat crop and is only slightly under the net operating income of the railroads."

Fraser said the bankruptcy investigation recently ordered by President Hoover "promises to be one of the most constructive undertakings in

At a recent meeting of the Board of Directors and the Advisory Council of the Los Angeles Builders' Exchange, James F. Collins, state registrar of contractors, outlined his policies in the enforcement of the law and modification of some of its provisions which he deemed necessary for better protection of the interests of building owners and incidentally to the advantage of the building industry. He said he believed that adjustment of complaints which would save something for the person who built only once in a lifetime is more important than drastic prosecutions. He favored removal of the \$200 limit on jobs which exempted contractors from the necessity of having a license so that practically all contractors might be brought within its scope. He said 4000 or 5000 small contractors were now evading responsibility under the law through this exemption. Mr. Collins said also he believed the jurisdiction of the Registrar should be extended in order that the spirit and intent of the law might be carried out more fully without going to court.

ALONG THE LINE

The State Board of Architectural Examiners, Northern District, at a meeting on September 30, granted Provisional Certificates to practice architecture in California to:

William Henry Rowe, 1535 Vancouver Ave., Burlingame.

Francis E. Lloyd, 3311 Washington St., San Francisco.

Milton Latham, Carmel, Calif.

James S. Polhemus, former assistant United States engineer at Portland, Ore., died in that city, September 29.

During his career in the engineer's office Mr. Polhemus was identified with nearly every major project in rivers and harbors of Portland and vicinity. He was especially active in jetty work and established jetties at Yaquina and Coos Bays.

Born in Astoria, N. Y., March 26, 1852, Mr. Polhemus came to Portland in 1880. He retired from active service March 25, 1924. He is survived by one son, James H. Polhemus, general manager of the port of Portland, and a daughter, Harriet.

George H. Burnett, operating the Burnett and Sons Planing Mill at Sacramento, died in that city October 1, following a brief illness. Burnett, born in 1868, was the son of the late Henry Burnett, founder of the planing company. His widow, a daughter and sister survive.

The Circuit Court at Detroit, Mich., has been asked to stop the processes of law in order to save the homes of unemployed persons who can not meet their mortgage and land contract payments.

The move was initiated by attorneys for a local radio station. On a petition issued an order, returnable October 9th, requiring the circuit court commissioners to show cause why they should not be enjoined from acting in land contract forfeiture and ejectment cases until further order of the court.

The petition states 30,000 home owners in Wayne County have invested their savings in home but are unable to continue their payments because of unemployment "through no fault of their own."

This situation, the petition states, constitutes a crisis, which "threatens the health, property and very life of thousands of good and worthy citizens and threatens to damage the morale of the people and for many years practically ruin the business of selling real estate."

The court was asked to request the governor to call a special session of the legislature to amend the foreclosure laws.

INCORPORATES

B. Q. Manufacturing Company of Stockton, capitalized for \$500,000, has filed articles of incorporation with Secretary of State Frank C. Jordan. The company will manufacture and market all types of automatic control equipment, according to Ira E. Smith, inventor and organizer of the corporation, whose product is said to be used in many industrial plants throughout the state and on ocean-going vessels. Other incorporators are L. M. Smith and Newton Rutherford.

STATE RULING GIVEN ON BUILDING CONTRACTORS

Attorney General C. A. Sorensen, of Nebraska, has advised the State Board of Control that, while it cannot directly or indirectly exclude employers of non-union labor from the competition for State building construction contracts, the Board, by reason of the "lowest responsible bidder" clause of the statute, "can enforce standards of quality in workmanship for the performance of which only employers of union labor may in many cases be found 'responsible.'"

The Supreme Court of Nebraska, according to the opinion of Mr. Sorensen, determined in the case of Wright v. Hoctor (35 Neb. 342) that under the applicable statutory provisions there can be no express union labor clause or other provision which has the effect of arbitrarily excluding from the bidding employers of non-union labor in specifications, notice to bidders, proposals, or contracts for the construction of buildings by the Board. But under the "lowest responsible bidder" clause of the statute, the Attorney General declared, the Board has a discretionary power in determining the responsibility of a bidder, the exercise of which power will not be set aside unless it is arbitrary or capricious.

In determining responsibility, it is pointed out, the facilities of the bidder for the task, including his ability to supply competent laborers, may be determined. The Board, the opinion states, "may consider labor union standards of workmanship in deciding the responsibility of bidders."

"If, in thus preparing to let contracts for building construction, the Board finds that union wages, hours, apprenticeship and conditions of labor generally make the best quality of workmanship, no reason suggests itself why your Board cannot incorporate that quality of workmanship into the specifications and notify bidders to make their proposals or bids accordingly."

NO STATE LICENSE; DRAWS \$100 FINE

Charged with violation of the state contractors' act, Bert Perkins, proprietor of the Artcraft sign shop of Watsonville, was fined \$100 when he appeared in Justice Phil Hayward's court. Seventy-five dollars of the fine was suspended, pending good behavior. Perkins is the fourth defendant to be convicted since the act was passed in 1929. Perkins' offense was having failed to obtain a contractors' license.

ARCHITECTS' LICENSE LAW VIOLATOR RECEIVES A SUSPENDED SENTENCE

Enri Edouard Cavasso of San Mateo was found guilty of violating the state law governing the practice of architecture in the court of Judge Jackson at Burlingame, last Friday.

Cavasso presented a claim for \$350 to the Jersey Farm Creamery for services in connection with plans for a structure to be located down the Peninsula. The claim, after investigation by the State Board of Architectural Examiners, was denied and proceedings started by the architectural body against Cavasso who was practicing architecture without a certificate as required by the state law. Cavasso faced a fine of \$100 or a sentence of 30 days in jail. Sentence, however, was suspended for six months.

A. L. Bolton represented the architects in the proceedings.

TRADE NOTES

Battery and Electric Depot, Ltd., capitalized for \$25,000, has been incorporated in San Francisco. Directors are W. E. Tennant, H. L. Coggins and E. B. Jones.

Ferlinger Foundry & Machine Works, Inc., of Redding, capitalized for \$25,000, has filed incorporation papers with Secretary of State Jordan. Incorporators are Fred W. Gerlinger, L. C. Gerlinger and Ludwig S. Missigbrod.

Pacific Pavements Company, Ltd. of San Francisco, capitalized for \$10,000, has been incorporated. Directors are O. B. Christensen, J. J. Hurley and E. E. Christensen.

Bush Roofing Co. with branches at San Francisco, San Jose, Stockton, Sacramento and Chico, announces the opening of another branch at San Luis Obispo with Geo. Glavinovich as manager.

AUSTRALIA REDUCES BUILDING MATERIAL VARIETY

The widespread effort to reduce building costs through standardization and simplification of building materials has resulted in a study of the matter by the Standards Association of Australia. The Association found, after conference with architects and manufacturers, that the 150 different varieties of galvanized iron ridging, gutters and downspiping available could be reduced by 70 per cent. One hundred and twenty different sizes of plywood panels for doors were reduced by 60 per cent.

"This course," says the Australasian Manufacturer of Sydney, "is undoubtedly a wise policy to adopt, for there will be a great saving in time and labour in the temporary stopping of machinery for the purposes of re-setting; and, further, this will naturally result, ultimately, in the appreciable reduction of costs of production."

\$5,000,000 FOR WASHINGTON STATE ROADS THIS WINTER

Details of a \$5,000,000 winter road program in Washington state are announced by Samuel J. Humes, director of the Washington State Department of Highways.

The state administration prepares the program as an unemployment relief measure. Bids will be opened this month on ten projects to cost \$1,000,000.

In addition 36 projects remain to be advertised to complete the program outlined by the last Legislature. It was estimated they would cost \$4,000,000.

MOVES TO RENO

Geo. Koster, formerly located at 2355 Leavenworth St., San Francisco, has opened new quarters at 300 California Ave., Reno, Nevada, and will engage in the practice of architecture. Mr. Koster announces he has considerable business in Nevada state and is desirous of receiving catalogs and samples of materials and equipment for all type of structures.

HENRY FORD SEES MINIMUM WAGE IN U. S. AT \$27 A DAY

Henry Ford, in a new book just published, predicts that in 1950 American workmen will receive a minimum wage of \$27 a day, the 5-day week will be observed universally, and there will be no unemployment.

Ford foresees a new industrial revolution in the next 20 years, out of which the worker will emerge a man of leisure, capable of balancing production and consumption and banishing unemployment. His views are set forth in a volume entitled "Moving Forward," written in collaboration with Samuel Crowther.

The wage prediction is based on the rise in hourly stipend since 1910. Twenty years ago Ford was paying an average of 25 cents hourly and now he is paying \$1.

"If wages have been multiplied by four in 20 years they can be multiplied by more than that during the next 20 years," Ford says. "If wages do not continue to increase the fault will be of human one—it will be due to lack of intelligence."

Ford lays down four principles for American industry to follow:

"1. To make an ever-increasing quantity of goods of the best possible quality, to make them in the best and most economical fashion, and to force them out on the market.

"2. To strive always for higher quality and lower prices, as well as lower costs.

"3. To raise wages gradually but continuously, and never to cut them.

"4. To get the goods to the consumer in the most economical manner so that the benefits of low-cost production may reach him."

LOS ANGELES DREDGING WINS COURT FIGHT

The California state supreme court has affirmed \$17,024 judgment granted by the Los Angeles superior court to the Los Angeles Dredging Company against the city of Long Beach.

The suit grew out of channel dredging in Long Beach harbor in 1925. The dredging company was bound by penalties to finish the work in a specified time, but postponed operations 350 hours on the promise of the city to pay \$30 an hour for the consideration.

Cessation of dredging was asked because the operations interfered with swimming and pleasure seekers in the harbor. When the dredging company tried to collect, the city refused to pay, although the council had ratified the contract, on the ground it was not an emergency measure.

FLINTKOTE OPENS OFFICES IN SHELL BUILDING

Marking the advent of another world-wide organization into San Francisco, the Flintkote Company, producers of asphalt shingles, roofings and emulsions, will begin operations on the Pacific Coast within the next ten days, with an investment of approximately \$5,000,000 for factories, warehouses and sales offices.

The company has established Pacific Coast headquarters in the Shell Building. R. T. Perry is manager of the San Francisco division.

Warehouses and sales offices have been located at San Francisco, Los Angeles, Portland and Seattle. From these points sales of asphalt shingles, roofings, building papers, asphalt emulsions, Colas and scores of other asphaltic products manufactured by the Flintkote Company will be handled in all territories west of the Rocky Mountains.

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1684).

R-3335-S ENGINEER, preferably mechanical, 28-35 years old, for cost analysis and time study work. Experience should include both shop and outside construction estimating and preferably some time study work. Salary about \$200 month to start. Apply by letter. Location, Bay Region.

R-3353-S STRUCTURAL DRAFTSMAN, about 30 years old, technical graduate, with experience covering design and layout of steel, concrete and timber structures. Salary depends upon ability. Location, San Francisco.

R-3369-S ENGINEER, mechanical or electrical, not over 30 years, with 3 to 5 years' experience on hydroelectric plant operation for service and testing work. Must have mechanical skill, agreeable personality and be willing to travel. Salary about \$175 month and expenses in the field. Apply by letter. Headquarters, San Francisco.

R-3352-S SALESMAN for building materials and specialties. Should have 4-5 years' experience selling to architects and contractors. Location, Southern California. Headquarters, San Francisco.

R-3349-S SALESMAN, young man with car, to do promotion work for dealers. Must have experience selling roofing to owners. Salary and expenses. Location, Northern California.

R-3331-S CHEMIST, single, for analytical and experimental work in laboratory. Must have experience with ores and metals and some experience in organic chemistry. Apply by letter. Location, Chile.

W-499-C-S CIVIL ENGINEER, graduate with experience in the design and construction of sewers and water works to purchase an interest in an engineering business. Some experience in electrical engineering desirable. Apply only by letter. Location, Kansas City.

L. A. LUMBER DEALERS FORM NEW ORGANIZATION

A new organization has been formed by the lumber dealers of the Los Angeles district to be known as the Lumber and Allied Products Institute of Southern California.

Under the new plan which was put forward by President Harry A. Lake of the California Retail Lumbermen's Association, all the local groups in the district will be allied with the Los Angeles group. About 100 retail dealers have already joined the new association.

Kenneth Smith, manager of the old association, will be general secretary of the new one, having assumed his new duties October 1.

Headquarters of the institute are at 6420 Avalon Blvd., Los Angeles.

NEW PLANT FOR G. E.

Construction of a new \$1,000,000 unit at the Pittsfield plant of the General Electric Company will be started shortly. The structure will be devoted to the exclusive manufacture of transformer tanks and when completed, will be the largest transformer tank shop in the world.

DEWATERING CEMENT SLURRIES BY ELECTRICITY

In most cement plants using the wet process, the clay-lime-stone mixture is ground in water to a slurry and this thick, soupy liquid is pumped directly to the calcining kiln for dewatering and heating to high temperatures to produce the ordinary cement clinker. The dewatering is done in the cooler parts of the kiln close to the stack end while the clinkering is done at the highly-heated end close to the coal or oil burners. It is thought that a saving can be made in fuel consumption and in the size of kilns if part of the water removal could be performed outside of the kiln in more efficient types of dewatering equipment. Continuous suction filters have been used in some of the newest cement plants for this purpose and the raw material is fed into the kiln in a damp condition instead of the fluid consistency.

Tests are being made at the Northwest Experiment Station of the United States Bureau of Mines, Seattle, Washington, in co-operation with the University of Washington, on the removal of water from cement slurries by electrical methods. The electrical process under investigation uses comparatively simple equipment; a tank to hold the slurry, a fixed cathode plate, and a rotating anode drum on which the slurry collects. The partially dewatered material is scraped off the revolving drum in a layer from a quarter to three-eighths of an inch thick containing about 22 per cent water. Preliminary tests with a Seattle cement slurry indicate that about 54 per cent water can be removed with a current consumption of from 0.05 to 0.07 K.W.H. per pound of water, which is only about one-fifth of the theoretical energy necessary to evaporate the water by the usual heating agent, and a mixture of sodium silicate and sodium carbonate has given the most efficient results. This electrical process is now in use in Germany in several plants for dewatering clays in the purification of kaolins and fire clays.

THING GOES SOUTH

Fred Thinge, formerly associated with Latourette-Peal Company of Oakland, and at one time California state mechanical inspector, has entered the plumbing and steam heating contracting business in Los Angeles. He has formed a partnership with C. F. Ballinger and will operate under the firm name of C. F. Ballinger Company with headquarters at 4225 West Tenth St., Los Angeles.

COLLECTS BUILDING CODES

The American Face Brick Association has built up an extensive collection of building codes of the principal cities of the country and now has building codes or housing ordinances from some seventy cities. The Association will gladly assist members and their dealers with code matters.

BOUCHER ENTERS FIELD

The Boucher Company, Ltd., has opened offices in the Pacific National Bank Bldg., Los Angeles, under the management of Ralph D. Hornbrook, who has been identified with the building trades in Southern California for many years. The company will specialize in contractors' surety bonds and insurance, offering a state-wide service through their various offices.

HIGHWAYS ARE LEADERS TO OTHER LINES OF DEVELOPMENT

(Extracts from an address of A. Emory Wishon, vice-president and general manager of the Pacific Gas and Electric Company, at the bi-monthly meeting of the San Joaquin Valley Council of the State Chamber of Commerce, Aug. 23).

We all know that old adage, "All roads lead to Rome." At the height of the Roman Empire, when that empire represented all that was best in art, industry, science, learning and war, this was literally true.

You may say that roads follow industry, science, commerce and civilization, but that is not true. Commerce, industry, science, spiritual and social development follow road development. This has proven true in the past, and it will be true for all time in the future.

Just stop for a minute and let the history of this country spread in sequence before you. The trail builders, the ox team caravans, the railroad builders, and now the highway builders all stand forth as leaders to other lines of development. Yet major road development in this country is comparatively modern history.

The first important road in the United States was the old York Road, between New York and Philadelphia, built by the Colonies in 1711.

In the latter part of that century here on the west coast, the padres built El Camino Real—"The Highway of the King," connecting the old missions of California from San Diego on the south to San Francisco on the north.

The first toll road, the Lancaster-Philadelphia turnpike, 62 miles long, was built in 1792.

The first federal road, built for military purposes, was the old National Pike, or Cumberland Road, and was commenced in 1806.

It may be interesting to you to know that in 1819, only a little more than 100 years ago, two Conestoga wagons carrying freight were regularly dispatched each day from Philadelphia to Pittsburgh. The trip took twelve days, and the price charged was \$120 per ton.

Today what is our highway picture? There are approximately 7,000,000 miles of rural roads in the entire world, 3,000,000 of which are in the United States.

In 1904 the total expenditure for rural roads in the United States was \$59,953,181.

For the year 1928 the expenditure was \$1,423,870,278.

In California the expenditure for rural roads in 1904 was \$2,157,396.

The expenditure in this state for 1928 was \$57,702,384.

When we stop to analyze these few facts we begin to realize the progress made in road development, and following such development we find national development in agriculture, industry, education and social and economic life.

We also find that we are not the only ones to recognize what road development means to all other lines of development. Every state and country now recognizes the part that road development plays in general progress and prosperity, and as a result competition is keen in road development programs.

With such competition we must keep abreast, or lead in economic, commercial and social development.

This is not an idle statement. It is fundamental, almost axiomatic, and is supported from an analysis developed from world history.

About 1902 and 1903 expenditures

on all road development suddenly began to increase by leaps and bounds. Why? In the late 90's there appeared upon our highways the "horseless carriage"—the very name now seems quaint. That vehicle is now an amusing exhibit in certain museums, yet there is no greater difference in the horseless carriage of the 90's and the automobile of today than the difference in the roads of the 90's and the roads of today.

The "horseless carriage" introduced a new mode of transportation, it created road needs and road uses; and road expenditures have increased by leaps and bounds, but road uses have increased in even greater proportions. Today our road problem is still fundamental to our economic and social development, and is attracting the best minds of all countries. Roads must be built, expenditures must be made, and roads should be built where expenditures can be justified. It therefore becomes apparent that road development must be approached in an orderly and scientific manner that the greatest value may be obtained from the dollars spent.

We have our urban, county, state and federal roads, and in addition these various subdivisions of our government are jointly financing many projects. Proper engineering, traffic and economic studies as to location become a fundamental part of the modern road program; engineering laboratory and use tests as to type of construction; equipment and organization for construction and maintenance; proper budgeting of capital and operating expenditures and the most economic and equitable method of financing, are all now factors that are being recognized as vital to proper road programs.

One of the most outstanding accomplishments in furthering development of roads has been the development of the gasoline tax. In 1919 this tax was in effect in four states of the Union, and the total receipts from such tax was \$1,022,514. In 1928 forty-six states in the Union collected \$804,871,766 from a gasoline tax. The fact that the tax for road development and maintenance is paid by the user of the road in proportion to his use, has appeal as an equitable tax to the average citizen, as is shown by the number of states that are now financing road programs from such a tax.

Referring particularly to our California state highway system several outstanding accomplishments have been made within the past several years.

First—The resumption of the new construction on the state highway system, through the passage of the one-cent gasoline tax measure.

Second—The application of the budget system to the state highway expenditures, through which the public is now informed of the manner in which it is proposed to spend state highway money in advance of and not following such expenditures.

Third—The adoption of a definite and orderly policy governing the extensions of the state highway system.

TO CUT FORCE

The Board of Public Works of Los Angeles has ordered City Engineer Jessup to lay off 2400 employees a sufficient number of days each month to make up a deficit of \$253,000 in the garbage and rubbish collection service will be retained at full force.

BUILDING MATERIAL ADVERTISING SHOWS INCREASE IN 1930

Expenditures of \$8,993,505 were made for building material advertising during the past nine months of 1930 in national magazines, national farm magazines and for radio broadcasting, an increase of \$497,430 over the \$2,496,075 which was spent during the same period in 1929. This increase represents a 5.55 per cent increase for the nine months of 1930 over the nine months of 1929, according to the Business Survey Department of Dorrance, Sullivan & Company, New York advertising agents.

The accumulative total for the nine months of 1930 in national magazines was \$8,012,472 as against \$7,554,971 during the same period of 1929, a gain of slightly over two per cent. The accumulative total for building material advertising in national farm magazines for the nine months of 1930 was \$318,841 as against \$503,538 during the same period in 1929, a gain of 2.3 per cent. The accumulative total for radio broadcasting for the same period in 1930 was \$162,192 as compared to \$137,566 during the same period of 1929 which was a gain of 23.5 per cent.

Building material advertising in September national magazines, national farm magazines and for radio broadcasting amounted to \$910,872, a loss of \$105,325 over the September, 1929 figure of \$1,016,197, or approximately 10 per cent.

In national magazines for the month of September, 1930, advertisers spent \$806,122 as compared with \$928,317 in September, 1929, which was a loss of approximately 13 per cent.

National farm magazine building material advertising in September, 1930, was \$69,157, a loss of \$3393 over the September, 1929, total of \$72,550, or approximately four per cent.

Radio broadcast advertising during this period in 1930 amounted to \$35,593 as compared with expenditures of \$15,300 in 1929, a gain of approximately 132 per cent.

OAKLAND BUILDING PERMITS FOR OCTOBER

A. S. Holmes, city building inspector of Oakland, reports the issuance of 360 building permits during the month of September for improvements involving an expenditure of \$533,586. A complete tabulation of the September activities will be found on page three of this issue.

LUMBERMAN PASSES

M. J. Scanlon, 63, pioneer lumberman, who aided in establishing a model village for his workmen in the Powell River section in British Columbia, died in Minneapolis, Minn., October 2. The Powell River village was built in connection with Scanlon's \$55,000,000 plant there.

Scanlon was president of the Brooks-Scanlon Lumber Company of Minneapolis; the Brooks-Scanlon Corporation in Florida; the Bahamas-Cuban Company, and the Powell River Company, British Columbia.

A widow and a daughter survive.

ADOPT STANDARD SPECIFICATION

During the month of September the Standard Specification of the American Institute of Steel Construction was adopted in the cities of Albany, New York and Medford, Oregon. This brings up the list of cities using the Specification to 286.

James E. Johnston, president of the Albion O. L. Sales Co., 8 E. Long St., Columbus, Ohio, desires to secure salesmen in San Francisco to sell an automatic intermittent vegetable sprayer and display stand which prevents vegetables from wilting and shrinking.

ORDINANCE WILL GOVERN GAS INSTALLATIONS

The city council of Carmel, Monterey County, will adopt an ordinance presented by the Pacific Gas & Electric Company governing gas appliance installations. The ordinance is said to be sponsored by national safety organizations and specifies in considerable detail the materials that may be used and types of fixtures that may be installed.

The gas company's only interest in the ordinance is to protect consumers, particularly against unapproved appliances which through faulty combustion might have fatal results in use.

DECOTO TO RESIGN

EXRA W. Decoto, state railroad commissioner, announces he would not be a candidate for reappointment when his term expires at the end of this year. Decoto said he would enter private practice of law in Alameda County where he was district attorney many years.

MEDAL AWARDS FOR SMALL HOME DESIGNS

A new small house architectural competition is being conducted under the auspices of the "Better Homes in America," Washington, D. C.

Dr. Ray Lyman Wilbur, Secretary of the Interior and president of "Better Homes in America," has announced that three gold medals will be awarded each year to the architects who submit the best designs for small houses which have been erected anywhere in this country during the preceding year. Any house actually built during 1929 may be entered in the current competition, provided the cube above the level of the first floor is not greater than 24,000 cubic feet. This requirement practically limits the competition to houses of from three to six rooms.

In order to enter a house in the competition, floor plans, blue prints, two elevations, interior details and photographs of the house must be submitted to the American Institute of Architects in Washington. The awards are to be announced early in January.

VALLEJO MOVES TO PROTECT LOCAL LABOR

A movement initiated by the Vallejo Central Labor Council to amend the city charter so that Vallejo citizens will be given preference on projects financed by public coin, or by an ordinance, if a charter change is not necessary, has received the endorsement of the Vallejo Chamber of Commerce.

A tentative copy of the charter amendment provides that all preference be given in contract work let by the city to U. S. citizens or those who have expressed the intention of becoming U. S. citizens, an eight-hour day, a wage scale compatible with that in similar lines of work locally, and that preference in hiring men, be given to workmen who have resided in the city for a year or more.

INTELLIGENT REASONING

Co-operation between organizations of employers and employees means the intelligently reasoned settling of common goals and objectives by two self respecting and equally represented parties.

We believe firmly that true co-operation in the building industry can proceed genuinely only on this basis.

We expect hostile employers and anti-union business men will condemn the making of trade union agreements by employers of union labor and employees representing union labor, but we believe that such procedure to be basically correct and substantially successful to date.

We firmly believe that the truest essence of co-operation will be found between employer and employee keeping together and not by separation of one from the other.—(Boston Builders Record).

CREATE JOBS SAYS DAVIS

The best cure for unemployment is in practical construction work, and "the way to put people to work is to create jobs for them to fill," says Secretary of Labor James J. Davis.

Engineering News Section

BRIDGES

WATSONVILLE, Santa Cruz Co., Cal.—County Surveyor Lloyd Bowman announces construction on the underpass at Chittenden, estimated to cost \$50,000, will be started within two months. The project will be financed by the county and the Southern Pacific R. R.

SAN MATEO COUNTY, Cal.—Until October 29, 2 P. M., bids will be received by State Highway Commission to construct a reinforced concrete girder bridge over Redwood Slough near Redwood City, consisting of three 35-ft. spans and one 22-ft. span on concrete pile bents.

See call for bids under official proposal section in this issue.

M., bids will be received by State Highway Commission to construct reinforced concrete girder bridge over The Atchison, Topeka and Santa Fe Railway at Manhattan Beach, consisting of one 42-ft. span two 31-ft. spans and one 30-ft. 10-in. span and one 30-ft. 2-in. span on concrete bents.

See call for bids under official proposal section in this issue.

SACRAMENTO, Cal.—Until Oct. 13, 10 A. M., bids will be received by Harry W. Hall, county clerk, to construct East Fender of Walnut Grove bridge.

Certified check 10%, payable to Chairman of the Board of Supervisors required with bid. Plans obtainable from County Engineer Chas. Deterding.

LOS ANGELES, Calif.—Co. Bridge Engineer W. B. Armstrong completes plans for reinforced concrete bridge in Pomona Blvd. over Alhambra Wash; will consist of one reinforced concrete arch span, 100-ft. in length, and an overall width of 100-ft. Roadway 74-ft. wide.

SALINAS, Monterey Co., Cal.—Ben C. Gerwick, Inc., 112 Market St., San Francisco, at \$31,219 awarded contract by county supervisors to construct bridge over Elkhorn Slough on Salinas-Watsonville Highway.

STOCKTON, San Joaquin Co., Cal.—George French, Jr., P. O. Box 675, Stockton, at \$1,935 awarded contract by county supervisors to construct culverts on J. R. Russell road. Other bids: Nelson Bros., \$1,940; J. N. Kristich, \$2,043.

STOCKTON, San Joaquin Co., Cal.—Until Oct. 27, 11 A. M., new bids will be received by Eugene Graham, county clerk, to construct concrete and timber bridge over Littlejohn Creek on Kaiser Lane, one mile SE of Stockton. Estimated cost, \$1500.

Certified check 10% payable to Chairman of Board of Supervisors required with bid. Plans on file in office of clerk. Julius Manthey, county surveyor.

WOODLAND, Yolo Co., Cal.—County clerk has been instructed to advertise for bids to construct two bridges over the Winters Canal between Madison and Winters; total

cost, \$4,000. Plans on file in office of clerk.

REDWOOD CITY, San Mateo Co., Calif.—City Engineer C. L. Dimmitt making survey to determine estimates of cost for a bridge over Redwood Creek, also for replacement of the existing Bradford St. bridge. Both these projects are in connection with the proposed extension of Main St. over Redwood Creek to connect up with the Bayshore Highway, as petitioned for by property owners.

SANTA BARBARA, Cal.—County supervisors reject bids to construct steel bridge with reinforced concrete deck, web, wing walls, etc., over San Jose creek in Patterson Ave., Rd. Dist. 3. County Surveyor Owner H. O'Neill will prepare new plans. Bidders were: Merritt-Chapman & Scott Corp., \$7711.09; Roy L. Richardson, \$8741.86; Wm. Ledbetter & Co., \$10,226.

SANTA BARBARA, Cal.—Until 10 A. M., Nov. 3, bids will be received by the county supervisors for constructing a reinf. conc. bridge over San Pedro Creek in the 3rd District. Plans obtainable from county surveyor, O. H. O'Neill. D. F. Hunt is county clerk.

SANTA CRUZ, Santa Cruz Co., Cal.—C. C. Gildersleeve, Felton, at \$11,413 awarded contract by county supervisors to construct reinforced concrete arch bridge in San Lorenzo Road District over Boulder Creek at mouth end of Central Ave. in town of Boulder Creek. Will be 91-ft. long with 61-ft. span; 30-ft. wide with 4-ft. walks on either side. Complete list of bids follows:

C. C. Gildersleeve.....	\$11,413
Pacific Const. Co., Oakland.....	11,619
Leo Cardwell Const. Co., Santa Cruz.....	12,266
S. Sciarrino, San Jose.....	12,420

HUMPHOLDT COUNTY, Cal.—Until October 17, 2 P. M., bids will be received by F. W. Hazelwood, district engineer, State Highway Commission, 546 Wabash Ave., Eureka, to remove and replace the timber lift span of the bridge over Eureka Slough at Eureka, consisting of one 75-ft. truss span.

DREDGING, HARBOR WORKS & EXCAVATIONS

MARTINEZ, Contra Costa Co., Cal.—Daniels Contracting Co., San Francisco, awarded contract by Berkeley Waterfront Co. to construct a rock and pile seawall 12,600-ft. long, extending from the eastern shore of upper San Francisco Bay from the Ford plant holdings in Richmond to a point near Point Isabel in Alameda county. The Berkeley Waterfront Company recently purchased 352 acres of tidelands in the above area from Gustav Niebaum Company. It is this property which, according to unconfirmed reports, is to be developed into industrial holdings and terminal sites which will be operated largely by the Western Pacific, Great Northern and Sacramento Northern railroad interests or their allied corporations.

SAN FRANCISCO.—Until October 15 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public

Works, for dredging of a boat channel and making levee repairs at the Mills Field Municipal Airport. Estimated cost, \$2400. Certified check 10%, payable to clerk of the board of supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall, on deposit of \$10, returnable.

OAKLAND, Cal.—City council rejects bid of American Dredging Co., 250 California St., San Francisco, at \$4653 for 16,000 cu. yds. clamshell dredging at Ninth Avenue Pier. New bids will be asked.

OAKLAND, Cal.—American Dredging Co., 255 California St., San Francisco, at 29½ c. cu. yd. (\$13,982.50) awarded contract by City Port Commission for dredging in front of Market and Grove St. piers on Inner Harbor.

SAN FRANCISCO.—See "Wharves and Docks," this issue. Contemplated expenditures of State Harbor Commission on San Francisco Harbor under Measure No. 9 on the November ballot providing for the issuance of \$10,000,000 in bonds for construction.

IRRIGATION PROJECTS

MERCED, Merced Co., Calif.—Aldrin and Anderson, Turlock, at \$37,470.50 awarded contracts by Merced Irrigation District for 524,000 sq. ft. of shaping and lining canals with 2-in. concrete. Carlson Bros., Turlock, bid \$40,233.50.

TURLOCK, Stanislaus Co., Calif.—Aldrin and Anderson, P. O. Box 222, Turlock, at \$3,645 awarded contract by Turlock Irrigation District, for 54,000 sq. ft. 2-inch concrete canal lining under Schedule No. 10, Lateral Lower No. 7.

TURLOCK, Stanislaus Co., Calif.—Pacific Properties and Const. Co., 3747 Woodruff Ave., Oakland, awarded contract by Turlock Irrigation Dist., under Schedule No. 8, for construction in Improvement District No. 53 (Baxter Ditch), involving:

Section No. 1, 171,076 sq. ft. 2-in. concrete canal lining, \$16,868.09.

Section No. 2, 64 concrete check gates, involving 58,76 cu. yds. \$940.48.

Section No. 3, 34 concrete structures, involving 42.06 cu. yds., \$538.34.

MERCED, Merced Co., Calif.—Until Nov. 4, new bids will be received by Merced Irrigation District to furnish and deliver 4,000 barrels of Portland cement. Previous bids rejected. Cement is desired to which has been added at the cement mills 3 lbs. of Celite to each 94 lbs. of cement. Cement must be manufactured in the state of California. Delivered to district in commercial cement cloth and/or paper sacks in carload lots, f.o.b. Merced or any other railroad station within the district. Prices shall be quoted for delivery at Merced, with the understanding that such adjustment in prices will be made for cement delivered at other points as shall be proper in view of the difference in freight rates.

Most of the cement will be used in the concrete lining of canals and the construction of certain structures, and while it is expected that the greater

portion of the work will be completed by June 1, 1931, it is possible that some deliveries of cement may be required at intervals up to Sept. 30, 1931. Deliveries are to be made in such quantities and at such times as the District shall direct upon a maximum of three days' notice. Certified check 6% payable to district required with bid.

STREET LIGHTING SYSTEMS

VISALIA, Tulare Co., Cal.—County council declares intention (137-C) to install ornamental electrolter system with 51 two-light standards together with underground system in portions of North and South Locust St.; North and South Court St., etc. Standards of Union Metal Mfg. Company's Design No. 2281. 1911 Act. Bond Act 1915. Hearing October 29. Ida Markham, city clerk.

El Camino Real and Brewster Ave., etc., together with underground system. Union Metal Design No. 8092.

RED BLUFF, Tehama Co., Cal.—City Engineer W. F. Lunning, preparing plans for ornamental street lighting together with underground system in both sides of Walnut St. from Main St. to the Southern Pacific Railroad. Steel standards of the Street Lighting and Equipment Company of California will be specified.

MACHINERY AND EQUIPMENT

PHOENIX, Ariz.—Until October 20, 2 P. M., bids will be received by Jno. B. Brown, superintendent, U. S. Indian School, to furnish and deliver school bus, seating capacity from 45 to 50 pupils; 1½-ton chassis with dual wheels; wheel base about 157 inches. Body dimensions 14 ft. 6 inches long, 7 ft. 6 inches wide, inside height at edge 54 inches. Further information obtainable from above.

OAKLAND, Calif.—Following contracts awarded by city council to furnish motor trucks for use of City Street Department:

F. H. Dailey Motor Co., 2324 Broadway, one "H" type truck, \$577.50.
Cochran & Celli, 417 6th St., two "F" type trucks, \$938 each, and four "E" type trucks at \$893.50 each.

Durant Sales & Service Co., 2136 Broadway, four passenger type automobiles. Prices are same on coupe or touring type, at \$645 each.

SANTA CLARA, Santa Clara Co., Cal.—Until October 20, 8 P. M., bids will be received by A. J. Cronin, city clerk, to furnish and deliver motor driven street sweeper.

PHOENIX, Ariz.—Until October 21, 2 P. M., bids will be received by John B. Brown, superintendent, U. S. Indian School, Phoenix, to furnish one hollow arm post sander, arms to be approximately 4 ft. 8 in. long, sand disc about 8 inches; equipped with special exhaust fan, vertical motor coupled to counter shaft and standard motor base and pulley for belt drive. Electric power, 220V., 3-phase, A. C., 60-cycle. To be used for surfaces such as doors, sash and table tops. Sander and extra equipment to be equal to Yates-Armstrong No. 12. Delivered f. o. b. shipping point designated by bidder or f. o. b. Phoenix, Ariz.

STOCKTON, San Joaquin Co., Cal.—County Purchasing Agent W. Y. Tretheway authorized by supervisors to purchase two 2-ton motor trucks and a station wagon for the Highway Maintenance Department, allowances to be made for two old Reo trucks and Dodge no longer required by the county.

RAILROADS

NEVADA—Bids will be asked shortly by the U. S. Bureau of Reclamation, Denver, Colo., to construct seven miles of railroad from Boulder City Dam. It is proposed to start construction on November 1.

SAN FRANCISCO—See "Wharves & Docks," this issue. Contemplated expenditures of State Harbor Commission on San Francisco Harbor under Measure No. 9 on the November ballot providing for the issuance of \$10,000,000 in bonds for construction.

FIRE ALARM SYSTEMS

LOS ANGELES, Cal.—Until Oct. 20, 2 P. M., bids will be received by the county supervisors to install traffic control signals at intersection of Long Beach Blvd. and Olive St., Compton. Name B. Besty, 303 Hall of Records, is clerk of the board.

FIRE EQUIPMENT

LOS ALTOS, Santa Clara Co., Cal.—Chamber of Commerce proposes to organize fire district and raise \$4000 to finance purchase of motor fire

equipment. F. W. Aust is manager of the Finance Committee.

GEYSERVILLE, Sonoma Co., Cal.—Geyserville Chamber of Commerce is raising \$1500 by private subscription to finance purchase of fire truck, hose and chemicals.

SAN FRANCISCO.—Until Oct. 20, 3 P. M., under Proposal No. 644, bids will be received by Leonard S. Leavy, city purchasing agent, 270 City Hall, to furnish and deliver cotton rubber-lined fire hose for Fire Department:

2,000 ft. 2½-inch;
12,000 ft. 2½-inch;
5,000 ft. 1½-inch.

Specifications obtainable from above office.

MESA, Arizona.—Until 5 P. M., Oct. 21, bids will be received by the city council to furnish the following: 300 ft. of 2½-in. and 50 ft. of 1½-in. of either double jacketed or multiple-woven, rubber lined, cotton fire hose in 50-ft. lengths, with couplings attached of a pattern conforming to the city of Mesa standard. J. E. Miller, city clerk.

RESERVOIRS AND DAMS

LAKEPORT, Lake Co., Cal.—Smith Bros. Co., Eureka, at \$2,932 awarded contract by city council to construct reinforced concrete reservoir in connection with the municipal water works system. Excavation has been completed under a separate contract.

SAN BERNARDINO COUNTY, Cal.—Metropolitan Water Dist. of Southern California has filed application with State Department of Public Works, Division of Water Rights, seeking authorization to construct a dam in San Bernardino county to impound 717,000 acre feet of water from the Colorado river. The diversion system is to cost \$20,000,000. The concrete dam is to be 270 feet high and 550 feet long. The power plant is to have a capacity of 168,000 horsepower. The impounding area is to include lands in San Bernardino County, Cal., and Yuma and Mojave Counties, Arizona.

TURLOCK, Stanislaus Co., Cal.—Turlock Irrigation District plans immediate construction to raise the La Grange dam two feet. When completed, dam will be 128 feet in height. R. V. Melkel is chief engineer for the district.

PIPE LINES, WELLS, ETC.

MERCED, Merced Co., Cal.—Osterberg Bros., Modesto, awarded contract by Merced Irrigation District for drilling and casing three drainage wells.

SEWERS AND SEWAGE DISPOSAL PLANTS

OAKLAND, Cal.—Until Oct. 16, 12 noon, bids will be received by Frank C. Merritt, city clerk, to construct drainage structures and sewers in portions of Hopkins St., Midvale Ave., and other streets; estimated cost \$25,000; pipe 8-in. from 30-in. Bond of one-fourth amount of contract price required with bid. Plans on file in office of clerk. Walter N. Frickstad, city engineer.

REDWOOD CITY, San Mateo Co., Cal.—George DeGolyer, Federal Telegraph Bldg., Oakland, Bond \$3,846.50 awarded contract by city council to construct 18-in. concrete pipe storm sewers in El Camino Real, one fronting the Sequoia High School Campus, another at Finger Ave., and a third in the vicinity of Jackson St.

MADERA, Madera Co., Calif.—As previously reported, Thompson Bros., Fresno, at \$18,403.41 awarded contract by city trustees to construct 357 ft. 15-in. vlt. sewer; 4763 ft. 12-in. do; 2216 ft. 10-in. do; 2018 ft. 8-in. do; 10,365 ft. 6-in. do; 60 ft. 12-in. cast iron pipe sewer; 12 ft. 6-in. do; 41 concrete manholes; 17 clay lampholes; one 50 G. P. M. sewage ejector (alt. bids on single and duplex units); one concrete sump. Complete list of bids follows:

Thompson Bros., Fresno.....	\$18,403
Stroud Bros. & Seabrook, Bakersfield.....	18,553
W. J. Tobin, Oakland.....	18,553
J. T. Clinch, Oakland.....	19,385
G. C. DeGolyer, Oakland.....	19,952
P. & H. Const. Co., San Jose.....	20,173
Fred Meyers, Hayward.....	20,425
Heafey-Moore Co., Oakland.....	21,814
J. C. Hickey, Albany.....	23,410

ARCATA Humboldt Co., Calif.—A. Brizard, Inc., Arcata, at \$2736 awarded contract by State Department of Public Works, Division of Architecture, to construct 6-inch sewer at Humboldt State Teachers' College.

WATSONVILLE, Santa Cruz Co., Calif.—Granite Construction Co., Watsonville, at \$958.60, awarded contract by city council to construct 1,045 ft. of 6-inch sewer in Monte Vista Ave. Other bids: P. J. Freiermuth Co.,

WATER WORKS

SAN JOSE, Santa Clara Co., Calif.—County supervisors petitioned to authorize formation of a water works district in the section immediately south of Palo Alto. The proposed district is bounded by the Bayshore highway, Arroyo and East William roads, Seale ave. and the boundary line bet. Santa Clara and San Mateo counties. After formation the district would vote bonds of \$30,630 to finance construction of a distributing system. Water would be secured from the San Francisco Municipal System, from the Palo Alto Municipal System and district wells. Hearing of the petition has been set for November 3.

SACRAMENTO, Calif.—Until Oct. 16, 5 P. M., bids will be received by H. G. Denton, city clerk, to furnish and deliver for Water Mains Division, 125 4-in. and 50 6-in. gate valves.

Certified check 5% payable to City Controller required with bid. Specifications on file in office of clerk. Fred J. Klaus, city engineer.

SACRAMENTO, Calif.—Until Oct. 16, 5 P. M., bids will be received by H. G. Denton, city clerk, to furnish and deliver 100 4-inch valve opening fire hydrants for Water Mains Division.

Certified check 5% payable to City Controller required with bid. Specifications on file in office of clerk. Fred J. Klaus, city engineer.

Bids To Be Asked Shortly.

WATER SOFTENER Cost, \$——
SAN FRANCISCO. Letterman General Hospital.
Furnish and install water softener at power plant.
Owner—U. S. Government.
Architect—Constructing Quartermaster, Fort Mason.

SANTA ROSA, Sonoma Co., Calif.—City council rejects bid of Water Works Co., San Francisco, to clean water mains in various sections of the city.

RED BLUFF, Tehama Co., Calif.—Time set by city council to furnish and deliver 1000 feet of 4-inch cast iron pipe, class 100 lb. pressure or heavier, has been extended to October 13, 7:30 P. E. Stevens is engineer for the municipal department.

SAN FRANCISCO—Board of Supervisors has authorized the Bureau of Engineering to prepare plans to furnish and install pipe, pumping equipment and auxiliaries to convey water from the East Bay Municipal Utility District to the Hetch Hetchy system. Bids will be asked on completion of the plans. The project will be financed from the 1928 Hetch Hetchy Bond Fund. N. A. Eckart is chief engineer of the Municipal Water Department.

LOS ANGELES, Calif.—Until 11 a. m., Oct. 14, bids will be received by the city purchasing agent, Thomas Oughton, for Mueller metre sealing device; Spec. 2193.

LOS ANGELES, Calif.—City purchasing agent awarded contracts as follows to furnish pipe under Specification 2187:

National C. I. Pipe Co., 4752 lin. ft. 20-in. c. i. pipe, \$3.68 ft., and 4,308 lin. ft. 24-in. c. i. pipe, \$4.51 ft. (two delivery points).

U. S. Pipe and Foundry Co., 5760 lin. ft. 16-in. c. i. pipe, \$2.90 ft., and 9,120 lin. ft. 16-in. c. i. pipe, \$2.53 (two delivery points).

American C. I. Pipe Co., 11,316 lin. ft. 24-in. c. i. pipe, \$4.90 ft.

MERCED, Merced Co., Calif.—Bids received by Merced Irrigation District to furnish and install three drainage pumps and motors complete, have been referred to A. Blakesley, chief engineer, for tabulation and recommendation of award.

TERRA BELLA, Tulare Co., Calif.—Following bids taken under advisement by Terra Bella Irrigation District for cleaning and protective coating on approximately 20,000 feet of 26-in. to 30-in. riveted pipe, which is laid in the ground with approx. 18-in. of covering. The pipe line is located from about 1½ miles east of Terra Bella to a point about 1 mile north and 1½ miles west of Terra Bella:

Universal Air Brush Co., 1 coat, \$8,166.25; 2 coats, \$11,366.25.

Campbell-Reichert Co., \$12,606.25. Ben C. Gerwick, Inc., labor and material plus 15 per cent.

General Paint Corp., \$2.30 ft. 30-in., with 5-year guarantee; \$2.16 ft. 28-in., 5-year guarantee.

Borwick Trenching Corp., Ltd., ½-in. thick, 88c per ft. cold (alternate, cost plus overhead plus just profit).

OAKLAND, Calif.—Following contracts awarded by East Bay Municipal Utility District to furnish and deliver cast iron pipe, as per unit bid listing published in issue of September 26:

U. S. Pipe and Foundry Co., Monadnock Bldg., San Francisco, 25,000 lin. ft. 6-in. Class 250, 59c ft. (\$14,750).

17,000 lin. ft. 8-in. Class 250, 89c ft. (\$15,130).

616 tons 12-in. Class "B", \$33.70 ton (\$23,839).

437 tons 16-in. Class "B", \$33.70 ton (\$17,348).

Pacific States C. I. Pipe Co., Hunter-Dulin Bldg., San Francisco, 15,000 lin. ft. 4-in. Class 150, c. i. pipe, \$3.5c ft. (\$5,250).

TERRA BELLA, Tulare Co., Calif.—Universal Air Brush Co., at \$151.75 with alt. bid of \$565.75, submitted low bid to Terra Bella Irrigation District for cleaning and covering with a protective coating the inside of the district's 8,000-barrel stand pipe, five miles east of Terra Bella. Other bids: Campbell-Reichert Co., \$663.35; Wailes-Dove-Hermiston Corp., \$831.85; E. Anderson (sand blast), \$940 hot and \$840 cold; General Paint Corp., \$1,032 furnishing one-year guarantee. All bids taken under advisement.

SAN MATEO, San Mateo Co., Calif.—Bids will be asked at once by city council to install new pumping plant in city park to replace the present equipment; estimated cost \$1200. Plans on file in office of E. W. Foster, city clerk.

SEATTLE, Wash.—Until October 10, A. M., bids will be received by G. W. Rogers, secretary, Board of Public Works, to construct the Cedar River pipe line No. 1 and a pipe line for West Seattle; estimated cost \$1,700,000.

Work will consist of furnishing and installing a steel pipe line replacing the No. 1 Cedar river pipe line from a point near the Lake Youngs controlling works, to Beacon Ave. and Leo St., and a steel pipe line from a connection with the city's main supply lines on Beacon Ave. at Moore St. to a connection with a proposed distributing reservoir near Fourth Ave. SW and W Henderson St., together with the necessary appurtenances.

Pipe used on the Cedar river pipe line will be 66 inches in size. The official call for bids appears in the Journal of Commerce today.

This work does not include the distributing reservoir and two standpipes for West Seattle that are planned at a cost of \$700,000. T. J. Carver, assistant city engineer, in charge of plans for this work, states that estimates on these units will probably be called within two weeks.

PLAYGROUNDS & PARKS

SANTA ROSA, Sonoma Co., Calif.—Until October 21, 5 P. M., bids will be received by Ney L. Donovan, city clerk, to furnish material and construct Rose Portal in Fremont Park. Certified check 10% of contract price required with bid. Specifications obtainable from city engineer.

California Corrugated Culvert Co., West Berkeley, Calif., 4,251	

SANTA MARIA, Santa Barbara Co., Cal.—City council declares intention 358 to improve Cypress St., between Broadway and Suey Ave., and portions of other streets, involving 4-in. asph. conc. pavement, 3-in. oil macadam, cement gutters, walks, driveways, etc. 1911 Act. Protests, Oct. 20.

OFFICIAL PROPOSALS

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M. on October 29, 1930, at time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

San Mateo County, a reinforced concrete girder bridge across Redwood Slough near Redwood City (IV-S.M-68-C), consisting of three 35'-0" spans and one 22'-0" span on concrete pile bents.

Los Angeles County, a reinforced concrete girder bridge over The Atchison, Topeka and Santa Fe Railway at Manhattan Beach (VIII-LA-60-C), consisting of one 42'-0" span, two 31'-0" spans, one 30'-10" span and one 30'-2" span on concrete bents.

Proposal forms will be issued only to those Contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 644, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a Contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of

proposal, bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS.

C. H. PURCELL,

State Highway Engineer.

Dated October 1, 1930.

OAKLAND BUILDING SUMMARY

Following is a segregated report of the September, 1930, building activities for Oakland, as issued by City Building Inspector A. S. Holmes, based on the number of building permits granted:

Classification of Bldgs.	No. of Permits	Cost
1-story dwelling	23	\$1,420

Legal Notice

**STATEMENT OF OWNERSHIP,
MANAGEMENT, CIRCULATION,
ETC., REQUIRED BY THE ACT
OF CONGRESS OF AUGUST 24,
1912.**

OF BUILDING & ENGINEERING
NEWS, published weekly at San
Francisco, California, for October 1,
1930.

State of California, City and County
of San Francisco, ss.

Before me, a Notary Public in and
for the state and county aforesaid,
personally appeared J. I. Stark and
R. J. Rath, who, having been duly
sworn according to law, deposes and
says that they are the owners of the
BUILDING & ENGINEERING NEWS,
and that the following is, to the best
of their knowledge and belief, a true
statement of the ownership, manage-
ment (and if a daily paper, the cir-
culation), etc., of the aforesaid pub-
lication for the date shown in the
above caption, required by the Act
of August 24, 1912, embodied in Sec-
tion 411, Postal Laws and Regulations,
printed on the reverse of this form,
to wit:

1. That the names and addresses
of the publisher, editor, managing
editor, and business managers are:

Publisher, Stark-Rath Printing &
Publishing Co., 547 Mission St., San
Francisco.

Editor, J. P. Farrell, 1258 39th Ave.,
San Francisco.

Managing Editor, J. P. Farrell, 1258
39th Ave., San Francisco.

Business Managers, R. J. Rath, 786
31st Ave., San Francisco, and J. I.
Stark, 778 30th Ave., San Francisco.

2. That the owners are:

Stark-Rath Printing & Publishing
Co., 547 Mission St., San Francisco.
R. J. Rath, 786 31st Ave., San Fran-
cisco.

J. I. Stark, 778 30th Ave., San
Francisco.

A. R. Miller, 869 Trestle Glen Road,
Oakland.

3. That the known bondholders,
mortgagees, and other security holders
owning or holding 1 per cent or more
of total amount of bonds, mortgages,
or securities are: none.

4. That the two paragraphs next
above giving the names of the own-
ers, stockholders, and security holders,
if any, contain not only the list of
stockholders and security holders as
they appear upon the books of the
company but also, in cases where
the stockholder or security holder
appears upon the books of the com-

pany as trustee or in any other
fiduciary relation, the name of the
person or corporation for whom such
trustee is acting, is given; also that
the said two paragraphs contain
statements embracing affiant's full
knowledge and belief as to the cir-
cumstances and conditions under
which stockholders and security hold-
ers who do not appear upon the books
of the company as trustees, hold stock
and securities in a capacity other
than that of a bona fide owner; and
that affiant has no reason to believe
that any other person, association, or
corporation has any interest direct or
indirect in the said stock, bonds, or
other securities than as so stated by
them.

STARK-RATH PTG. & PUB. CO.,
Publishers
R. J. RATH, Secretary.

Sworn to and subscribed before me
this 30th day of September 1930.

(SEAL) CHALMER MUNDAY,
Notary Public in and for the City
and County of San Francisco, State
of California.
(My commission expires Oct. 25, 1933)

HELLER COMPANY SUED FOR \$20,057 ON ACCOUNTS

A suit to collect \$20,057.07 from the
H. E. Heller Company of Stockton on
liabilities has been transferred from
the San Francisco Superior Court to
the San Joaquin county courts.

The suit was originally filed in
August, 1929, by George J. Miller, to
whom the accounts have been as-
signed by the creditors. Defendants
are Clyde Waterman, C. E. Kennedy,
H. H. Bosen and John Doe, stock-
holders of the Heller Company.

Accounts are listed as Baker,
Hamilton & Pacific Co., \$1538.98; Pen-
insula Iron & Steel, \$4.50; Wilkes,

\$1750 on promissory note.

PASADENA ROOFERS ORGANIZE

Fred P. Clyde has been elected
president of the Pasadena Roofing
Contractors' Association, recently or-
ganized. John W. Lytle was named
vice-president and Jack Horner, sec-
retary.

Ed Massie, C. G. Bell and W. G.
Brunfield were named as a commit-
tee to draft the constitution and by-
laws. The representative roofers of
the Pasadena district present were: R.
T. Best, W. G. Brunfield, Jack Hor-
ner, J. A. Ellis, C. E. Eppard, John
W. Lytle, C. G. Bell, Ed Massie, E. A.
Hemstead, B. L. Whitmore, J. A.
Renshaw, Frank Lander and Fred P.
Clyde.

Shutz Paint and Wall Paper Co.,
1901 Fresno St., Fresno, has been in-
corporated and will engage in a gen-
eral wholesale and retail business in
paints, wall paper and similar mer-
chandise. One hundred shares of com-
mon stock, with no par value, will be
issued.

A "Pittsburg" Auto-
matic Water Heater
installed in the Home
indicates high quality
throughout

Recommended and speci-
fied by all the leading ar-
chitects, plumbers and
builders.

Consider the high merit
of the Pittsburg coupled
with "Pittsburg Perfect
Service."

"Hot water quick as a
wink."

Building and Engineering News will be sent to subscribers until ordered stopped and all orders to discontinue must be sent in writing to this office.

R. H. ORR HEADS STATE ARCHITECTS

Robert H. Orr of Los Angeles was elected president of the State Association of California Architects at the annual meeting of that body in Del Monte last week.

Charles F. B. Roeth, Oakland; G. Stanley Wilson, Riverside, and Albert J. Evers, San Francisco, were chosen vice-presidents. Chester H. Miller, Oakland, was named secretary; L. G. Scherer, Los Angeles, assistant secretary; A. M. Edelman, Los Angeles, treasurer; William Garren, San Francisco, assistant treasurer.

Members of the executive board are Frederick H. Meyer, San Francisco; Richard C. Farrell, Alhambra; Alfred P. Priest, Glendale; Harris C. Allen, Oakland; Henry C. Collins, Palo Alto; John J. Donovan, Oakland, and Mark T. Jorgensen, San Francisco.

By unanimous vote the architects pledged the full co-operation of the association to prevent the defacing of California's scenic highways with billboards, shacks and other unsightly structures.

Another resolution gave unanimous endorsement of the Golden Gate Bridge project.

FRESNO BUILDERS' EXCHANGE AGAINST DAYLIGHT SAVING

Building activities in Fresno, as well as all the other sections of California, will decrease under the so-called daylight saving plan, according to members of the Fresno Builders' Exchange.

A resolution urging defeat of the proposed legislation has been adopted by the exchange, it is announced by Harry Cayford, secretary-manager of the organization.

The measure, according to the resolution, "is economically unsound, will cause further business depression by interfering with the established order of business, will interfere with the established habits of people, will interfere with established schedules of industry, will inflict financial losses and possible ruin upon many business enterprises and will interfere with the normal habits of the workman and woman and increase the percentage of sickness; will inflict hardships upon school children and will facilitate stock gambling."

LUMBERMEN ADOPT "FIRM PRICE LIST PLAN"

California white and sugar pine manufacturers have adopted a "firm price list plan" for sales similar to that put into effect by the West Coast Lumbermen's Association for rail shipments. Under this plan each firm issues its own price list and no sales may be made at a less price during the life of the list. However, each firm may issue a new list whenever it wishes to do so.

COAST BUILDING OFFICIALS CREATE RESEARCH DEPT.

A research department was created by the Pacific Coast Building Officials' Conference at the annual convention at Long Beach.

The proposal was presented by a sub-committee of the executive committee, which stated in its report that there was necessity for some way to officially determine the merits of various building materials and appliances which had not already received the approval of some one of the recognized bureaus or committees on standards.

Managing Secretary David H. Merrill, who presented the report, stated there were samples of four or five materials now in his office awaiting approval by the conference which had not been passed upon by any one of the existing bureaus.

A suggested plan submitted by the committee was to place the research department under the control of a committee of nine members to be made up of three from each of the northern, central and southern districts. Where the materials were of importance only to a single district they were to be passed upon by the three members of the district concerned, tests to be made in the presence of at least two members. In cases where materials were of wider importance they were to be passed upon by the entire committee, which was to be represented at the tests by not less than three members. Costs of tests will be borne by the firms or individuals requesting them.

A requirement that tests should be made at the laboratories of recognized bureaus and committees on standards, when such were available, precipitated a debate which brought out that this might necessitate members traveling long distances to laboratories in Washington, Chicago and other places to witness tests, which it might not be convenient for them to do.

As a result of the discussion, it was decided that the details of the plan should be worked out by the research committee after a more thorough study of the matter. The president of the conference was authorized to appoint the new committee. Names of the members will be announced later.

STEEL ORDERS DECREASE

Unfilled orders of the United States Steel Corporation decreased 155,866 tons in September to a total of 3,424,338 tons September 30. In August a decrease of 441,551 tons was shown. The back log of August 31 was 3,580,204 tons. On July 31 unfilled orders aggregated 4,922,055 tons. On June 30 the total unfilled tonnage was 3,968,064, and on September 30, 1929, unfilled orders amounted to 3,902,581.

LATOURETTE-FICAL RETIRES FROM BUSINESS

Latourrette-Fical Company, since 1876 specializing in plumbing, heating and ventilating, electrical and sheet metal work, is retiring from business. Unfilled orders and contracts will be completed but no new work undertaken, officials of the company announce.

M. H. Carpenter and J. H. Mendenhall will continue the plumbing, heating, ventilating and sheet metal business and Chas. E. Turner will continue the electrical business at the old address, 907 Front street, Sacramento.

The business was founded in 1876 by P. H. Latourrette and was continued in 1898 by J. Latourrette and then Latourrette & Fical in 1905 and the corporation of Latourrette-Fical Co. was formed in 1910.

Mr. Latourrette will continue at the Sacramento address until such time as all undertakings shall have been completed.

BUILDING OFFICIALS CONFERENCE ELECTS OFFICERS

S. P. Koch, building inspector of Berkeley, was elected president of the Pacific Coast Bldg. Officials' Conference at recent convention of that body at Long Beach. C. D. Wallis of Long Beach was elected first vice-president; A. J. Bird of Vancouver, B. C., second vice-president, and D. H. Merrill, Long Beach, was re-elected managing secretary-treasurer.

Members of the new executive committee elected are:

To serve one year: Northern district, W. A. Pinney, Salt Lake City, Utah; central district, W. A. Curtis, Stockton; southern district, C. B. Pickett, Coronado.

To serve two years: Northern district, P. H. Spangenberg; central district, A. J. Hurley, Richmond; southern district, J. C. Largent, Albuquerque, N. M.

To serve three years: Northern district, R. W. Fundlett, Eugene, Ore.; central district, C. L. Baker, Alhambra; southern district, G. S. Moore, Austin, Texas.

CALIFORNIA LOADBEARING TILE STRENGTH

The American Society for Testing Materials designates three grades of loadbearing tile for use in building construction.

Loadbearing tile manufactured in California will be invariably found to comply with, and in most cases exceed the requirements for the highest grade.

Compressive strength based on gross area side construction, average of 1000 pounds per square inch with individual minimum 700 pounds.

Average water absorption by 1 hour boiling, maximum average 12% with individual maximum 15%.

TRADE INSTITUTE IS MEANS TO ASSURE BUSINESS PROFITS

Address of Chas. F. Abbott, Executive Director, American Institute of Steel Construction, at the 1930 Convention of the National Association of Ornamental Iron and Bronze Manufacturers at Baltimore, Md.

Trade associations are facing a crucial test, according to Mr. Abbott. Industrial institutes have concentrated on technical improvements, elimination of waste and other reforms, and now it is necessary that they bend their efforts to improve profits in business, he says.

"With all the material facilities at our hands," said Mr. Abbott, "are we able to insure normal profits to the normal business enterprise? With all the skilled workmanship at our control, with all the banking resources to aid us, and all the raw materials within our reach, have we found an adequate means of insuring normal profits to our undertakings?"

"It is a notorious fact that we have not, and it is an even more notorious fact that many of our business executives are unwilling to test the effectiveness of such palliatives as we have to offer. This is by far the gravest problem before us today."

Mr. Abbott analyzes the functions of a trade institute. His views prove food for thought. They are published herewith.—Editor.

American business is inventive. It has largely solved the problems of production. It can produce all the goods that mankind desires, and can produce them in any quantity and any quality that the consuming public will take them. American finance is potent and willing to back up production genius. All the capital business requires can be raised upon a moment's notice.

But with all these facilities at our hands, are we able to insure normal profits to the normal business enterprise? With all the skilled workmanship at our control, with all these banking resources to aid us, and all the raw materials within our reach, have we found an adequate means of insuring normal profits to our undertakings?

It is a notorious fact that we have not, and it is an even more notorious fact that many of our business executives are unwilling to test the effectiveness of such palliatives as we have to offer. This is by far the gravest problem before us today. The time for dreamers is past. We are called upon to face a serious, complex problem.

In most cases where unsatisfactory profits exist the causes may be attributed largely to

- Individual Selfishness
- Excess Capacity
- Obsolete Equipment
- Inefficient Management
- Inadequate Costs
- Poor Salesmanship
- Ignorant Competition

There are other causes, but these problems in most industries represent the real hazards to be overcome. Existing legislation prevents agreements that involve price fixing or attempts to restrict free competition.

Experience has proven that any reliance upon price-fixing agreements has failed to improve conditions because of the dishonesty of at least some of those who participate.

Furthermore price regulation and control over competition both are unsound, uneconomic and against public welfare. We can be more constructive through education, standardization, simplification and the elimination of waste.

There may be need for certain modifications in the present laws, or at least, proper interpretations, but in the main the solution of the problems of profitable operation rests in the initiative of each industry itself and of each business executive. The elimination of all unethical, unfair and unjust methods, recognition of the spirit of live and let live, and the application of efficient, intelligent management offers the greatest assurance of permanent success to a business and to an industry.

A properly prepared program to be executed by an institute or industrial trade organization would furnish the necessary leadership and inspire co-operative action.

There are but few who still refuse to accept the vital need of co-operative organization of an industry as offering the truly practical means for bringing the desired improvements. They are the weak links in the chain. They are the non-co-operators who prefer to ride free while their competitors pay. They actually lose while they think they gain.

In these times when all business is passing through an economic transition the need for organized co-operative effort should be apparent. To place any reliance upon individual effort to cope with the many complex problems now confronting all industries is a hopeless waste of time.

New problems are being created, old methods are being scrapped as the new forces are at work. The old ideas must give way to the new. Each industry must clean its own house and modernize. No one individual is big enough to perform miracles for an entire industry. It is only through co-operation and constructive education that any progress can be hoped for.

The modern institute or trade organization offers the only solution to industrial advancement. Individual benefits are enjoyed only as the industry prospers. It is a fallacy to be lieve that any one company can profit at the expense of the industry as a whole. The general acceptance of this economic law would soon convert the destructive, non-co-operator into a whole-hearted co-operator. His attitude would change as soon as he could realize the hopelessness to insure progress through reliance upon individual isolation.

New conditions call for expert management. The efficient executive is constantly alert seeking all available information and facts pertaining to all industrial activities. He wants the latest information and all the developments pertinent to all phases of his business relations. How can he possibly be equipped if he insists upon isolating his company from all the activities of his organized industry? It would be a case of playing a lone hand with all the cards stacked against him. In these times no real progressive management would tolerate for a moment any reliance upon narrow individualism.

The progressive leader is out in front, in the midst of things. He acts safely and wisely because he knows he is in possession of the facts. He depends upon co-operation, he encourages co-operative effort because he knows that success for himself and his company follows the progress of his industry. This type reflects the new leader in business, the creative constructor and the builder. He wins while the other fellow loses.

Given proper support, the efficient trade organization can and should lead its industry out and away from most of its perplexing difficulties. Profitable operation under present conditions depends to a large extent upon proper and intelligent understandings and relations between competitors. Ignorant individual selfishness which is a principal cause of impaired prices and profits can be supplanted by a more enlightened form of competition as constructive education becomes intensively applied.

Educational measures cannot succeed if one competitor attempts to instruct another, but it does become effective when applied by the staff of an industrial institute who are free of all commercial or selfish interests. It is well to bear in mind that the institute does not function exclusively for the benefit of an industry it represents. Its true position is that of an independent unit that serves unselfishly the buyer, the public and the industry without any partiality or favoritism. In this way public confidence and support is obtained and a co-ordination of private interests is formed that develops power and influence.

With such a position once obtained the institute can proceed with its program to insure fair prices and profits and do so legally and equably.

I have already listed the more important problems that influence unsatisfactory prices and profits. Now I wish to review briefly just how a well organized institute can bring about more stable conditions.

If members of an industry are to get together and deride and complain about their competitors, criticize prices and expound personal ambitions about co-operation and talk loudly about the need of united action, then it will inevitably wind up like the brawling cat fight in a back yard.

There must be higher ideals and motives expressed in a comprehensive program that includes research and similar constructive activities. If the interest and support of the more successful concerns is to be obtained. Busy men have no time for the little, play-thing things in business. They are more concerned with the big ideas that will promote and build business.

Individual selfishness is undoubtedly prompted by a remnant of animal instinct still found in human beings. An animal becomes vicious and will fight when it is attacked or when it is hungry. The same instinct becomes active when a business organization is attacked or when it needs business to keep going.

The boa constrictor is one of the deadliest of all reptiles. When he awakes and becomes hungry he crawls out into the clearing and he is vicious. But if he is thrown a loaf of bread he will swallow it and return to

the jungle and go to sleep again. He is then peaceful and harmless.

It is exactly the same with a business organization without sufficient business to absorb its overhead to say nothing of a profit.

Education, properly directed by an institute, can develop a recognition of the spirit of live and let live. It can develop ignorant competition into a more enlightened form. It can, through its meetings and conventions, extend an acquaintanceship among competitors and their families that frequently ripens into sincere friendship.

By this process confidence in one another becomes established and outbursts of selfishness become less in evidence. In the last analysis selfishness flourishes through misunderstandings and lack of confidence. Once confidence in one another is developed selfishness begins to evaporate as faith and trust become established in its place.

Inadequate Costs

Prices and profits should be based upon accurate costs. To the total cost should be added a profit to establish the sale price. In no other way can a business endure. Industry must be taught that a million times nothing is still nothing.

Profitable operation calls for the lowest cost consistent with quality. Costs should be constantly studied and observed as they form the key to business success.

The institute should promote programs of standardization, simplification and the elimination of waste. It should always be on the alert to reduce costs and to prevent competitive materials from obtaining any advantage.

Education should constantly be applied to bring about a general recognition and acceptance of the fundamental law that costs plus profit should always be in evidence in the establishment of all sales prices. The best influence should constantly be exerted to eliminate the vicious system of attempting to outguess competition as a means of obtaining a selling price.

Uniform cost accounting systems should be developed by the institute and their principles become accepted and applied as a result of education.

Experience has demonstrated that education as applied to cost has proven effective. As progress is made more intelligent prices follow. As prices become based upon accurate costs then losses are converted into profits, and industry begins to experience the stability of profitable operation.

Poor Salesmanship

One of the principal causes of unsatisfactory prices and profits is inefficient salesmanship.

Failure to apply a single bid policy, to recognize profit instead of volume, to refrain from price cutting and other similar destructive selling methods has had a tendency to reduce selling to the level of horse trading.

Here is an opportunity for an institute to conduct a worthwhile program of education that can contribute largely to better prices and profits as the character of salesmanship becomes improved.

Courses in sales training can be prepared, sales literature can be published and distributed, in fact there are many ways to produce better salesmanship.

Codes of Trade Practice should be adopted. A Code of Standard Practice should represent the rules of the industry to control all relations between buyers and sellers and to eliminate misunderstandings and controversies.

The institute should lead in bring-

ing about aggressive supervision over all salesmen. It should lead salesmen to fight for the product of the industry and to do so on a co-operative basis.

The continued application of sales education reflects itself in higher selling standards. Prices begin to improve thereby influencing better profits. The institute is in a strong position to wield a constructive influence over the buyer as well as the seller and it should be fully utilized.

Inefficient Management

Management that is lacking in ability presents another problem that affects prices.

With limited vision such management as there is depends too much on individual aggressiveness and selfish thinking in the mapping out of its policies. This type of management frequently frowns upon the idea of co-operative effort. They seem to be satisfied to go-it-alone in their own way and usually with insufficient facts and information with which to steer a safe course.

Education as made available to these individuals on the part of the institute has in the majority of instances been well received. There are many examples of striking improvements as intelligent planning and control have supplanted the careless guesswork that too frequently in the past has been based upon unintelligent information.

Obsolete Equipment

There are some companies in all lines of business attempting to compete with obsolete plants and equipment. In their struggle to obtain business they are forced to quote prices without any regard to cost. It is this type of competition based upon inefficiency and ignorance that presents a demoralizing influence on both prices and profits.

Modernization of both plant and equipment is essential if a company is to remain permanently in business.

The institute in its educational program should encourage efficient operation as a means of reducing costs and in doing so bring the character of competition up to a higher standard of intelligence.

Excess Plant Capacity

Production output tuned up in excess of demand encourages price cutting and impairs profits. There are still some obsessed with the idea of mass production, disregarding the vital need of a susceptible market to absorb the output and at a profit. It is far more desirable to operate on a basis of 60% output at a profit instead of 100% at cost or less than cost.

The theory of rationalized output in keeping with the consumption demand is a lesson industry must learn. The institute is the logical instructor. In the meantime programs of research to develop new uses and to extend present markets are the proper approach to the problem on the part of the institute. Advertising, publicity and field representatives support the campaign. A fighting spirit of the industry on the part of all individuals should be developed. The industry must co-ordinate its efforts in aggressively fighting for a greater use of its product and preventing its displacement by the substitution of competitive materials.

This is all in line with the educational work of the institute and a part of its program.

As present markets are further extended and new uses and applications are perfected consumption increases, and as consumption increases the problem of excess plant capacity is dissipated. The institute should discourage any attempt to engage in a further extension of capacity output

as consumption is increased and if this control is successful prices and profits will improve as supply more nearly meets demand.

Ignorant Competition

Ignorant competition prevails whenever the pace set by the larger concerns is too fast for the smaller units. As competition becomes intensified there often prevails a disregard of the principle of live and let live. The larger companies reach out after the smaller orders that rightfully belong to the smaller concerns. Such tactics invite retaliation and usually develop the ignorant form of competition.

It is the smaller concerns that serve as the missionaries, working the highways and byways for the smaller orders that are indispensable to an industry. It is these small users, as they become educated, that frequently grow to important customers of the larger units.

The old idea of extermination of the small concerns that used to prevail has been almost entirely abandoned. The institute has been instrumental by means of education in influencing better understandings between the larger and smaller units. An attempt to exterminate smaller competitors might prove successful but a worse crop, even less controllable, would spring up the next day and nothing would be gained. A much better plan is for the larger concerns to rather thesmaller ones under their wings and subject them to helpful education. Leaving the small orders for the smaller concerns, the larger companies would benefit as the smaller units confined their efforts exclusively to business they are better equipped to handle.

This and similar educational activities carried on by the institute is successful in reducing ignorant competition and replacing it with a more considerate and enlightened form of co-operative competition.

As a result prices show an improvement that is reflected in better profits.

As the public becomes acquainted with the institute, its ideals and its purposes, the industry becomes recognized and good will and public support are readily developed. Both the institute and the industry are advanced as the influence and position of the institute becomes established.

Without an institute the industry cannot hope to obtain the recognition that is otherwise possible.

I have been compelled to speak to you in generalities, but you can readily apply them to your specific problems. During the past ten years the industrial institute has proven itself and made its greatest progress. What I claim for this method of insuring business profits is the result of no idle dream but is based upon practical observation and test. Under wise management the institute can effect a cure of most of the competitive problems in business, reduce litigation and lighten the duties of those entrusted with the administration of our laws.

But this work demands the undivided support of each and every unit in the industry. The institute must have a competent staff and it must receive financial as well as the moral support of all members of the industry. We have no system of compulsion in this country. We have no way of compelling a company to co-operate. I sincerely believe it is best for the public at large that such is the case. Our programs, as a consequence, are equitable, tolerant and constructive. The good results are our sanction, and the certain tailism of the efficiency of industrial co-operation.

THE OBSERVER

What He Hears and Sees on His Rounds

Money conditions affecting home ownership have been disclosed in a survey conducted by the Mortgage Bankers Association of America among members in thirty-three states who report as follows concerning first mortgage lending operations in their territories:

The average rate of interest on first mortgage loans on both city and farm properties ranges at present from 5 1/2% to 6%, little variation having been noted throughout the years 1928, 1929 and 1930.

The supply of first mortgage money for new loans is at present adequate to meet the needs of practically all territories with some localities reporting a supply somewhat in excess of normal demands.

A noticeable improvement in the activity of the city and farm real estate market has been noted throughout the year in a number of territories. Very few localities report any appreciable decline in 1930 real estate transactions as compared with 1929.

City and farm real estate occupancy figures show a steady improvement so far in 1930.

A diminishing number of foreclosures and delinquencies reported by banks and mortgage companies indicates that a desirable point of stabilization is being realized.

Berkeley carried off two honors at the recent meeting of the Pacific Coast Building Officials Conference at Long Beach.

Stanley P. Koch, city building inspector of Berkeley, was elected president of the Conference. Honor Number One.

Berkeley was selected as the 1931 Convention City. Honor Number Two.

Northern California benefits in two ways. First a local man was selected to head an organization which is doing constructive work—notably, the Uniform Building Code which is receiving attention in every section of the United States.

Secondly, the 1931 conference will be held just across the bay from where the Conference was organized just nine years ago when "Daddy" Woodruff called to order a handful of men who had a big interest in a small organization in process of formation that today is doing more to benefit the construction industry than any other single unit in the construction field.

The writer attended the organization meeting in the San Francisco City Hall. It was a slow meeting—but—the material was there. Materials, properly assembled, make a Class "A" structure.

It is rather early—but—Welcome to Berkeley in 1931, building officials of the Pacific Coast.

The attention of architects is called by the Common Brick Manufacturers Association to the fact that the third common brick house competition, closes at midnight on November 18. This competition, the brick manufacturers declare, is the easiest that has yet been held. The first prize carries an award of \$500.

The competition will not interfere with the present activities of the architect. The requirementst are merely

a set of floor plans and two photographs of any brick house you may have designed. No special drawings; not even nom de plumes.

The one important requirement is that the walls must show at least 75 per cent of the exterior surface of common brick, and the back-up must be of sound, fire resistive materials. No cinder block or other synthetic composition back-up material will be eligible. Nor will brick veneer over wood.

More than \$100,000,000 in new public building contracts will be let by the Treasury in 1930 in carrying out an expanded building program which the administration planned as an aid to business recovery. In the present calendar year the Treasury has awarded 66 contracts for buildings to cost \$43,000,000 and plans to let 49 additional contracts aggregating \$30,000,000 in the remaining three months of 1930. To this \$73,000,000 must be added the cost of land, which will bring the total above \$100,000,000 this year.

The business bulletin of the LaSalle Extension University (Chicago), looks to the fall months for a little seasonable upward spurt of business in general.

"Business," the bulletin says, "is now holding its ground" in spite of a combination of exaggerated "drought scares" and reports of serious depression effects in foreign countries. Autumn months bring with them the usual seasonal demands for products and services. October, therefore, ought to look better than August and September.

Business leaders are ready to respond, but the public as a whole seems to be holding back—still hesitating somewhat. Encouragement to co-operate is what they need. The path to recovery is well cleared. All along the line there are indications of attempts to encourage general co-operation—sensing what people need and giving it to them at low cost.

TORONTO ON THREE-DAY WEEK RESTRICTS IMMIGRANTS

In Toronto the Bricklayers and Stone Masons Union, the Builders' Exchange and General Contractors Association have agreed to a three-day week with a division of available work among the craftsmen during the period of depression. Another measure to reduce the number of those unemployed is seen in the restriction of immigration. Orders to refuse visas to prospective immigrants likely to become public charges have been issued to all American consuls.

Canadian labor unions have asked the dominion government to place restrictions on immigrant laborers similar to the action taken in the United States. That the federal government has further aided in reducing unemployment is seen in the employment figures on federal aid road projects, which show 35,800 men at work now, compared with 34,500 a year ago—a gain of 4 per cent.

TRADE NOTES

D. C. Westaway, formerly with the Electric Corporation, has joined the sales organization of the Electrical Specialty Co., 1575 Folsom Street, San Francisco.

Andrew H. McCampbell, formerly with the Pioneer Paper Company, is representing the Bancamerica-Blair Corporation on the floor of the San Francisco Builders' Exchange.

Chico Paint & Oil Co. of Chico, operated by J. W. Bish and Paul Edmiston, announce the opening of new quarters at 122 Broadway. The company was formerly located at 330 Main St., Chico.

W. DeP. Tardif, formerly associated with the General Electric Supply Corporation, has joined the northern California sales force of Walker Brothers, manufacturers of electrical construction material, 50 Hawthorne St., San Francisco.

Perry E. Sawyer, well known to Northern California material dealers, has withdrawn from the Allied Rock & Materials Company of Los Angeles and is now operating as the Eclipse Plaster Products Distributing Company with headquarters at 133 East Jefferson St., Los Angeles.

Frank J. Ploch Co., 424 Hayes St., has issued a twelve-page booklet featuring the Ploch Heating Appliances, products that are "safe, sanitary, silent, economical, efficient, long lived and comply with every requirement of all health and fire laws." Appliances featured in the booklet include the Ploch Unit Furnace, Odorless Gas Furnace, Center Draft Coal Furnace, Console Gas Heater and Console Electric Heater. Copies of the booklet will be forwarded on request.

Maydwell & Hartzell, Inc., 158 Eleventh St., San Francisco, and 455 Colyton St., Los Angeles, have been appointed Pacific Coast distributors of the electrical pole line hardware specialties and custom castings manufactured by the St. Louis Malheable Casting Company, St. Louis, Mo. The E. A. Foster Lumber Company, of Seattle, manufacturer of Douglas fir crossarms, has also appointed Maydwell & Hartzell to distribute its product on the Pacific Coast.

NEW ORGANIZATION TO OPPOSE UNFAIR RUSSIAN BUSINESS

An alliance has been formed of the American industries and labor groups that are adversely affected by unfair imports from Russia under the five-year industrialization program which involves reckless selling of Russian products. The new organization, which was preliminarily formed in New York, is called the Joint Conference on Unfair Russian Competition. This organization will serve as a clearing house for information concerning Russian competition in the American market and will disseminate this information and endeavor to secure the co-operation of public authorities in the adoption of and the enforcement of policies that will be protective of American industry and labor against the unfair competition of the nationalized industries of Russia.

USURY ACT AMENDMENT L. A. EXAMINER

(Reprint from Los Angeles Examiner,
October 6)

The California Usury Act is one of the important measures on the statute books.

That act is now being attacked by persons who desire to make enormous profits out of the financial troubles of the poor and needy.

Under the California Usury Act, 12 per cent per year is the limit which can be charged on loans.

The proposed amendment No. 10, which comes before the people of this state at the election next month, would make it possible for the exploiters of the poor man's needs to make a usurious profit of **forty-two per cent** per year!

This pernicious proposal should be turned down so emphatically by the voters that no man would again have the hardihood to advance such a proposal.

Twelve per cent per year is enough, in all conscience, to charge the poor man who must borrow small sums of money to tide over his necessity.

That is one per cent per month. Surely that is enough to satisfy any reasonable lender.

But forty-two per cent—such an outrageous figure makes one understand why the present law is called the Usury Act. It is calculated to prevent usury, and that word denotes one of the most hideous wrongs that one man can do to another in civilized society.

The usurer is one who does not think of others as human—he thinks of them as insects to be led to hideous death in a spider web. Nor does he think of himself as human—he longs to be the spider, who sits in the center of that carefully spun web awaiting his victims.

The State Usury Act brushes away those hideous webs, and keeps them brushed away. The proposed amendment No. 10 would give usurers the chance once more to defile this state's economic life with those vicious webs.

The vast majority of citizens are undoubtedly opposed to this effort to wreck one of the most civilized and necessary laws now on the books of this state. The only possible danger is that citizens will not be warned of the nature of the proposed amendment.

Every citizen who understands how dangerous the amendment is should therefore do his best to bring the matter to the attention of others.

California must not suffer the disgrace of legalizing the robbery of the poor.

U. OF C. ENGINEER TO INSPECT SEPTIC TANKS

H. L. Bolton of the University of California agricultural engineering division has started a survey of septic tanks on California farms. This survey will cover ten counties and is to be finished the latter part of next month.

Septic tanks for sewage disposal have been built on hundreds of farms throughout the state, on plans furnished by the agricultural engineering division through the Agricultural Extension Service. How these tanks have functioned and what service they have rendered will be determined by Bolton in his survey.

The counties Bolton plans to visit include Merced, Los Angeles, Orange, San Bernardino, Fresno, Mendocino, Humboldt, Glenn, Tehama and San Joaquin.

Ontario Lumbermen To Defer Royalties Payment

The payment of provincial dues and bonuses in Ontario for the cutting season 1929-1930 have been partially deferred as a means of alleviating conditions for Ontario Lumbermen, was recently announced by Hon. William Flinlayson, Minister of Lands and Forests, according to a confirmed press report. This information was transmitted by Avery F. Peterson, Assistant Trade Commissioner at Toronto to the Lumber Division of the Department of Commerce.

The offer to lumbermen provides for an option of paying only 50 per cent of the 1929-1930 dues on or before October 30, 1930, the balance to be carried free of interest until April 30, 1931, when 25 per cent of the amount will be due, and to October 31, 1931, when the final payment will be due. The privilege is applicable only to accounts accruing from the cutting of timber during the last season, and is limited to lumbermen who have paid up all accounts prior to 1929-1930.

This announcement follows a petition recently made by a delegation of lumbermen to the effect that unless some adjustment in government taxes was made, woods operations in the coming season will be seriously curtailed, with a consequent reduction in employment.

Variance of opinion is current among lumbermen as to the probable effect of the offer of deferred tax payments. One trade comment estimates a saving of 1 per cent of the cost of production. It is generally conceded, however, that existing conditions in the lumber trade point to reduced logging operations this year, even though woods labor costs are likely to be somewhat less than in previous years.

It is stated in the trade that less winter operations this season would be helpful to the industry in view of the present large inventories and would possibly contribute to an eventual upswing in the prices of both hardwoods and softwoods.

A cablegram from Lynn W. Meekins, Commercial Attache at Ottawa states that lumber stocks are heavy with no immediate market activity expected and lumber cut this winter will likely be far below normal.

ELECTRICAL STANDARDIZATION BY THE BRITISH

Electrical standardization work by the British Engineering Standards Association has been instrumental in improving quality and lowering costs, according to an article in Electrical Industries, London, January, 8, 1930. The article says in part:

"...the increased turnover which has taken place since the war years has been chiefly due to improved methods of handling and costing, and to the extent to which electrical goods have been successfully standardized by the British Electrical Standards Association. Certainly in most branches of manufacture, whether it be generators, motors, transformers, cables, or other accessories, research and standardization have been effectively made use of, which has resulted in improved quality but diminished cost, so that our manufacturers can now hold their own and compete successfully with American and Continental competitors."

LUMBER STRESS COMMITTEE NAMED BY LAMONT

The appointment of a sub-committee on unit working stresses for lumber and timber is announced by Robert P. Lamont, Secretary of Commerce, and Chairman of the National Committee on Wood Utilization. The establishment of this board is a result of a request made by the lumber industry to the National Committee to meet the demand of engineers, architects, builders and others for reliable working stresses.

Members of the sub-committee, all nationally-known engineering authorities, as announced by Secretary Lamont, are as follows: Chairman, F. O. Dufour, consulting engineer, United Engineers and Constructors, Inc., Philadelphia; Morris Brooks, chief, Bureau of Building Inspection, Department of Public Safety, Philadelphia; Clement E. Chase, consulting engineer, Philadelphia; C. C. Cook, maintenance engineer, Baltimore and Ohio Railroad Company, Baltimore. John Foley, assistant purchasing agent, Pennsylvania Railroad, Philadelphia; J. N. Pease, a director of Lockwood Green Engineers, Inc., New York City; G. J. Ray, chief engineer, Delaware, Lackawanna and Western Railroad Company, Hoboken, N. J.; W. A. Slater, director, Fritz Engineering Laboratory, Lehigh University, Bethlehem, Pa., and Morton O. Withey, professor of mechanics, University of Wisconsin, Madison.

According to Axel H. Oxholm, Director of the National Committee on Wood Utilization, this action will afford lumber producers an opportunity to submit to a group representing all branches of the engineering profession for review and approval, such working stresses as are advocated for the different structural grades. Upon presentation of stress recommendations, the sub-committee will examine the supporting data available and will either approve or disapprove the proposed working stresses. Only in cases of approval will its decision be publicly announced.

It was pointed out that it was not to be a function of the sub-committee to set up or recommend working stresses, nor does it have or desire any power to enforce its decisions. It has been established by the National Committee on Wood Utilization for the benefit of the producer and consumer in order to facilitate the economical use of structural lumber and timber, it was explained.

It is the Committee's belief that when the various regional lumber manufacturers' associations reach an agreement among themselves on the subject of stresses covering the different species, if they can in addition obtain the approval of an impartial body, the chance for general acceptance of their working stresses among specifiers and consumers will thereby be much greater and react to the benefit of all concerned. Through this proposed arrangement it is hoped much of the present confusion in regard to timber stresses will be cleared up. It is interesting to note that the steel industry for some time past has had the benefit of such a stress committee, and it is confidently expected that the same benefits will accrue to the lumber industry and lumber consumers.

1930 Revised Edition of San Francisco Building Laws now on sale at office of Daily Pacific Builder; \$1.00 per copy.

ALONG THE LINE

George D. Clark, formerly vice-president of the Mangrum-Holbrook Co., has been elected president of the company to succeed the late Arthur Sherman Mangrum. John A. Peterson, for many years sales manager for the Mangrum-Holbrook interests, has been elected vice-president. The balance of the personnel and heads of the various departments remain the same, company officials announce.

William White, pioneer San Mateo contractor, died suddenly at his home in that city, October 9. Death was due to a heart attack. White had been ill for the past few weeks.

Los Angeles County Building Material Dealers' Association has been reorganized with W. S. Crosby, formerly with the Hammond Lumber Co., as secretary-manager, and headquarters at 401 Union Insurance Bldg., Los Angeles.

Arthur Hateley, senior partner in the firm of Hateley and Hateley, Sacramento plumbers, died in that city October 9, following a brief illness. Hateley was the father of Thomas J. Hateley, junior partner of the business.

Harris J. Ryan, professor of electrical engineering at Stanford University, has been made a member of the Edison Medal Committee of the American Institute of Electrical Engineers.

ELECTRICAL INSPECTORS ELECT
RALPH WILEY, PRESIDENT

Ralph W. Wiley, chief of the Department of Electricity, San Francisco, and chairman of the State Safety Orders Committee, was elected president of the International Association of Electrical Inspectors, Southwestern Section at the closing session of the annual convention in the Hotel Maryland, Los Angeles, last week.

Other officers chosen were: First vice-president, J. M. Evans, Los Angeles; second vice-president, Edward W. McLaughlin, Richmond, Calif.; secretary-treasurer, C. W. Mitchell, San Francisco; members of the executive committee, H. N. Becker, Los Angeles; A. E. Johnstone, San Diego; H. C. Rice, Los Angeles, and W. W. Hicks, San Francisco.

LISTENWALTER & GOUGH SELL
APPLIANCE BUSINESS

Listenwalter and Gough, Inc., has announced the sale of its electrical appliance and radio business in northern California to the Kaemper-Barrett Corporation. W. H. Kaemper was formerly manager of the Listenwalter & Gough's San Francisco office and J. T. Barrett was formerly sales manager. The change became effective Sept. 1.

Listenwalter & Gough will continue in business at the same address, 871 Folsom St., San Francisco, where they specialize in wiring devices and construction material. L. Phillips is manager of the San Francisco office. The firm's headquarters will continue to be maintained at 819 East First St., Los Angeles.

Among the products taken over for distribution by Kaemper-Barrett Corporation are Royal cleaners, Meadows washers and Hammond electric clocks.

PACIFIC COAST BUILDING IN
SEPTEMBER TOTALS \$23,404,467

The following figures, compiled from reports of building department executives, show the building operations undertaken in the Pacific Coast cities during the month of September, 1930, together with the September, 1929, totals for comparison:

CALIFORNIA

City	September, 1930		Sept., 1929
	No.	Cost

EAST BAY ARCHITECT URGES "YES" VOTE ON AMENDMENT TO USURY LAW—BEST ON BALLOT

By A. W. Smith, Architect

Herewith is published the views of Mr. A. W. Smith, Oakland architect, on the proposed amendment to the Usury Law which will appear on the November ballot. Mr. Smith urges that the industry get behind the amendment as "It will result in a better and more responsible set of contractors; will assure an abundance of capital to finance buildings and will eliminate those settlements on a percentage for those who sell materials."

Daily Pacific Builder, in publishing comment, for or against, the proposed legislation, takes no side in the matter. Such comment is published to secure the views of those who have studied the amendment and are in a position to advise on its acceptance or rejection.

We should be pleased to hear from other readers. Space permitting, all comment received will be published.—Editor.

In your issue of October 7 you published an article by O. A. Graybeal on the proposed amendment to the Usury Law.

The stand is taken that the proposed amendment would, in effect, nullify the lien laws of the state; that the material dealers, etc., could not collect on any lien claims except subject to, and secondary to any loans whatever, on property, etc.

Suppose that this amendment carries, then what will be the result? It will be this:

No contractor who has not a satisfactory credit rating will be able to secure material unless (a) The owner or the builder furnishes the material dealer a satisfactory bond to guarantee payment; (b) The real estate is deeded to a trustee as security for the payment of material, etc., which deed must be prior to any building or other loan.

What effect will this have on the building business? It will result in this: The man now doing business on a shoestring will be wiped out. The contractor with capital and experience qualified for \$25,000 job, won't be able to step out and get a \$250,000 job, and then maybe pull through and maybe not.

It will make a legitimate business

of contracting. As it is now, with a lien law to protect the material dealer, a man with \$1,000 can and often does take on \$100,000 contracts. With the lien law umbrella withdrawn, then Mr. Material Dealer will have to be shown where the coin is coming from, and unless he is shown, the contractor will have to give up the job.

If a man is about to enter the drug or the shoe business, or is about to start a furniture factory or any kind of a factory, he must first establish a credit. This is no unmountable hardship, because, under such conditions we have become the greatest merchants and the greatest manufacturers of the world.

The building business is the only business in California in which a man without capital, knowledge, credit or experience can enter. It is the only business where the dealer, in addition to the ordinary protection of business by ordinary laws, has the added protection of a claim against the real estate of some one other than the person to whom he has sold his wares.

What a chaos it would be, if after you had bought a pair of shoes, to find out that the wholesaler who sold the retailer the shoes, had not been paid, and that therefore the wholesaler had a lien against your home. This comparison sounds silly, but it is a parallel example. It is equally silly to give a wholesaler the right of lien to protect him against poor pay. Why should he not be as the wholesale shoe dealer does and first make sure that his customer can pay.

All this lien protection has resulted in an irresponsible bunch of contractors, some scoundrels, some wholly incompetent and the results are that the totals of liens filed in amount the totals of bankrupt liabilities of all other businesses in which goods are handled. Evidently the lien does not give much protection after all.

Let us all get together and put over the proposed amendment. It will result in a better and more responsible set of contractors; It will assure abundance of capital to finance buildings; it will eliminate those settlements on a percentage for our friends who sell material will assuredly take care of themselves before any goods are delivered. Just study over this amendment—it is the best thing on the bal-

ENGINEERING SOCIETIES EMPLOYMENT SERVICE

Further information regarding positions listed in this column is obtainable from Newton D. Cook, Room 715, 57 Post Street, San Francisco. (Phone Sutter 1684).

R-3220-S ENGINEER, college graduate in mechanical, chemical or mining preferred. Must not be over 35 years and with at least five years experience designing and estimating industrial plant equipment. Salary \$250-\$275 month. Permanent. Location Bay Region, and only local applicants can be considered for interview.

R-3216-S RESEARCH CHEMIST, technical graduate with some experience in paint testing, for similar work in industrial laboratory. Salary \$175-\$200. Apply by letter with references and photo. Location, San Francisco.

R-3364-S SALES ENGINEER, electrical graduate preferred, with some ledge of motor application. Small salary to start. Permanent opportunity. Location, San Francisco
W-499-C-S CIVIL ENGINEER, graduate with experience in the design and construction of sewers and water works to purchase an interest in an engineering business. Some experience in electrical engineering desirable. Apply only by letter. Location, Kansas City.

X-7623-C-S. SALES ENGINEER, for the sale of creosoted wood products. This experience desirable but not essential. Apply by letter Headquarters, South. Traveling.

R-3358-S MECHANICAL ENGINEER with considerable experience in the design and manufacture of pressure pumps, to design same for 600 lbs. working pressure. Good opportunity for an experienced designer. Apply by letter. Location, Northern California.

R-3353-S STRUCTURAL DRAFTSMAN, about 30 years old, technical graduate, with experience covering design and layout of steel, concrete and timber structures. Salary depends upon ability. Location, San Francisco.

MAINTENANCE OF MARBLE

A booklet, "Maintenance of Marble" has been published by the National Association of Marble Dealers. The booklet was prepared by D. W. Kessler, Research Associate, of the Bureau of Standards. It contains sections on cleaning treatment for various types of stains, and special treatments such as those for the prevention of stains and for waterproofing. Copies are obtained from the American Standards Association, 29 W-39th St., New York City.

GERMAN BOILER SPECIFICATIONS

The German national standardizing body has issued two books entitled, "Specifications for Materials in the Construction of Stationary Boilers" and "Specifications for Materials in the Construction of Marine Boilers." These books reproduce a number of German standard (DIN) sheets and contain information about boilers. Copies may be purchased through the American Standards Association, 39 W-39th St., New York City.

R. M. FRANDSEN, S. F. ENGINEER, GRANTED PATENT ON STEEL JOIST

R. M. Frandsen, San Francisco structural engineer, has just been granted a patent on a new structural steel joist. The patent, Number 1776-467, is dated September 23, 1930.

Mr. Frandsen, the inventor, calls his joists, "Angle-Tee-Joists." As the name implies, it is made up of commercial shapes—angles, tee bars and flats.

The joists are light trusses, welded together by the spot-weld process. They consist of light and heavy series, in depths of 8", 10", 12", 14" and 16", and range in span widths from 4'6" to 30'6". The light series are designed for a spacing of 24" c-c and a total load capacity of 100 lbs. per sq. ft. of floor area. By means of counterbalancing diagonals the joists are furthermore designed for a variety of imposed extra loading conditions. For example, when all the live load is moved to one side of joists or when two joists are used during construction as supports for support of brick and mortar boards alongside a wall running parallel with joists.

The light series are intended for floor supports in dwellings, office and school buildings, hotels and apartment houses. The heavy series are for garages, stores, etc. A feature of the patent is the end of the joists. This consists of a bent up part of the bottom chord angles until the distance between the backs of the two chords is $2\frac{1}{2}$ " thereafter these angles are extended in a parallel position with a web plate between them, affording a multiplicity of points of support. Other trussed joists have also such an extension; but the interplay of stresses is being more directly, carefully and scientifically cared for in the design of the one single end plate, where other makes are doing the same in a round-about way with two plates, or a truss design. Some joists now in the market (not patented) are dangerously deficient in this respect, Frandsen says.

By using structural angles with the long legs horizontal and the short legs vertical, the Angle-Tee-Joists, the inventor claims, obtain a greater lever arm for the resisting forces than if round bars were used and also acquires greater lateral stiffness.

The manufacturing process is modern. By applying the latest spot-welding machines every weld will be of uniform and reliable strength.

Before proceeding to sell the joists

together the machines will be adjusted so that when the fusing temperature is just right, the electric current will be shut off by the electromechanical control, i. e., the welds will never be heated too little or too much, Frandsen says. They will be just as standardized as the rivets driven by a bull-riveter. The personal judgment of correctness is eliminated.

The cost of welding a joist together, Frandsen claims, is less than half of what it now costs by the arc-welding and puddling of surface edges as

R. M. FRANDSEN

now commonly used. Two men will now be able, by means of the most modern spot-welding machines, to make just as many joists per day as eight men now can weld with the present method.

Mr. Frandsen desires independent manufacturers in every state in the Union for making and placing his new joists. He hopes that by making an improved steel joist for less cost, he will increase the use of structural steel in preference to reinforced concrete or wooden joists. He expects the greatest sale will be in the East, where steel is cheaper and wood more expensive than on the Pacific Coast.

and foresight of the individual engineer. As no two engineers have these qualifications to the same degree, their services are not subject to a specification capable of definite measurement under competitive bidding. Competitive bidding under these circumstances immediately raises the question of the ethical status of the bidder toward his fellow engineers, his prospective client and the interest of the general public.

"When an engineer enters into competitive bidding for engineering services it is almost sure evidence that he is going to bid less than the usual fee charged by him for the services in question, otherwise he would probably not enter the competition, for he knows that the engineer submitting the lowest bid is most likely to get the work. The minute he reduces his fee he is undermining the fee schedule of his fellow engineers. Furthermore, he knows that he cannot afford to give the same degree of service to his client under the fee bid that he would were he getting his usual fee for the work. Consequently, his client will be the loser. The harm does not stop here, but reaches out to the general public. The public is indirectly most vitally interested in the type of engineer selected for public improvement work. It must through taxation raise the funds required to finance the improvement and it is, therefore, interested in seeing that the improvement work is done in the best and most economical manner. If such improvement work is not properly engineered due to a lack of proper compensation for the necessary engineering services, the public will be the loser. From no angle can we see where competitive bidding for engineering services is ethical on the part of the engineer entering into such competition or fair to the general public interested in the improvement to be done.

"It is refreshing indeed to Professional Engineering to know that the Arizona engineers have not yet fitted to repudiate the moral and professional obligations they assumed on entering the profession of engineering."

CANADIAN STANDARDS FOR STRUCTURAL STEEL

A new edition of the "Standard Specifications for Steel Structures for Buildings," published by the Canadian Engineering Standards Association, is now ready for issuance.

Among other changes noted in this second edition of the standard are those which increase permissible unit stresses; and particularly the permissible unit stress for axial tension, which is raised from 16,000 lb. (7.14 tons) per sq. in. to 18,000 lbs. (about 8 tons) per sq. in. Other notable revisions are those in the column formula and for standard allowances for snow load and for wind load on roofs.

Copies of the standard may be purchased through the American Standards Association, 20 W-39th St., New York City.

INCORPORATES

Transit Concrete, Ltd., has filed articles of incorporation with the county clerk in Oakland. Incorporators are: K. L. Kavanagh, L. Callagher, R. Green, M. D. Ehrhardt, A. Hourtane, C. F. Shaw and E. Scammon, all of San Francisco. Capital 5000 shares preferred and 75,000 shares common stock, no par value.

ETHICS VS. COMPETITIVE BIDDING AMONG ENGINEERS

"Of late there has been an increasing tendency on the part of municipal officials, the country over, to call for competitive bids for engineering services on contemplated public improvement work," says Charles J. Ulrich, engineer and lawyer, editorially in the August issue of Professional Engineer, just published.

"The latest call," continues Mr. Ulrich, "for such competitive bidding came from Phoenix, Ariz. It may, however, be said to the credit of Phoenix engineers that they not only discountenanced such a move on the part of the city officials, but also succeeded in convincing them of the unfairness and unethicness of such a procedure with a result, we are informed, that the city officials will select an engineering firm for the work contemplated and pay the usual fee charged by such firm for its en-

gineering services.

"Competitive bidding for engineering services involves the ethics of the profession. Ethics in its broad sense constitutes a code of professional obligations. It is the moral foundation of the profession. It lays down the professional rules of conduct not only as between engineers, but also as between engineers and their clients and between engineers and the general public.

"In competitive bidding for engineering services on public improvement work all three of aforesaid parties are concerned. Strictly speaking, the principle of competitive bidding is possible only under a specification that in bidding is capable of definite measurement. The extent of engineering services rendered on any project depends largely on the training, experience, judgment, initiative

RESTORE PUBLIC CONFIDENCE, SAYS HOOVER'S HOME COMMITTEE

Sound Systems for Making Appraisals—Grading Construction Merit of New Structures—Stabilizing Credit Practices—Adoption of Uniform Lien Law—Introduction of Systems for Conducting Cooperative Promotional Campaigns to Accelerate Sound Construction Projects—Recommendations of Committee.

Restoration of public confidence in home building and buying through the placing of the financing, designing and constructing of homes on a sound and practicable basis is the keynote of a comprehensive program now being considered by President Hoover and the planning committee of the White House Conference on Home Building and Home Ownership, the details of which were made public by A. E. Horst, of Philadelphia, a member of the committee and president of the Associated General Contractors of America.

Mr. Horst, who personally presented the plan two weeks ago at the White House, set forth its details in his report to the executive board of the Associated General Contractors at the opening of its three-day meeting at Rye, N. Y.

The program presented by Mr. Horst outlines definite procedure to accomplish seven different reforms which he claims have long been needed by the entire construction industry and particularly by its residential construction section. His recommendations embrace the establishment of

Sound systems for making appraisals;
Grading the construction merit of new structures;

Examining residences under construction and reporting on the merit of the construction methods;

First and second mortgage financing
Stabilizing credit practices;

Adoption of a uniform lien law;
Introduction of systems for conducting local cooperative promotional campaigns to accelerate sound construction projects.

Members of the planning committee are taking the program under advisement, Mr. Horst told the board, and if found acceptable it is thought probable that a mandate will be issued to joint committees of representatives of all business interests directly concerned and that they will be invited to fight the questions out until detailed plans sanctioned by all groups are devised, and programs for establishing the plans are worked out and put into operation. The chief function of the planning committee, under Mr. Horst's program, would be to see that its recommendations are not pigeon holed or dropped and that the joint committees conscientiously take up their tasks to the end that the reformatory measures may be put into operation.

Taking the first point in his program, Mr. Horst pointed out that the appraisal set on a contemplated building or on one already constructed is the basic factor on which all subsequent financing and construction operations rest. He stated in eleven separate indictments that the present haphazard system of appraisals is unsound, encourages irresponsibility and is a primary factor in preventing first and second mortgage and other construction paper from being acknowledged as the soundest form of security subject to banking discount.

In outlining the ways and means to establish a sound appraisal system, Mr. Horst told the President's planning committee that it could be devised through the cooperation of responsible financial agencies, responsible architects, responsible real estate firms and responsible contractors and builders and that such a system

could be placed in operation on a local, regional and national basis.

He recommended the joint establishment of appraisal and construction inspection bureaus in every city or construction center of the United States; the setting up of high professional standards to govern such bureaus; and the making of their operations independent of the expediences of all groups within the industry. The bureaus would be financed through a moderate fee charged against financing cost instead of the present sometimes exorbitant fees charged for investigation and appraisals, and copies of each appraisal report would be made available to the public upon payment of a nominal fee.

Classes of construction would be standardized under the plan on a basis of excellent, medium and poor specifications and workmanship, and each project would be graded within the class to which it belongs, such as Class A, Class B and Class C. Sound practices could then be developed among financial agencies for making first mortgage loans of high percentages of the bureaus' appraised valuation on structures rated as Class A; for moderate percentages on construction rated as Class B; and for low percentage on Class C projects, Mr. Horst said.

Provision would be made for inspecting projects underway and determining that plans and specifications were not being violated, and allowance would be made for the merit of the design and the performance record of the contractor when establishing the final appraisal valuation, he explained. If, on the other hand, it was found that specifications were being seriously violated and the structure injuriously cheapened, either the classification, appraisal valuation or both could be reduced.

The plan contemplates the development and maintenance of such standards in making appraisals that the bureaus' estimates of value would be above suspicion and would carry the weight of authority with financial agencies, the courts, investors in construction securities and with the home-building and home buying public. Agencies that refused to cooperate with the bureaus would be refused appraisals and rating reports on the projects that they finance, and competition between financial agencies would be confined to their willingness to loan on a greater or less percentage of appraised value, within certain percentage brackets established for the three classes of construction.

It is maintained by Mr. Horst and several members of the executive board of the Associated General Contractors that the establishment of such bureaus would put construction appraisals on a sound basis; would enable the prospective owner or purchaser of a structure to know within narrow limits the merit or demerit of a project; and would serve to straighten out the entire financial tangle that at present tends to put construction paper in the same class as the most spectacular of speculative investments.

The representations for establishing an economical and sound system of second mortgages are based on first setting up a sound procedure for making appraisals and for writing first lien paper. It was contended by Mr.

Horst that the operation of such appraisal and inspection bureaus would make possible the launching of well-financed, skillfully managed second mortgage corporations committed to a policy of rendering service at nominal costs to home owners and builders.

The planning committee was told, Mr. Horst reported, that the present lack of appraisal standards, makes it difficult to distinguish between sound and unsound paper and consequently all secondary paper must bear the brunt of the losses which occur thru the activities of irresponsible elements in the construction industry.

Development of local credit information bureaus now underway by the Associated General Contractors and other groups through the Allied Construction Industries of America will make it possible to supply accurate credit information and data on the personal integrity of all prospective bidders and buyers of constructed buildings and to provide such other specialized credit data as a properly organized second mortgage finance corporation would require, Mr. Horst pointed out.

The Bureau of Contract Information, Inc., a cooperative fact finding body at Washington, is now in a position to furnish information as to the performance records of several thousand contractors and builders and will soon be able to supply reports on the performance records of all contractors and builders in the United States, Mr. Horst said. The credit standing of each individual buyer of construction materials or equipment will be available to the mortgage companies and the credit structure being created will limit delinquencies and serve both second and first mortgage companies in avoiding bad risks.

The necessity for establishing the soundness of construction paper of all kinds so that it can be readily discounted at any bank and be suitable collateral for rediscount through the Federal Reserve System likewise was stressed in recommended procedure looking toward this end. Mr. Horst believes that bankers can not be blamed for their attitude toward construction paper, since the industry has provided no definite procedure for establishing its real worth, but he contends that the support of bankers and other financial agencies would expedite the establishment of a procedure which would supply it with that stability which should be an inherent quality of securities based on collateral of such permanent and essential worth.

With a sound appraisal and inspection system and with a sound credit structure operating within the construction industry, the value of any piece of construction paper ought to be readily ascertainable; should be acceptable at all banks as the soundest type of basic security; and should be provided for in the rediscount provisions of the Federal Reserve System, he said.

The plan also recommends revision of state lien acts in conformity with the principles worked out by the Standard State Mechanics Lien Act Committee of the Department of Commerce, and urges the marshalling of support for the existing provisions of the draft of the proposed uniform lien act as presented to the Conference of Commissioners of Uniform Laws, last August, at Chicago.

The planning committee which is headed by Secretary of Commerce Robert P. La Follette and of which John M. Giles, chief of the division of building and housing, Department of Commerce, is the executive secretary, has been urged, Mr. Horst reported, to investigate all of the recommendations and to work out the details of

ways and means for the launching of these much needed reforms in the construction industry.

The executive board of the Associated General Contractors unanimously approved the program as presented by Mr. Horst at the White House, and will take up for consideration a proposal to create a residence builders section within its organization.

"Reports from various quarters of the city to the Oakland Real Estate Board indicate an increasing demand for housing and floor space and we believe a gradual advance in building activity is now justified," says Fred T. Wood, president of the Oakland Real Estate Board.

"An occupancy survey now being organized will establish actual facts with regard to occupancy.

"It is to be hoped that building will not be undertaken without ample investigation, as it might result in a surplus as did the abnormal activity which culminated in 1926 and from which all builders, realtors and rental property owners have been suffering since. It seems probable that a fairly normal balance between supply and demand in many types of buildings now exists."

An appeal to the national officers of the American Federation of Labor to use their influence to prevent the employment of alien labor in the construction of the works at the Boulder Dam has been made by the Nevada State officers of the organization. The request is signed by George Townsend, president, and Lillie B. Clindinst, secretary of the Nevada Federation of Labor and was telegraphed to William Green, president of the American Federation. It requests the latter to use its efforts to obtain "national legislation to have American citizens only employed on construction work," and says that further employment of foreign labor there should be discontinued.

Replying to the wire of the Nevada Federation President Green said:

"The complaint which you make in your telegram regarding the employment of cheap foreign labor at Boulder Dam will be given our personal attention. We will do everything we can to assist you."

Nevada officers of the federation say that inasmuch as the works will be built by the government the officials of Nevada are powerless to prevent the employment of aliens and that such employment can only be stopped by national legislation.

BIDS ASKED FOR PASADENA MUNICIPAL AUDITORIUM

Bids will be considered by the Pasadena city council on November 24 to erect the proposed civic auditorium and exhibition hall. The cost is estimated at \$1,050,000. Separate bids will be considered on the general contract, plumbing, electrical work, heating and ventilating, elevators, chairs, art work and decorating and an asbestos curtain.

The structure will be of Class A construction, steel frame and concrete, with an auditorium 156 by 250 feet and exhibition hall 115 by 150 feet. Plans provide for concrete slab floors and roof, tile and composition roofing, steel and wood sash and cast stone and plaster exterior.

Associated architects Edwin Bergstrom, Los Angeles, and Bennett & Haskell, Pasadena, prepared the plans.

WILL PROTEST UNLAWFUL IMPORT OF RUSSIAN LUMBER

Although the short selling of wheat by Russian government agency in the Chicago market is the latest evidence of the unrest caused in American industry by Soviet activities, it is learned that the lumber industry is not content with what it considers a failure to enforce existing laws applicable to imports which are in unfair competition with domestic products.

The National Lumber Manufacturers Association is preparing to make a formal request that unlawful imports of lumber be rigidly prohibited in accord with the decree of Congress.

These provisions include Section 307 of the Tariff Act, which excludes the products of convict-labor; Section 363, providing for countervailing duties on imported merchandise which has had the benefit or a direct or indirect bounty or grant from a foreign government; Section 337, which authorizes penalty duties or embargo on articles distributed under unfair competitive methods; the extra, or anti-dumping, duties provision of the tariff laws (Sec. 304 of the act of 1921); and Section 304 of the 1930 act, which requires the marking of imported articles in legible English words with the name of the country of origin.

Wilson Compton, secretary and general manager of the National Lumber Manufacturers Association, has formally submitted to Seymour Lowman, assistant secretary of the treasury, the contention of the American lumber industry that sufficient evidence has already been submitted to "justify the treasury department,

in the absence of authentic counterproof, in regarding all shipments of lumber from the Russian White Sea area as having been produced in part or whole by convict labor."

In a review of the situation to the Board of Directors of the National Lumber Manufacturers Association, Dr. Compton enumerates the specific evidence that has been submitted to the Treasury department in regard to the use of convict labor in North Russian lumber operations in areas from which lumber is being shipped to the United States.

G. D. Whitfield, an English newspaper correspondent testified from personal observation that convict labor is used also in the Vladivostok area. From similar personal observation he testified that the lumber mills in the Archangel district are entirely operated by convicts, except for foreman and superintendents. He says also that convicts are employed in the logging operations. The Treasury department has the statements of a number of sailors who assert that convicts are used to load ships at Archangel, and these statements are endorsed by Whitfield from personal observation. It is further stated that four escaped prisoners now in Norway have reported to Norwegian officials that they were employed in lumbering operations in Russia. Statements have been procured from them through consular sources. There is a considerable amount of other evidence of a miscellaneous nature. Moreover, it is known that the State Department has recently secured important undisclosed information.

FACE BRICK WALLS COST MUCH LESS THAN LIMESTONE

Now that dollars are counting again the cost of very item in building construction is being scrutinized much more closely than was usually the case a year or two ago. This renewed desire to keep the costs down should work out to the advantage of face brick in the field of large buildings, as there is no question of suitability for such construction, and a recent study has shown that in general a limestone facing costs approximately three times as much as one of face brick, says the publication, Permanent Color.

This important saving, plus the growing interest in face brick on account of modern tendencies toward the unusual in color treatment, promises to bring face brick a larger share of facing business.

The comparative cost survey referred to was made in Chicago, and the figures given below apply only to that city, but it is believed that the ratio of three to one applies quite generally between the cost of the standard limestone exterior and one of face brick. This of course applies only to the four-inch facing, as the total wall costs naturally vary less than facing costs alone.

Three competent estimators for large contracting firms submit the following costs per square foot of wall on large buildings faced with brick:

4-in. exterior only (\$30 face brick) No. 1, \$.64%; No. 2, \$.65%; No. 3, \$.64.
12-in. wall (\$30.00 face brick) with common brick backing No. 1, \$1.10; No.

2, \$1.12; No. 3, \$1.08.

The same estimators submit the following cost of erecting walls of large buildings faced with limestone:

4-in. gray select limestone, only, No. 1, \$2.10; No. 2, \$2.67; No. 3, \$2.04.

12-in. wall select gray limestone with common brick backing, No. 1, \$2.72; No. 2, \$2.42; No. 3, \$2.31.

The above estimates include the cost of trim.

It is estimated that the cost of face brick walls, with common brick backing, constitutes from 4 to 4% of the total building cost whereas the wall cost in the same type of building where faced with select gray limestone will be from 8½ to 10 per cent of the total building cost. Cost of windows is taken into account in these figures.

Estimated cost per cubic foot of large buildings faced with face brick and backed with common brick are 60c, 62.5c and 58.3c, respectively, or an average of 60.3c. Estimates of cost per cubic foot of large buildings faced with limestone and with common brick backing are 62c, 65c and 61.7c, respectively, or an average of 62.9c.

Like everything else that moves to market nowadays, face brick must be intelligently and aggressively sold if it is to meet competition. Dealers' salesmen should be familiar with the comparative costs of various materials in place, and copies of the detailed report on this survey will be sent free upon request for salesmen's use.

Plastering Contract Awarded.
APARTMENTS Cost, \$175,000
 SAN FRANCISCO. NE Buena Vista Ave. and Waller St.
 Six-story class C basement and sub-basement apartments (36 two- and three room apts. and one 10-room apartment).
 Owner—Sunacal Investment Company.

Architect—Albert H. Larsen, 447 Sutter Street.
 Contractor—Mission Concrete Co., 270 Turk Street.

Plastering—Chris Berg, 719 45th Ave.
 As previously reported reinforcing steel awarded to W. S. Vetenhall, 17th and Wisconsin Sts.; steel forms to Steelform Contracting Co., Monadnock Bldg.

BONDS

SANTA CRUZ, Santa Cruz Co., Cal.
 Third election held in the Laguna School District to vote bonds of \$8,000 to finance erection of a new school, failed to carry. 38 votes being in favor and 24 against. A two-thirds majority is required. The trustees now contemplate remodeling and adding to the present structure to meet the needs of the district.

ALTURAS, Modoc Co., Cal.—Until Nov. 3 bids will be received by county supervisors for the purchase of the \$2,000 bond issue of the Willow Ranch School District; proceeds of the sale to finance school improvements.

CHURCHES

Plans Being Completed.
CHURCH Cost, \$20,000
 EUREKA, Humboldt Co., Cal.
 One-story redwood church (Colonial type).

Owner—First Methodist Church.
 Architect—Rollin S. Tuttle, Box C, Los Gatos.
 Bids will be taken next week.

Preliminary Plans Being Prepared.
CHURCH Cost, \$6500
 WILLOWS, Glenn Co., Cal.
 One-story frame and stucco church.
 Owner—First Church Christ Scientist Willows.
 Architect—Otto Deichmann, 110 Sutter St., San Francisco.

Plans Being Prepared.
CHURCH Cost, \$25,000
 ROSEVILLE, Placer Co., Cal. Jones and Main Sts.

New church (75x140-ft.; to seat 220).
 Owner—Methodist Episcopal Church, H. W. O'Kane, pastor, 109 Washington St., Roseville.

Architect—Charles D. Dean, California State Life Bldg., Sacramento.
 A drive for funds is now under way. Will contain recreational hall, stage, kitchen and pastor's study.

Plans Being Prepared.
CHURCH Cost, \$60,000 (including \$10,000 for furnishings).
 LINDSAY, Tulare Co., Cal. North Elmwood Street.

Church building.
 Owner—First Baptist Church.
 Private Plans.

Will have Spanish exterior with Gothic-Cathedral interior; L-shape; auditorium to seat 250 exclusive of gallery. An educational unit will also comprise a part of the structure.

FACTORIES AND WAREHOUSES

Sub-Bids Wanted.
ALTERATIONS Cost, \$20,000
 SAN FRANCISCO 2900 Mariposa Ave.
 Alterations and additions to warehouse.
 Owner—Western Paper Stock Co., 2710 16th Street.

Architect—Eng. Dept. of Owner.
 Contractor—Spivock & Spivock, Hobart Bldg.

Sub-bids are wanted on all portions of the work excepting linoleum, which is furnished by owners, and the painting, which will be done by general contractor.

Plans Being Figured—Bids Close Nov. 15, 2:30 P. M.
WAREHOUSE Cost, \$—
 SAN FRANCISCO. Fifteenth and Harrison Streets.

First unit of 2-story reinforced concrete central storage warehouse (flat sla beam construction).

Owner—City and County of San Francisco.

Architect—Dodge Riedy, Pacific Bldg.

Bids are wanted for:
 (a) General contract, estimate cost \$75,000; bond of \$18,750 required of successful bidder. Deposit of \$15 required for plans.

(b) electric work, estimated cost \$7,500; bond \$1,875; deposit for plans \$10.

(c) Plumbing, estimate cost \$4,500; bond \$1,125; deposit for plans \$10.
 Plans are obtainable from the Bureau of Architecture, 2nd floor, City Hall.

Owner Taking Bids.
FACTORY Cost, Approx. \$14,000
 SAUSALITO, Marin Co., Cal.

One-story reinforced concrete boat and motor factory.

Owner—Italian American Motors Co., Inc., 604 Montgomery St., San Francisco.

Plans by McFarland & Moore, 126 Otis St., San Francisco. (Market 5400)

Owner Will Erect By Day's Work.
FACTORY Cost, \$—
 STOCWTON, San Joaquin Co., Cal.

North Wilson Way.

Fireproof factory.
 Owner—La Tournneau Mfg. Co., Moss St., Stockton.

Plans by Eng. Dept. of Owner.
 The La Tournneau Mfg. Co. manufactures road building equipment. Construction will be started within ninety days. The company will employ its own shop forces in construction.

Plans Completed.
ALTERATIONS Cost, \$—
 SAN FRANCISCO. Courtland Ave. and Bradford St.

Remodel building for mattress factory.
 Owner—Rutherford & Hood, 2760 Army St., San Francisco.

Architect—Withheld.
 Contractor—Withheld.

Eids Opened—Held Under Advertisement
FACTORY Cost approx. \$50,000
 SAN FRANCISCO. 11th and Howard Streets.

Three-story and basement reinforced concrete factory.

Owner—Stella Bros., 1470 Howard St.
 Architect—Louis Mastropasqua, 550 Washington St.

Plans Being Figured.
ADDITION Cost, \$25,000
 EMERYVILLE, Alameda Co., Calif.
 Peladeau and Powell Sts.

One-story brick and steel addition to present factory.

Owner—Westinghouse Electric Co. premises.

Plans by Eng. Dept. of Owner.

GARBerville, Humboldt Co., Cal.
 —McCarthy & Johanns, 1363 14th Ave., San Francisco, at \$10,648 submitted low bid to F. W. Haselwood, district engineer, State Highway Commission, Eureka, to erect maintenance station at Garberville, to consist of a superintendent's cottage, office and store house, bunk house, combination woodshed and garage,

gasoline and oil house, septic tank and station sign. Taken under advisement.

IDLEWILD, Del Norte Co., Cal.—Oliver S. Almie, 709 North Fifth St., Grants Pass, Oregon, at \$13,868 submitted low bid to F. W. Haselwood, district engineer, State Highway Commission, Eureka, to erect maintenance station at Idlewild, consisting of a superintendent's cottage, bunk house, truck shed, combination woodshed and garage, gasoline and oil house, septic tank and station sign. Taken under advisement.

Structural Iron Contract Awarded.
INDUSTRIAL BLDG. Cost, \$15,000
 SAN FRANCISCO. SE Fifth and Folsom Streets.

One-story and mezzanine floor reinforced concrete industrial bldg.
 Owner—Louis Lurie, 513 Montgomery St., San Francisco.

Architect—S. Helman, 57 Post St., and O'Brien Bros. & W. D. Peugh, 2015 Montgomery St., S. F.

Contractor—Louis J. Cohn, 1 De Haro St., San Francisco.

Structural Iron—Schradner Iron Wks., 1247 Harrison St., San Francisco

As previously reported, electrical work awarded to W. H. Morgan, 2241 15th St., S. F.; plumbing to Thomas Skelly, 1344 9th Ave.; reinforcing steel and steel sash to Truscon Steel Co., Call Bldg., San Francisco.

Other awards will be made shortly.

Bids Opened.
SHOP BLDG. Cost, \$6000
 BERKELEY, Alameda Co., Cal. Allison Way and West Street.
 Shop building for Corporation Yard.
 Owner—City of Berkeley, Florence E. Turner, city clerk.

Architect—Not Given.
 Following is a complete list of bids:
 George A. Scott, 47 Oakvale, \$11,276
 Chas. D. Vezev & Son, Oakland 11,351
 Connor & Connor, Oakland 11,748
 T. D. Courtright, Oakland 11,850
 F. C. Stoltz, Oakland 11,980
 George Swanstrom, Oakland 12,155
 Thos. F. L. Furlong, Oakland 12,776
 Bids held under advisement.

Construction Under Way By Day's Labor By Owners.
MILL Cost, \$100,000
 FRESNO, Fresno Co., Cal. Industrial section bet. Fresno and Calwa.
 Sulphur mill.
 Owner—Sunland Sulphur Co., 2148 Inyo St., Fresno.

Plans by J. H. Wright, plant superintendent, 2148 Inyo St., Fresno.
 Officers of the company are: T. L. Harper president and principal owner; E. D. Erink, vice-president; B. H. Jones, secretary-treasurer, and J. H. Wright, superintendent and mill manager.

Site Purchased—Plans To Be Prepared.
WAREHOUSE Cost, \$—
 WATSONVILLE, Santa Cruz Co., Cal. Beach Road.
 Warehouse and distributing plant.
 Owner—Western Oil Refining Co. (Jos. L. Castor, Pacific Coast representative, 555 Berry St., S. F.)
 Architect Not Selected.

Bids Opened.
STATION Cost, \$—
 MARIPOSA, Mariposa Co., Cal. At Bear Creek, 9 miles east of Mariposa.

Highway maintenance station, comprising superintendent's cottage; truckshed, blacksmith shop, gasoline and oil house, septic tank, combination wood shed and garage and sewer line.

Owner—State of California.
 Plans by State Department of Public Works.

Following bids were received:
 Irwin & Hopkins, Fresno \$13,200
 Limer & Allen, Merced 13,929
 Biltrite Constr. Co., Berkeley 14,200

ROSEVILLE, Placer Co., Cal.—Following is a complete list of the bids received by the district engineer, Dist. III, State Highway Commission, 502 State Office Building, Sacramento, to erect truck shed and gasoline and oil house at Roseville:

Yoho & Dauker, Sacramento.....	\$3,900

BUSINESS OPPORTUNITIES

Oakland Branch Tractor Division,
Allis-Chalmers Mfg. Co., 4053 Harlan
St., Emeryville, Calif., (Mr. Val
Peterson), desires to contact with
parties or firms familiar with ma-
chine equipment and capable of ren-
dering aggressive representation in
San Francisco. The Division manu-
factures tractors, industrial and agri-
cultural equipment and has national
distribution.

Grobet File Corp. of America, 3
Park Place, New York, N. Y., desires
to secure a manufacturers' agent in
San Francisco for a line of precision
and machinist files. Does not wish to
deal with hardware stores and mill
supply houses, ONLY with manufactur-
ers' agent.

O. W. M. Miller Coal Co., 302 New
England Bldg., Kansas City, Mo.,
offers full or part time sales represen-
tation of your line in local or South-
west territory.

The Whitehead & Hoag Co., New-
ark, N. J. (Mr. W. L. Heath), New-
ark, N. J., desires a man to handle
their line in San Francisco territory,
of high-grade advertising specialties.
R. G. Givson, Blackwell, Oklahoma,
wishes a specialty selling proposition
on commission basis. References, bond
and financial statement will be fur-
nished on request.

H. R. Gillingham Co. (Mr. H. R.
Gillingham), 611 South La Brea Ave.,
Los Angeles, wishes to secure agency
or distributorship for one or more
lines of merchandise on the Pacific
Coast.

P. W. Runyan, Secretary, McSav-
aney Corp., Springfield, Ohio, is in-
terested in contacting with individual
or firm prepared to take up the sale
and distribution of a new type of com-
mercial illuminated display. Arrange-
ments can be made to manufacture
the sign in San Francisco or at
Springfield, Ohio, purchasing the lens
from the home company.

Rough lumber is a manufactured
product and as such would be exempt
from taxation for twelve months if it
remained in the hands of the pro-
ducer, the Attorney General's Office
has advised the tax assessor of Wash-
ington County, Alabama.

The assessor asked, the opinion ex-
plained, whether lumber was subject
to taxation when sawed and stacked
in lumber yards or sheds by the
owner of a sawmill.

Engineering News Section

BRIDGES

SAN DIEGO, Cal.—Plans for the proposed bridge to carry First St. through to Mission Hills have been filed with City Clerk Allen H. Wright. The total estimated cost is \$146,235.51. Thomas J. Allen and R. Robinson Rowe, engineers, prepared the plans. The proposed bridge will be 463 feet 5 inches in length, with a 36-ft. roadway and two 6-ft. walks. The central span is 200 ft. in a three-hinged spandrel braced parabolic arch. Two 80-ft. trusses are on the north side of bridge and one 80-ft. truss and one 20-ft. stringer span on the south. The maximum height of the deck above the lowest point of the canyon is approximately 102 ft. An 8-in. reinforced concrete floor is provided. Plans call for an assessment district. The project has been approved by John C. Shaw, as consulting engineer.

CHICO, Butte Co., Cal.—City council petitioned to construct bridge over Little Chico Creek in Normal Ave. Taken under advisement.

LOS ANGELES, Cal.—Until October 27, 2 P. M., bids will be received by county supervisors to construct reinforced concrete bridge in Pomona Boulevard over Alhambra Wash; will consist of one reinforced concrete arch span, 100 ft. in length and an overall width of 100 ft. Roadway will be 74 ft. wide. Plans on file in office of clerk.

LOS ANGELES COUNTY, Cal.—W. F. Teschke, Hollywood, at \$39,544 awarded contract by State Highway Commission to construct bridge over Alamitos Bay near Long Beach consisting of fifteen 19 ft. timber spans with concrete deck and one 41 ft. 4 in. steel beam removable span.

YUBA CITY, Sutter Co., Cal.—County Grand Jury, in annual report, recommends to the county supervisors the replacement of Mawson bridge, the Tisdale weir bridge and the Butte Slough bridge, with modern structures.

SANTA ANA, Orange Co., Cal.—Until 11 A. M., October 14, bids will be received by county supervisors to construct protection work along Santa Ana River, bet. Chapman Ave. bridge and the Santa Fe Ry. bridge, west of the city of Orange, involving iron pipe posts with Elwood wire fencing and earth dyke. Estimated cost \$18,000, including pipe furnished by the county. Nat H. Neff, county road commissioner.

PLACERVILLE, El Dorado Co., Cal.—Until November 5, 2 P. M., bids will be received by Arthur J. Koletzke, county clerk, to construct reinforced concrete culvert over Brandon Creek near Latrobe and for a reinforced concrete girder bridge over Travers Creek, near Spanish Flat. Separate bids are wanted for each structure. Certified check 10% payable to clerk required with bid. Plans obtainable from county surveyor on deposit of \$10, returnable.

SAN LUIS OBISPO, Cal.—William Lane, Paso Robles, submitted low bid

to State Highway Commission at \$4998 to construct a timber bridge consisting of six 19-ft. spans and two 18-ft. spans on pile bents to bridge a gap in the existing structure across the Santa Maria River.

SOLANO Co., Cal.—Following bids received October 15 by State Highway Commission to widen to a clear roadway width of 28 feet, five concrete bridges between Vacaville and Dixon: G. J. Uulrich Const. Co., Modesto \$11,462
P. F. Bender, North Sacto. 12,614
Ralph Hunter, Sacramento. 18,413
Bids held under advisement.

DREDGING, HARBOR WORKS & EXCAVATIONS

SAN DIEGO, Cal.—Robt. T. Dawson, San Diego, at \$14,951 awarded contract by Bureau of Yards & Docks, Navy Department, Washington, D. C., to construct quay wall at Naval Base.

STOCKTON, San Joaquin Co., Cal.—Until October 20, 3 P. M., under Proposal No. 31-96, Specifications No. 2505, bids will be received by U. S. Engineer Office, California Fruit Bldg., Sacramento, for clearing brush and trees from the area of Item 316, along the west bank of the San Joaquin river, on McDonald tract, between Spud Island and McDonald ramp, a distance of about 12 miles below Stockton. Specifications obtainable from above.

SACRAMENTO, Cal.—Until October 29, 3 P. M., under Circular Proposal No. 31-97, Specifications No. 2470, bids will be received by U. S. Engineer Office, California Fruit Bldg., for raising existing levee along the westerly side of Yolo By-Pass, beginning at a point about 0.9 mile southeasterly of "Yolano" station on the Sacramento Northern Railroad, and extending to the Pump House at the southeast corner of Reclamation District No. 2068. Plans obtainable from above.

MARYSVILLE, Yuba Co., Cal.—Hemstreet & Bell, Marysville, sublets contract to LeTourneau Manufacturing Co., 122 Moss Ave., Stockton, to construct 8700 lin. ft. levee on the Feather river. (This work for U. S. Engineer Office, California Fruit Bldg., Sacramento).

LOS ANGELES, Cal.—Plans are being prepared in the office of the United States District Engineer, 751 S. Figueroa St., for the construction of a concrete caisson type extension to the present breakwater between Los Angeles and Long Beach harbor.

Plans call for the erection of concrete boxes, 100 feet long, 50 to 60 feet high, and 35 feet wide at the top sloping up from a 60-foot base. These receptacles will be filled with rock, sand, and clay, and sunk to the bottom. A superstructure will be constructed on top to permit the jetty to protrude fourteen feet from the mean low tide line. It will take approximately 125 of the caissons to form the entire 12,500-foot extension.

RICHMOND, Contra Costa Co., Cal.—Until November 13, 3 P. M., bids will be received by U. S. Engineer Office, Customhouse, San Francisco, for furnishing sand for making fill in Richmond Harbor. Project involves approximately 195,000 cu. yds. fill. Specifications obtainable from above office.

HALF MOON BAY, San Mateo Co., Calif.—Tentative sketches were submitted at a meeting of the Coastside Civic Union at Half Moon Bay last Tuesday night for the proposed shipping and yacht harbor project for Half Moon Bay. R. Guy Smith, secretary of the organization, presented Government charts and data calling for a breakwater and other improvements in a bay space for shipping of 640 acres with an average depth of 35 ft., the total cost of the work being placed at \$2,000,000.

RICHMOND, Contra Costa Co., Cal.—Until November 13, 3 P. M., bids will be received by U. S. Engineer Office, Customhouse, San Francisco, for dredging in Richmond Harbor. Project involves approximately 94,340 cu. yds. Specifications obtainable from above office.

OAKLAND, Cal.—American Dredging Co., 255 California St., San Francisco, at \$445 cu. yd. submitted low bid to City Port Commission for clam shell dredging fronting the Ninth Ave. Pier. Pacific Coast Dredging Co., at \$4625 cu. yd., only other bidder. Taken under advisement.

IRRIGATION PROJECTS

PARADISE, Butte Co., Calif.—Until November 4, 10 A. M., bids will be received by J. E. Alley, secretary, Paradise Irrigation District, for the following work, to be let as one contract or in part:

- Item (1) furnishing:
 - 80 ft. 30-in. 10-gauge riveted steel slip-joint pipe;
 - 40 bbls. Portland cement;
 - 20 cu. yds. sand, 40 cu. yds. gravel;
 - 220 ft. 4-inch standard screw-joint pipe;
 - 1 30-in. P. Heavy-Duty Gate, Calco Model or similar, pedestal lift rod;
 - 5,000 lb. b.m. dimension lumber
- Item (2) haul all materials from Magalia station to the job.
- Item (3) damming water from tunnel, installing 30-in. pipe, wading 30-in. gate to pipe, filling tunnel with conc. over pipe and balance with loose rock, construct bulkhead, intake and screen support, etc.
- Item (4) building operating trestle and installing pedestal lift

STREET LIGHTING SYSTEMS

SANTA ANA, Orange Co., Cal.—City council declares intention (2235) to install lighting system in Flower St., bet. Santa Clara Ave. and 1150 ft. north, and portions of other streets, involving King Feronite standards, walks, repairs to curbs, walks, culverts, and pavements. 1911 and 1915 Acts. Protest hearing Oct. 13. E. L. Vegely, city clerk.

ALAMEDA, Alameda Co., Cal.—Proceedings have been started by the city council to widen Central Ave., an additional 8 ft. and install new electric lights with an underground system. Property owners petitioned for the work. The type of lighting standard has not been selected but a two-light standard conforming in design to those in the north end of Webster street as suggested. Burnett Hamilton is city engineer.

ALHAMBRA, Orange Co., Cal.—Osborn Co., 455 California Terrace, Pasadena, awarded contract by the city commission at \$15,991 to install ornamental lighting system with posts, conduits, wires, etc., in San Marino Ave., from Sixth St. to Garfield Ave., etc.

LONG BEACH, Cal.—Proceedings will be started by city shortly for an ornamental lighting system in Long Beach Blvd., between Bixby Rd. and 48th St., involving 77 standards.

MACHINERY AND EQUIPMENT

WHITTIER, Los Angeles Co., Cal.—Western Enterprise Engine Co., 1000 Alhambra Ave., Whittier, at \$21,925 awarded contract by city council to furnish five 120-h. p. gas engines, with pulleys, mufflers, idlers, etc.

OAKLAND, Cal.—Guy K. Harrington, 2841 Castro Way, Sacramento, at \$643 submitted only bid to city council to furnish and deliver one traffic-line marking machine for City Street Department. Taken under advisement.

PHOENIX, Ariz.—Until October 27, 2 P. M., bids will be received by John B. Brown, superintendent, U. S. Indian Field Service, to furnish f. o. b. shipping point specified by bidder or f. o. b. Phoenix, Arizona, one new latest improved model lightweight auto truck, ½-ton capacity, with open cab for driver, permanently equipped with steel "pick-up" body, 60-in. long, 10-in. in depth, together with tires, tools, etc. Delivery to be made 15 days after award of contract.

STRATFORD, Kings Co., Cal.—Until October 27, 8 P. M., bids will be received by E. B. Hoey, clerk, Stratford Union Elementary School District, to furnish and deliver one school bus completely equipped with capacity of 40 to 46 pupils, ages between 6 and 16 years; total cost not to exceed \$2700. Allowance to be made for 1924 T model Ford school bus, capacity 20 to 25 pupils, no longer required by the district. Further information obtainable from clerk.

PASADENA, Los Angeles Co., Cal.—Judson-Pacific Co., 60 Mission St., San Francisco, submitted low bid to the city directors to furnish electrically operated crane. Bids were taken on (1) delivered and installed, (2) without installation:

Judson-Pacific Co.—(1) \$22,300; (2) \$20,950.

Consolidated Steel Corp.—(1) \$22,510; (2) \$21,540.

Harnischfeger Corp'tion—(1) \$22,510; (2) \$21,950.

Cleveland Crane Co.—(1) \$23,338; (2) \$22,588.

Bedford Foundry—(1) \$24,400; (2) \$23,200.

Herbert's Machinery Corp.—(1) \$24,450; (2) \$23,650.

Taken under advisement.

BEVERLY HILLS, Los Angeles Co., Cal.—Until 8 P. M., Nov. 5, bids will be received by the city council for one police ambulance. B. J. Firminger, city clerk.

COALINGA, Fresno Co., Cal.—Until October 27, 7:30 P. M., bids will be received by F. J. McCollum, secretary, Coalinga Union High School District, to furnish one 5-passenger school bus for transportation of pupils; motor to be not less than six nor more than eight cylinders, and the price not to exceed \$1800. Certified check or bidder's bond in total amount bid required. Further information obtainable from secretary.

LONG BEACH, Cal.—Gardner-Denver Co., 939 Santa Fe Ave., Los Angeles, submitted low bid to city manager at \$1425 to furnish one portable air compressor; spec. C-489 Alt. 1, \$1395 less running gear, fender, tool boxes, etc.

SAN FRANCISCO — Until October 27, 3 P. M., under Proposal No. 651, bids will be received by Leonard S. Leavy, city purchasing agent, 270 City Hall, to furnish and deliver one concrete mixer for Department of Public Works. Specifications obtainable from above.

RAILROADS

SAN FRANCISCO—The Western Pacific Railroad Co. authorized by the bonds to be sold to the highest bidder interstate commerce commission to issue \$5,000,000 of first mortgage 5% at not less than 97.5% of par and accrued interest. Proceeds will be used for construction purposes.

FIRE EQUIPMENT

BEVERLY HILLS, Los Angeles Co., Cal.—Until 8 P. M., Nov. 5, bids will be received by the city council for

furnishing one booster pump and hydro-pressure tank. B. J. Firminger, city clerk.

VENTURA, Ventura Co., Cal.—The city council will probably authorize the purchase of a 1000-gallon fire engine pumper as equipment for the new suburban fire station located in the east part of the city.

RESERVOIRS AND DAMS

LAKEPORT, Lake Co., Calif.—As previously reported, Smith Bros. Co., Eureka, at \$2,932 awarded contract by city council to construct reinforced concrete reservoir (excavation completed) in connection with municipal water system. Following is complete list of bids received:

Smith Bros. Co., Eureka.....	\$2,932
F. R. Phillips, Lakeport.....	3,066
N. Peach, Lakeport.....	3,140
Petaluma Const. Co.....	3,150
C. H. Gildersleeve, Felton.....	3,650
P. L. Burr, San Francisco.....	2,869

Reservoir will be circular type, 70-ft. diameter, 12-ft. deep, with capacity of 336,500 gallons.

PLACERVILLE, El Dorado Co., Cal.—Until November 5, 2:30 P. M., bids will be received by R. W. Browne, secretary, El Dorado Irrigation District, 685 Main St., for clearing Webster Creek Reservoir Site. Plans obtainable from secretary on deposit of \$5, returnable.

PIPE LINES, WELLS, ETC.

VENTURA, Ventura County, Cal.—Southern California Gas Co., 950 South Broadway, Los Angeles, will let contract shortly to construct 5½ miles of gas main from the company's compressor plant in Ventura Ave. to join with the present 12-inch main running through the city. Total estimated cost, \$100,000.

ORLAND, Glenn Co., Cal.—Natural Gas Corp., a subsidiary of the Standard Oil Co., will expend \$60,000 in the construction of a gas plant and installation of distributing mains. Franchise has already been granted by the city council.

SEWERS AND SEWAGE DISPOSAL PLANTS

HILLSBOROUGH, San Mateo Co., Cal.—City council has authorized formation of a district to handle drainage of storm waters from Brewer Tract No. 2 into Bromfield and Fulton Roads, Hillsborough; estimated cost, \$9,000.

GILROY, Santa Clara Co., Cal.—City council orders extension of sewer system west of Hamlin and First Sts., a distance of several hundred feet.

SAN FRANCISCO—Until October 29 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to construct Army St. sewer between Pennsylvania Ave. and Mississippi Sts.; estimated cost, \$15,000. Project involves:

- 363 lin. ft. 2-ft. 6-in. x 3-ft. 9-in. reinforced concrete sewer;
- 464 lin. ft. 2-ft. 6-in. x 3-ft. 9-in. reinforced concrete sewer exclusive of piles;
- 827 lin. ft. 6-in. V. C. P. under-drain covered with concrete or embedded in broken rock;
- 1 reinforced concrete special struc. exclusive of piles;
- 2 brick or concrete manholes;
- 1,300 lin. ft. wood piles, below cut-off in place.

Certified check 10% payable to clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall, on deposit of \$10, returnable.

RIVERSIDE, Riverside Co., Calif.—Until Oct. 21, bids will be received by the city council to construct storm drain from the Riverside Water Co.'s canal to Tequesquite Arroyo. Est. cost, \$20,000. Bid will range from 36-in. to 54-in. R. E. Brown, city engineer.

NEWPORT, Orange Co., Cal.—Currie Eng. Co. has completed a preliminary survey and has announced the probable cost for a sewage disposal system for Newport and Balboa. The work, which would be carried out under the Mattoon Act, is estimated to cost \$185,000.

WESTMORELAND, Imperial Co., Cal.—Until 7:30 P. M., October 23, new bids will be received by the Westmoreland Sanitary District to construct Inhoff Tank and Main outfall sewer, in accordance with plans which may be obtained from the Currie Engineering Co., 219 Anderson Bldg., San Bernardino, on deposit of \$5 of which \$2.50 is returnable. The approximate quantities are:

- (1) Inhoff tank;
- (2) 3000 ft. 12-in. vit. sewer.

O. U. Miracle of San Diego was previous low bidder at \$13,966 (Sept. 4) but failed to sign the contract after award had been made to him.

MOUNT VERNON, Wash.—Joe Colucia, 1425 Hanford St., Seattle, at \$92,840 submitted low bid to the city council for approx 4 miles of clay pipe sewers, including pump houses, sewer pumps, manholes and catch-basins. Sam Macri, 511 21st Ave. North, Seattle, at \$92,727 low on concrete pipe. Bids taken under advisement. C. E. Orisy, engineer, Republic Bldg., Seattle.

WATER WORKS

UKIAH, Mendocino Co., Cal.—Until October 22, 8 P. M., bids will be received by Fred L. Bosworth, city clerk, to furnish and deliver: Two 4-in. No. 400 Screwed gate valves;

Three single wharf hydrants, 4-inch pipe inlet with 2½-inch Pacific Coast thread outlet with caps and chains and with nuts instead of wheels;

Four 4-in. black mall, tees—dipped; Three 4-inch black mall elbows—dipped; 1600 feet 4-inch National Standard Black Dipped Pipe;

Two 4-in. nipples dipped;

Two 2x4 bushing;

Twenty-four saddles to fit 4-inch pipe tapped for ¾-inch outlet;

One saddle to fit 4-inch pipe tapped for 2-inch outlet;

Two bundles ¾-inch black dipped National Pipe;

250 ft. 2-inch black dipped National Pipe.

Certified check 10% payable to city required with bid.

TERRA BELLA, Tulare Co., Cal.—Universal Air Brush Co. at \$653c ft. (\$11,000) awarded contract by Terra Bella Irrigation District to clean and paint main pipe line between Valley Station and the main pumping station north of Terra Bella, a distance of approx. 4 miles; also at \$430 to clean and paint steel reservoir at Station No. 4.

DENVER, Colo.—Pacific States Cast Iron Pipe Co. submitted lowest regular bid to the U. S. Bureau of Reclamation at \$2173.92 and will be awarded the contract for furnishing of cast iron pipe and fittings for a water pipe line to be installed at Coalville, Utah, involving:

- (a) 1566 ft. 8-in. inside diameter cast iron bell and spigot pipe;
- (b) 8-in. inside diameter cast iron bell and spigot pipe bends as follows:

- 2 2½ degree
- 4 1½ degree
- (c) 1 8-in. flanged wedged gate valve, rising stem, bronze mounted, faced and drilled, for 125 lbs. water pressure with 2-ring gaskets and 2 sets flanged bolts.
- (d) 1 8-in. flanged fish-trap, Trident or equal, with 1 ring gasket and 1 set flange bolts;
- (e) 2 8-in. diameter x 20-in. length cast iron pipe, one end with standard A. S. M. E. flange, faced and drilled, one end with spigot;
- (f) 2 8-in. inside diameter cast iron adapters, one bell end to fit 8-in. C. I. bell and spigot pipe, one end to fit 8-in. inside diameter wood stave pipe.

The other bids were: American Cast Iron Pipe Co., \$1632.87 f. o. b. Birmingham, Ala.; Crane O'Fallon Co., \$1693.26, pipe and fittings f. o. b. Birmingham; valves, etc. f. o. b. Chicago; National Cast Iron Pipe Co., \$2352 f. o. b. Coalville, Utah.

SAN JOSE, Santa Clara Co., Cal.—Hearing on the petition seeking reclamation of Santa Clara County Waterworks District No. 1 (near Palo Alto), will be considered by the Board of Supervisors on November 3. After formation the district proposes to vote bonds of \$30,630 to finance construction of a domestic water distributing system.

WILLOWS, Glenn Co., Cal.—State Reclamation Board has completed purchase of land for the Moulton weir in the Sacramento river, 8 miles above Colusa and construction is expected to be started January 1. The weir, to be financed jointly by the Federal and State governments, will become part of the Sutter By-Pass project and, with flowage rights, will cost about \$600,000.

RED BLUFF, Tehama Co., Calif.—Pacific States C. I. Pipe Co., 111 Sutter St., San Francisco, at \$18 ft., awarded contract by city council to furnish 1,000 ft. 4-in. c. i. pipe, class 100. Bid also submitted by C. Clausen Co., Grinnell Co. of the Pacific, American C. I. Pipe Co., all of San Francisco, and Crane Co. of Sacramento.

EUREKA, Humboldt Co., Cal.—John Griffith, city superintendent of public works, will ask bids at once to furnish 1,800-ft. of 16-in. cast iron pipe for water department.

SAN MATEO, San Mateo Co., Cal.—Until October 20, 8 P. M., bids will be received by E. W. Foster, City Clerk, to construct pumping plant in San Mateo City Park. Certified check 10% required with bid. Plans on file in office of clerk.

MILBRAE, San Mateo Co., Cal.—Election will be held shortly in Milbrae Utility District to vote bonds of \$6000 to finance construction of water system. Geo. A. Kneese, Courthouse, Redwood City, engineer for district.

EUREKA, Humboldt Co., Cal.—Mercer-Fraser Co., Eureka, at \$16,000 awarded contract by Pacific Gas & Electric Co., 245 Market St., San Francisco, to construct extension to salt water intake in the south line of Whipple street west of Railroad Avenue.

SAN FRANCISCO—Until October 20 3 P. M., under Proposal No. 648, bids will be received by Leonard S. Leavy, city purchasing agent, 270 City Hall, to furnish standard weight galvanized steel pipe for the Municipal Water Department; pipe to be made in the U. S. A., treated and coupled for mill shipment in random lengths, f.o.b. 639 Bryant St., San Francisco as follows:

- 15,000 feet ¾-inch.
- 2,000 feet 1-inch.
- 15,000 feet 2-inch.

Specifications obtainable from city purchasing agent.

BEVERLY HILLS, Los Angeles Co., Cal.—Until 8 P. M., Nov. 5, bids will be received by the city council for 6320 ft. 3-in., 4-in. and 6-in. water mains. Salisbury, Bradshaw & Taylor consulting engineers.

EUREKA, Humboldt Co., Cal.—Until October 21, 8 P. M., bids will be received by John Griffith, city superintendent of public works, to furnish 1,800 lineal feet of 16-inch class B cast iron water pipe or its equal with bell and spigot joint, f.o.b. wharf, Eureka, delivery to be made not sooner than 5 days after no more than 60 days after award of contract.

CHANDLER, Ariz.—Election will be held October 27 in South Chandler Water Conservation District to vote bonds of \$480,000 to finance water system improvements. W. C. Adams, secretary of district.

SAN FRANCISCO—American Cast Iron Pipe Co., Balboa Bldg., at \$1.298 lin. ft. awarded contract by City Purchasing Agent to furnish and deliver 2,500-ft. 12-in. cast iron pipe for Water Department; to be centrifugally cast iron pipe, bell and spigot type in 16-ft. lengths, Class 150, tar-coated.

PLAYGROUNDS & PARKS

BEVERLY HILLS, Los Angeles Co., Cal.—Until 8 P. M., Nov. 5, bids will be received by the city council for landscape work in the city park. B. J. Firminger, city clerk.

COLUSA, Colusa Co., Cal.—Chamber of Commerce has started movement to secure lands occupied by the old high school in the east residential section of the city on which it is proposed to establish a municipal park. L. E. Starkweather, president of the Colusa Rotary Club is in charge of the move.

STREETS AND HIGHWAYS

SEBASTOPOL, Sonoma Co., Cal.—City Council declares intention (1935-A) to improve one block of Burnett St., involving grading; 5-inch concrete pavement; concrete curbs. 1911 Act. Bond Act 1915. Hearing Nov. 3. F. G. McFarlane, city clerk.

SAN FRANCISCO.—Bureau of Engineering, Department of Public Works, 3rd floor, City Hall, completes specifications to improve crossing of Oxford and Silliman Sts.; estimated cost \$1660. Project involves:

- 63 lin. ft. armored concrete curb;
- 3 brick catchbasins, complete;
- 90 lin. ft. 10-in. V. C. P. culverts;
- 284 sq. ft. 1-course conc. sidewalks;
- 3,286 sq. ft. asph. conc. pave., 2-inch asph. conc. surface with 6-in. class F concrete base.

MENLO PARK, San Mateo Co., Cal.—Until October 21, 8 P. M., bids will be received by Fannie L. Kurtz, city clerk, (30-2) to improve Hoover St., for its entire length and Oak Grove Ave., from point 45 ft. s. w. of Hoover St. to pt. 45 ft. s. e., and Valparaiso Ave. from pt. 45 ft. s. w. of Hoover St. to pt. 45 ft. n. e., involving grading; cem. conc. curbs and walks; part circle galv. iron culverts; 4-in. water-bound rock macadam base pavement with 1½-inch Colas surface; vit. salt glazed pipe sewer laterals. 1911 Act. Bond Act 1915. Certified check 10% payable to city required with bid. Plans on file in office of clerk.

MONTREY, Monterey Co., Cal.—City Council declares intention (3023) to construct cement concrete sidewalks in portions of Pacific St., between Martin and Decatur Sts. 1911 Act. Bond Act 1915. Hearing Oct. 28. Clyde A. Dorsey, city clerk.

SAN FRANCISCO.—Bureau of Engineering, Department of Public Works, 3rd floor, City Hall, completes specifications to improve De Haro Street bet. Alameda and Division Sts.; estimated cost \$6350. Project involves:

- 630 lin. ft. armored concrete curb;
- 150 lin. ft. V. C. P. side sewers;
- 50 lin. ft. 10-in. V. C. P. culvert;
- 2 brick catchbasins;
- 17,450 sq. ft. asph. conc. pavement, 2-in. asph. conc. surface, 6-in. class F concrete base.

KERN COUNTY, Cal.—As previously reported, bids will be received Nov. 5, by State Highway Commission to grade and pave with cement concrete, 0.2 mile near Wasco. Project involves:

- (1) 18,950 cu. yds. rdwy. excav. without class;
- (2) 210 cu. yds. struc. excavation;
- (3) 3000 sq. yds. subgrade for pave.;
- (4) 610 cu. yds. class A Portland cement concrete (pavement).
- (5) 10 cu. yds. class A Portland cement concrete (structures).
- (6) 15,00 lbs. bar reinf. steel (pavement and structures).
- (7) 27 lin. ft. 12-in. std. reinf. conc. pipe;
- (8) 32 lin. ft. 18-in. do.;
- (9) 61 lin. ft. 36-in. do.;
- (10) 60 lin. ft. part circle corr. metal culvert;
- (11) 370 tons crushed gravel or stone (borders);
- (12) 85 bbls. fuel oil (borders);
- (13) 50 cu. yds. remove and dispose of existing pavement;
- (14) 0.5 mi., move and reset property fences;
- (15) 520 lin. ft. laminated timber guard rail;
- (16) 13 stations finishing roadway;
- (17) 10 each, monuments, complete in place.

The State will furnish part circle corru. metal culvert and cast steel frames and covers for drop inlets.

CRESCENT CITY, Del Norte Co., Cal.—Pacific States Construction Co., Call Bldg., San Francisco, awarded contract by county supervisors to rock and oil highway up the coast from Fifth and Wendel streets to Pacific Ave., and thence down Pacific Ave. to connect with H street, a block above the high school; rock on road, \$2.45; grading, \$300, lump sum; Bitumuls application, 28½¢ yd.; header boards, 5¢ lin. ft.

SANTA CRUZ, Santa Cruz Co., Cal.—County supervisors declare intention to improve Palm Ave. from Lake Ave. to Watsonville city limits, including crossings, involving asphaltic macadam surface on 4-in. waterbound macadam base, cement concrete curbs and gutters. County Improvement Act 1921. Bond Act 1915. County will pay \$2,000 of cost from Pajaro Road Section 1 fund. Hearing November 7. H. E. Miller, county clerk. Lloyd Bowman, county surveyor.

SAN FRANCISCO.—Until October 29 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve:

Alameda St. bet. Potrero Ave. and York St. and west line of York Street including intersection of Hampshire St., involving grading. Est. cost, \$7,200.

Crossing of Kirkwood Avenue and Mendall St., involving grading, armored conc. curbs, one-course cement sidewalks, brick catchbasins, 2-inch asph. conc. pave. with 6-in. class F conc. base. Est. cost, \$2,000.

Crossing of Delano Ave. and Mount Vernon Ave., involving armored conc.

curbs, two-course cement conc. sidewalks; 8-in. and 12-in. vit. clay pipe sewers, brick manholes, brick catchbasins, 2-in. asph. conc. pave. on 6-in. class F conc. base.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

SAN FRANCISCO.—Until October 29 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve:

North half of Green St. from point 62-ft. 7-in. from east line of Polk St. to point 87-ft. 6-in. east of Polk St., involving removal of sand from roadway and sidewalk and construction of bulkhead. Est. cost \$400.

Uncompleted portions of 26th Ave. bet. Ortega and Pacheco Sts.; 41st Ave. bet. Noriega and Ortega Sts., etc., involving armored concrete curbs, side sewers, 6-in. conc. base pavement with 1½-in. asph. conc. surface. Est. cost, \$6,000.

44th Ave. bet. Moraga and Noriega Sts. (where not) involving armored concrete curbs, vit. clay pipe sewers, 2-in. asph. conc. surface with 6-in. class F concrete base. Est. cost \$1600. Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

SAN FRANCISCO.—Until October 29 2:30 P. M., bids will be received by S. J. Hester, secretary, Board of Public Works, to improve:

Cayuga Ave. from Onedia Ave. to Seneca Ave., and Seneca Ave. from Onedia Ave. to Alameda Blvd., etc., involving grading, armored concrete curbs, 1-course concrete sidewalks, 8-in. and 12-in. vitrified clay pipe sewers, side sewers, brick catchbasins, 2-in. asph. conc. surface pavement on 6-in. class F concrete base. Est. cost \$26,000.

Portions of Saturn St., 15th St. Ordway, etc., involving construction of artificial stone sidewalks. Est. cost \$800.

Certified check 10% payable to Clerk of the Board of Supervisors required with bid. Plans obtainable from Bureau of Engineering, 3rd floor, City Hall.

COLUSA COUNTY, Cal.—George McDaniel, Marysville, at \$743 awarded contract by State Highway Commission to construct 9 miles of property fence on state highway between Bear Creek and 8 miles west of Williams.

KERN COUNTY, Cal.—Until November 5, 2 P. M., bids will be received by State Highway Commission to grade and pave with Portland cement concrete, 0.2 mile near Wasco.

See call for bids under official proposal section in this issue.

HILLSBOROUGH, San Mateo Co., Cal.—City council has ordered bids called to pave Arden Road and roads in Brewer Tract No. 3.

HILLSBOROUGH, San Mateo Co., Cal.—H. E. Casey Co., B. St., and Third Ave., San Mateo, at \$12,550 submitted low bid to city council to widen shoulders of Crystal Springs road within city limits. San Mateo Feed & Fuel Co. only other bidder at \$1507. Taken under advisement.

HILLSBOROUGH, San Mateo Co., Cal.—McCarthy Co., San Mateo, at \$580.50 submitted low bid to city council to repair Forest View Road. C. L. Jordan at \$666.50, only other bidder. Taken under advisement.

ALAMEDA, Alameda Co., Cal.—City has started proceedings to widen Central Ave., by an additional 8 ft. involving construction of curbs, gutters and replacement of pavement. Burnett Hamilton is city engineer.

grade and shoulders, 1450 cu. yds. selected borrow excavation in place; 99 lin. ft. remove corr. metal pipe culverts; 22,600 cu. yds. crushed rock or crushed gravel surface in place; 400 cu. yds. crushed rock or crushed gravel in stockpile; 6 cu. yds. class A and 58 cu. yds. class B conc.; install 892 lin. ft. 18-in., 754 lin. ft. 24-in., 90 lin. ft. 30-in. and 226 lin. ft. 36-in. corr. metal pipe; 34 monuments; lump sum, remove rubbish from right of way; 5621 lin. ft. construct fence; 2436 lin. ft. remove fence; 2 furnish and install posts or Federal aid markers. State will furnish corr. metal pipe culverts and hand couplings f.o.b. cars Carson City. Other bids, all taken under advisement, are: Ishell Const. Co., Carson City, \$41,137.75; Nevada Rock and Sand Co., Reno, \$44,367.63.

SAN FRANCISCO.—E. J. Treacy, Call Bldg., at \$3,962 awarded contract by Board of Public Works to construct sidewalks and walls in Grand View Ave. bet. north and south intersections with Market St.

MONTEREY, Monterey Co., Calif.—Until October 28, 7 P. M., bids will be received by Clyde A. Dorsey, city clerk, to lay brick paths and construct brick pavement in and over the recreational area in the Friendly Plaza, adjoining Colton Hall. City will pay 75% of the contract price upon completion of the work and the remaining 25% 35 days thereafter. Certified check 10% payable to city required with bid. Plans on file in office of the clerk.

MONTEREY, Monterey Co., Cal.—City council declares intention (3020) to construct 4-inch cement concrete sidewalks in Lighthouse Ave., between north line of U. S. Military Reservation and common boundary line between the city of Pacific Grove and the city of Monterey. 1911 Act Bond Act 1915. Hearing October 28. Clyde A. Dorsey, city clerk.

OFFICIAL PROPOSALS

October 10, 1930

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WORKS

DIVISION OF HIGHWAYS

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the State Highway Engineer, Public Works Building, Sacramento, California, until 2 o'clock P. M., on November 5, 1930, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

Kern County, near Wasco (VI-Ker-33-D), about two-tenths (0.2) mile in length, to be graded and paved with Portland cement concrete.

Proposal forms will be issued only to those contractors who have furnished a verified statement of experience and financial condition in accordance with the provisions of Chapter 641, Statutes of 1929, and whose statements so furnished are satisfactory to the Department of Public Works. Bids will not be accepted from a contractor to whom a proposal form has not been issued by the Department of Public Works.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office, and they may be seen at the offices of the District Engineers at

Los Angeles and San Francisco, and at the office of the District Engineer of the district in which the work is situated. The District Engineers' offices are located at Eureka, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the district office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention to prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS.

C. H. PURCELL,
State Highway Engineer.

tive of the Division of Highways. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the district office.

No bid will be received unless it is made on a blank form furnished by the State Highway Engineer. The special attention of prospective bidders is called to the "Proposal Requirements and Conditions" annexed to the blank form of proposal, for full directions as to bidding, etc.

The Department of Public Works reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

DEPARTMENT OF PUBLIC WORKS
DIVISION OF HIGHWAYS.

C. H. PURCELL,
State Highway Engineer.
Dated October 15, 1930.

PACIFIC ELECTRIC FILLING BIG TEXAS ORDER

During the past week the largest single shipment yet made by the Pacific Electric Manufacturing Company, consisting of six carloads of oil

circuit breakers manufactured in San Francisco, was shipped to Trinidad, Texas. Larger orders than this have been received by this fast growing San Francisco concern, but this 6-car load shipment is the largest made under any one order, according to Joseph Thompson, President, The Trinidad power house, which serves such cities as Dallas and Fort Worth, already had in use some of the San Francisco-made oil circuit breakers, and this large order confirms the satisfaction already given by this product.

ELECTRICAL INSPECTORS WILL MEET IN SACRAMENTO

The Southwestern Section, International Association of Electrical Inspectors, will hold its 1931 convention in Sacramento in October. It is expected that 200 delegates will attend the meeting.

Sacramento won the 1931 convention largely through the efforts of Carl Beaton, city electrician of Sacramento, who attended this year's convlave in Pasadena.
